

## Power Relay B

- Pin assignment similar to ISO 7588 part 1
- Plug-in terminals
- Customized versions on request
  - 24VDC versions with contact gap >0.8mm
  - Integrated components (e.g. resistor, diode)
  - Customized marking/color
  - Special covers (e.g. notches, release features, brackets)
  - Various contact arrangements and materials

F234\_fw1\_bw

### Typical applications

Cross carline up to 35A for example: rear window defogger, battery disconnection, power distribution (clamp 15)

Mechanical endurance		1x10 <sup>6</sup> ops.		

- 1) The values apply to a resistive or inductive load with suitable spark suppression and at maximum 14VDC for 12VDC or 28VDC for 24VDC load voltages. For a load current duration of maximum 3s for a make/break ratio of 1:10.
- 2) Current and time are compatible with circuit protection by a typical automotive fuse. Relay will make, carry and break the specified current.
- 3) See chapter Diagnostics of Relays in our Application Notes or consult the internet at <http://relays.te.com/appnotes/>
- 4) For unsuppressed relay coil. A low resistive suppression device in parallel to the relay coil increases the release time and reduces the lifetime caused by increased erosion and/or higher risk of contact tack welding.

6) Refers to used materials.

7) No change in the switching state >10µs. Valid for NC contacts, NO contact values significantly higher.

8) Values apply 2mm from the end of the terminal. When the force is removed, the terminal must not have moved by more than 0.3mm.
