## F48-750-C2

## Description:

The F48-750-C2 is a single primary and dual secondary, split bobbin design which operates with an input of 115 V . The secondaries are $24 \mathrm{~V} @ 0.75 \mathrm{~A}$ each. They can be used independently (up to 300 V difference between them) or in series for double the voltage or in parallel for double the current. The split bobbin design eliminates the need for costly electrostatic shielding.
