# Smooth motor control and energy savings

## What is an AC drive?

An AC drive is an electronic device that is used to adjust the rotating speed and torque of a standard, electric AC motor. The electric motor, in turn, drives a load such as a fan, pump or conveyor.

AC drives are also referred to as frequency converters, variable frequency drives (VFD), variable speed drives (VSD), adjustable frequency drives (AFD), adjustable speed drives (ASD) or inverters.

## What is a softstarter?

Softstarter is a full-speed starter that accelerates, decelerates and protects three phase motors. The softstarter controls the voltage

applied to the motor by using thyristors which gives it control over current, torque and acceleration. The softstarter's parameters can be configured to match the application's requirements, so that the required current and torque are optimized.

## ABB - global market and technology leader in AC drives

ABB ([www.abb.com](http://www.abb.com)) is a leader in power and automation technologies that enable utility and industry customers to improve their performance while lowering environmental impact. ABB is the world's largest drives manufacturer. ABB operates in more than 100 countries with about 110,000 employees.

---

Electric motors consume about 65% of all electricity used throughout industry. Yet, less than 10% of those motors are fitted with a variable speed drive or a softstarter.

Softstarters are ideal choice when an application requires speed and torque control only during startup. The softstarters prevent large inrush currents from being drawn while starting the motor by smoothly ramping up the supply voltage. The smooth ramp up prolongs the life

time of the motors because less current means also less heat in the motors. AC drives, on the other hand, are good choice when speed control only during a startup is not enough, big energy savings are a must, custom motor control is required, or more functionalities are needed.

## Improve your processes with softstarters and AC drives

- **Increased life time**  
Reduced starting current decreases the electrical stress on the motor and network. Smooth ramp up to full speed also reduces mechanical wear on the equipment prolonging its life time.
- **Increased productivity**  
Using softstarters and drives increases the productivity of the applications by reducing the number of unintended stops caused by excessive heating of the motor or sudden breakdowns of mechanical equipment due to high mechanical stress.
- **Reduced need for maintenance**  
Being able to apply a softer starting moment and vary the speed and torque of an electric motor means there is less wear and tear on the motor and the driven machine.

## Further optimize your processes with AC drives

- **Substantial energy savings**  
Rather than having an electric motor running continuously at full speed, an electric drive allows the user to slow down or speed up the motor depending on the demand.
- **Optimal process control**  
An electric drive enables the process to achieve the right speed and torque while maintaining its accuracy. This contributes to more consistent quality and throughput of the end product.
- **Efficient system upgrade**  
An AC drive allows the removal of valves, gears and belts. It also ensures network dimensioning based on a lower starting current.

## ABB drives and softstarters common features

- **Easy to select**  
You can be sure to find a right product for your application from a wide selection of ABB softstarters and AC drives.
- **Easy to purchase**  
ABB softstarters and drives are available from ABB and selected ABB partners. Please contact ABB for more details.
- **Easy to install**  
The softstarters and drives are simple to install, featuring a variety of mounting options from wall-mounted to cabinet mounted.
- **Easy to operate**  
Once installed and commissioned, the softstarters and drives are incredibly easy to operate. The user interface allows instant adjustments to speed or other more advanced parameters.

### Choosing between a drive and a softstarter

Identify the application	
1	Is it a full speed application, or a variable speed application?
2	Is speed and torque control during startups enough, or does the speed and torque need to be controlled also during run cycles?
3	Is smooth startup enough, or are energy savings sought?
<b>→ Choose a softstarter</b>	
<b>→ Choose an AC drive</b>	
Softstarters offer you a complete range of products for full speed applications. See the softstarter selection tool on the page 41, to select the softstarter for your needs.	
Variable speed drives offer you a right product for variable speed applications. See the drive selection tool on the page 6, to select the drive to match your needs.	

### Application examples:

Softstarters: pumps, compressors, fans, conveyors, bow thrusters, crushers etc.  
Variable speed drives: conveyors, fans, mixers, grinders, elevators, cranes, etc.

# Choosing the right drive for your application

Step	Process	Action
1	<b>Identify the application</b> Identify the type of application and the likely demands of the drive.	Continue to step 2.
2	<b>Gather the load data: system inertia, required acceleration and deceleration rates, minimum and maximum speeds, overload requirements, etc.</b> This information can often be determined by the performance of the existing motor.	Continue to step 3.
3	<b>Gather the motor data: rated torque, kW, volts, insulation class, speed, etc.</b> Whether an existing motor or a new motor is being used, the motor information is critical to choosing a drive.	Continue to step 4.
4	<b>Choose a drive</b> Match the data gathered in Steps 1 to 3 against the table of drive features on page 5. Select a drive that meets the motor requirements and has all the software features needed for the application.	Continue to step 5.
5	<b>Is the drive offered in the correct kW/amp rating?</b> The drive you choose must be able to supply the necessary current to the motor to produce the torque required. This includes normal and overload conditions. Select current from the tables on pages 10, 13, 16, 19, 22 or 25 depending on drive type selected.	If yes, continue to step 6. If no, go to step 4.
6	<b>Is the drive offered in the correct enclosure and environmental ratings?</b> The drive you choose must be available in an enclosure style that will withstand the application's environment. It also must produce the required current at the application's altitude and ambient temperature.	If yes, continue to step 7. If no, go to step 4.
7	<b>Does this drive have the features needed to meet the application's demands?</b> The drive you choose must have a feature set that matches the application. It also must have sufficient hardware (inputs and outputs, feedback, communications, etc.) to perform the application.	If yes, continue to step 8. If no, go to step 4.
8	<b>Does this drive have the motor control performance to meet the application's demands?</b> The drive you choose must be able to produce the needed torque at the necessary speeds. It must also be able to control speed and torque depending on the application requirements.	If yes, continue to step 9. If no, go to step 4.
9	<b>Congratulations!</b> The ABB AC drive you have chosen has the features and performance needed for a successful application.

# ABB general purpose drives

## ACS480, 0.75 to 22 kW

—  
01  
ACS480 frame sizes:  
R1, R2, R3, R4

### What is it?

The ACS480 is ready made package having all essential features built-in as standard, simplifying drive selection, and making additional hardware unnecessary. Straightforward settings menu and assistants enable fast setup, commissioning, use and maintenance.

With its cabinet optimized size and embedded features, ACS480 is a great fit for variable torque and basic speed applications, where easiness, reliability and efficiency matters. However, if more power or options are needed, ACS580 is a great choice.

—  
01

Feature	Advantage	Benefit
Control panel and Primary settings menu with multi-language support	Effortless commissioning, configuration, monitoring and defect tracking. No need to know parameters with the Primary settings menu.	Substantial time savings. Drive speaks your local language. No need for manual as the help function is already built-in to the panel.
Optimized for cabinet installations with unified height and depth.	Highest power density against most of the comparable products in the market. Multiple drives can be installed side-by-side.	Cost, space and time savings
All essentials built-in	Integrated C2 EMC filter, Safe torque off, brake chopper and Modbus RTU are built-in to simplify selection, ordering and installation	Reduces amount of external components and manual work. Standard drive available from central stock with simplified logistics and without need for extra configuration.
Energy efficiency functionality	Support for high efficiency motors enables best system efficiency. Built-in energy optimizer ensures maximum torque per ampere. And energy efficiency information help you monitor and save the energy used in your process.	Energy savings through improved energy management
Standard safety functions	Integrated, certified safety with SIL3/PL e safe torque off (STO), fulfilling the machinery directive.	Fulfills Machinery Directive 2006/42/EC, EN/ IEC 61800-5-2:2007. Cost-effective and certified solution for safe machine maintenance.

**Inputs and outputs**

The figure shows the ACS480 factory-set standard inputs and outputs. All inputs and outputs are freely programmable.

**The base unit includes:**

- 2 digital inputs
- 1 relay output
- Safe torque off (SIL3/PL e)

**The rest of the connections comes with the I/O module (RIIO-01):**

- 2 analog inputs
- 2 analog outputs
- 4 digital inputs
- 2 relay outputs

The standard delivery includes an I/O module. If a fieldbus adapter is needed, it is delivered instead of the I/O module. If the I/Os on the base unit are not enough when using a fieldbus adapter, an optional I/O extension (BIO-01) can be used underneath a fieldbus adapter.

# ABB general purpose drives

## ACS580, 0.75 to 500 kW

—  
01  
ACS580 frame sizes:  
R1 to R11

### What is it?

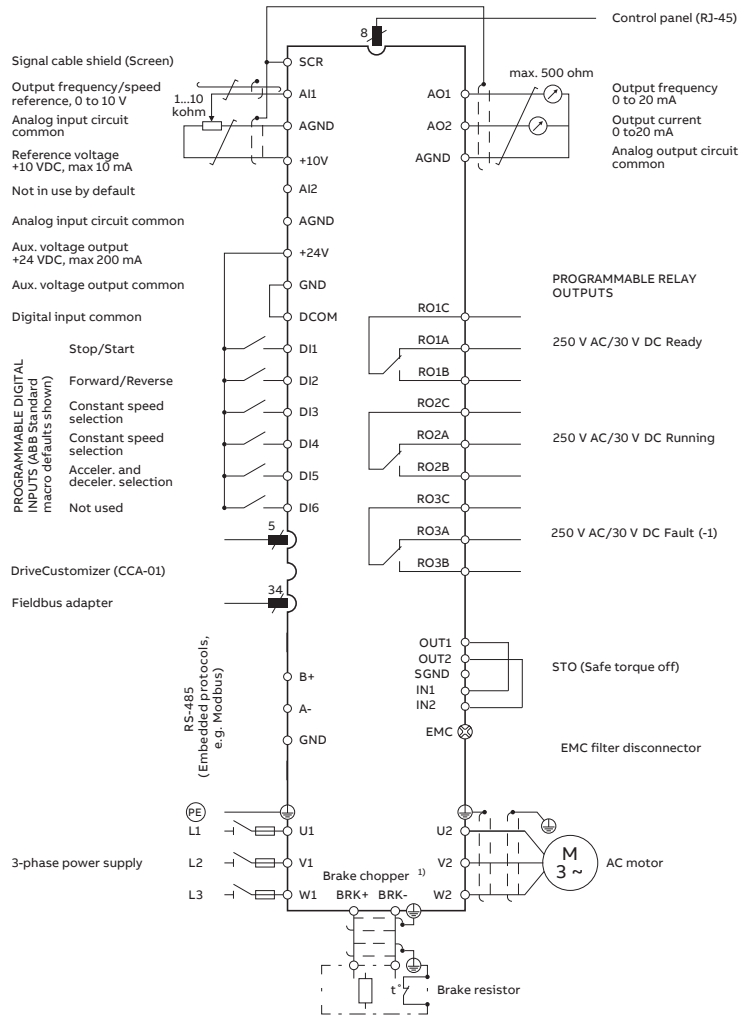

The ACS580 is plug-in ready to control your compressors, conveyors, pumps, mixers, fans and many other variable and constant torque applications. Most essential features are built-in as standard, simplifying drive selection, and making additional hardware unnecessary. Straightforward settings menu and assistants enable fast setup, commissioning, use and maintenance.

The ACS580 drive meets the requirements of drive users, installers, electricians, machine builders, system integrators and panel builders.

Feature	Advantage	Benefit
Control panel and Primary settings menu with multi-language support	Effortless commissioning, configuration, monitoring and defect tracking. No need to know parameters with the Primary settings menu.	Substantial time savings. Drive speaks your local language. No need for manual as the help function is already built-in to the panel.
Installation and commissioning	Highest power density against most of the comparable products in the market. Multiple drives can be installed side-by-side.	Cost, space and time savings
Connect to public low voltage networks	Integrated C2 EMC filter (1 <sup>st</sup> environment) for frame sizes R1 to R9 or C3 EMC filter (2 <sup>nd</sup> environment) for frame sizes R10 to R11 and swinging choke (compatible harmonics levels) as standard	Ensure that the product can be used on public installations and therefore no additional filters or engineering is required.
Energy efficiency functionality	The built-in energy efficiency calculators monitoring used and saved kWh, CO <sub>2</sub> reduction and money saved. The energy optimizer ensures the maximum torque per ampere. The wall-mounted drive fulfills the highest IE2 drive (EN 50598-2) energy efficiency class and is compatible with high-efficiency IE4 motors.	Energy savings through improved energy management
Standard safety functions	Integrated, certified safety with SIL3/PL e safe torque off (STO), fulfilling the machinery directive.	Fulfills Machinery Directive 2006/42/EC, EN/IEC 61800-5-2:2007. Cost-effective and certified solution for safe machine maintenance.

## ACS55, 0.18 to 2.2 kW

—  
01  
ACS55 frame  
sizes: A, B, C, D

### What is it?

The ACS55 drive is a component that can be integrated easily into existing panels, replacing contactors and motor starters. Its compact size is ideal for new installations or whenever speed control of AC induction motors is needed. For users new to drives, its interface with DIP switches and trimmers is exceptionally intuitive.

The ACS55 drive meets the requirements of new drive users, installers, machine builders and panel builders.

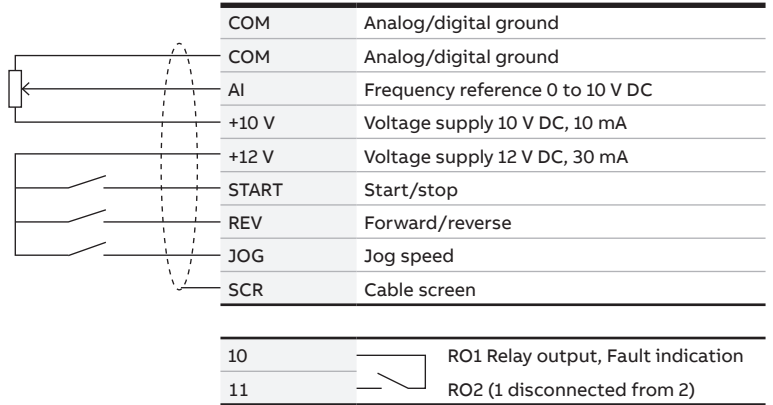

—  
01

Feature	Advantage	Benefit
Single phase supply	Suitable for single phase residential and commercial applications	Avoids cabling and installation costs associated with three-phase supplies
Slim design	Fits easily into a variety of cabinet designs	Cabinet size can be smaller or greater packing density can be achieved
Flexible installation alternatives	Screw or DIN rail mounting, sideways or side-by-side	One drive type can be used in various designs, saving installation costs and time
High switching frequency	Reduced motor noise	Does not disturb occupants of buildings
Integrated EMC filter as standard	High electromagnetic compatibility	Low EMC emissions in all environments
Easy configuration	Quick setup with DIP switches and trimmers	Substantial time savings. Minimal expertise needed.
DriveConfig kit PC tool	DriveConfig kit PC tool is used to set drive parameters and to upload the parameter set to a drive in seconds, even without a power connection to the drive. The DIP switches and trimmers on the front panel of the drive are disabled after using the DriveConfig kit. This prevents the end users from altering the drive configuration.	Time savings with multiple drives. Drive configuration protected from end user alterations.

**Inputs and outputs**

The figure shows the ACS55 factory-set standard inputs and outputs.

**Dimensions and weights**

0.37	2.2	68878390		ACS55-01N-02A2-1	A	

<sup>\*)</sup> The rated power and current values are valid for both pump and fan applications and heavy load applications.  
Examples of typical heavy load applications include most extruders and compressors.

For more technical information, see ACS55 catalog (3AFE68899842 EN) or ABB product guide (3AFE68401771 EN)

# ABB micro drives

## ACS150, 0.37 to 4 kW

—  
01  
ACS150 frame  
sizes: R0, R1, R2

### What is it?

The ACS150 drive is a component that is brought together with other components and includes, as standard, all necessary functions and interfaces for typical applications with AC induction motors. This makes the product selection very easy.

The ACS150 drive meets the requirements of new drive users, installers, machine builders and panel builders.

—  
01

Feature	Advantage	Benefit
User-friendly LCD control panel	Clear alphanumeric display Easy setup and use	Time savings
Flexible mounting alternatives	Screw or DIN rail mounting, sideways or side-by-side	One drive type can be used in various designs, saving installation costs and time
Integrated EMC filter	High electromagnetic compatibility	Low EMC emissions in selected environments
Built-in brake chopper as standard	No need for an external brake chopper	Space savings, reduced installation cost
Embedded potentiometer	Easy to adjust output frequency	Time savings
PID control	Simple integration to process control	Cost savings as a result of less cabling
FlashDrop tool	FlashDrop is a hand held tool that is used to quickly and easily set drive parameters. FlashDrop tool uploads drive parameters directly to unpowered drives. The tool can copy parameters from one drive to another or between a PC and a drive.	Time savings, especially with multiple drives

**Inputs and outputs**

The figure shows the ACS150 factory-set standard inputs and outputs. All inputs and outputs are freely programmable.

# ABB machinery drives

## ACS355, 0.37 to 22 kW

—  
01  
ACS355 frame sizes:  
R0, R1, R2, R3, R4 and  
IP66/IP67 variants

### What is it?

The ACS355 is designed to be the fastest drive in terms of installation, setting parameters and commissioning. The drive is user-friendly, yet provides a wide range of built-in technology such as the safe torque off functionality and sequence programming which reduce the need for additional control electronics. The product

offers options and diverse functionality to cater to the needs set for speed and torque control of AC induction and permanent magnet motors.

The ACS355 drive meets the requirements of new drive users, installers, machine builders, system integrators and panel builders.

01

### Dimensions and weights

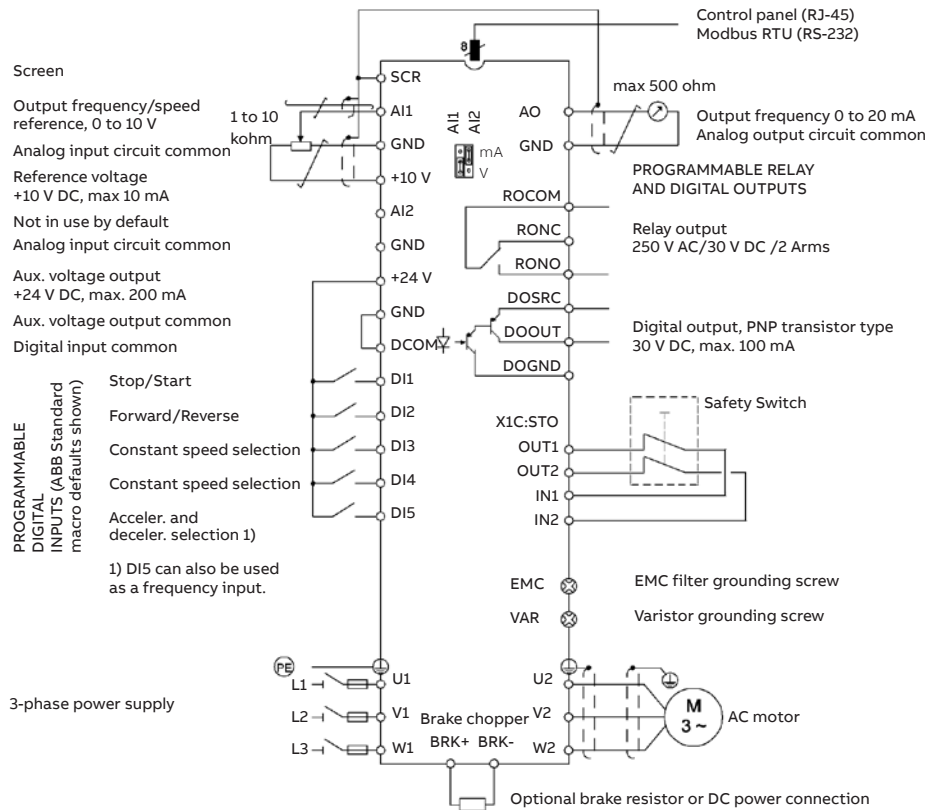

Frame size	IP20/UL open				IP66/IP67			
	H (mm)	W (mm)	D (mm)	Weight (kg)	H (mm)	W (mm)	D (mm)	Weight (kg)
R0	239	70	161	1.1	—	—	—	—
R1	239	70	161	1.3	305	195	281	7.7
R2	239	105	165	1.5	—	—	—	—
R3	236	169	169	2.5	436	246	277	13
R4	244	260	169	4.4	—	—	—	—

Feature	Advantage	Benefit
Same height and depth across power range	Effective space usage	Less engineering and installation time
Assistant control panel with Help functions	Quick setup, easy configuration and commissioning, rapid fault diagnosis	Substantial time savings locating faults and implementing repairs, thereby reducing maintenance costs
Scalar and vector control	Optimum performance depending on application	Ensures the end-product is produced cost efficiently
Sequence programming	Logic programming included as standard with PLC-like functions	Reduces components and wiring in control system
Integrated EMC filter	High electromagnetic compatibility	Low EMC emissions in selected environments
Built-in brake chopper as standard	No need for an external brake chopper	Space savings, reduced installation cost
Safe torque off function (SIL3) as standard	Built-in and certified function that is used for prevention of an unexpected startup and other stopping related functions	Reduces the need for external safety components. Helps machine builders to fulfill the requirements of Machinery Directive 2006/42/EC.
High protection class variant (IP66/67) up to 7.5 kW	No need to design special enclosure for applications that require high ingress protection	Time and cost savings
Product variant for solar pumps	Drive converts PV energy from solar panels to AC current, it can be operated independent from the grid.	Long life time and reduced maintenance costs, energy use and pollution. Improved reliability in electricity supply.
FlashDrop tool	FlashDrop is used to quickly and easily set drive parameters. FlashDrop tool uploads drive parameters directly to unpowered drives. The tool can copy parameters from one drive to another or between a PC and a drive.	Time savings, especially with multiple drives

**Inputs and outputs**

The figure shows the ACS355 factory-set standard inputs and outputs. All inputs and outputs are freely programmable.

# ABB general purpose drives

## ACS310, 0.37 to 22 kW

—  
01  
ACS310 frame sizes:  
R0, R1, R2, R3, R4

### What is it?

The ACS310 drive is designed for squared torque applications such as booster pumps and supply and return fans. The drive includes a powerful set of features which benefit pump and fan applications including built-in PID controllers and pump and fan control (PFC) that varies the

drive's performance in response to changes in pressure, flow or other external data.

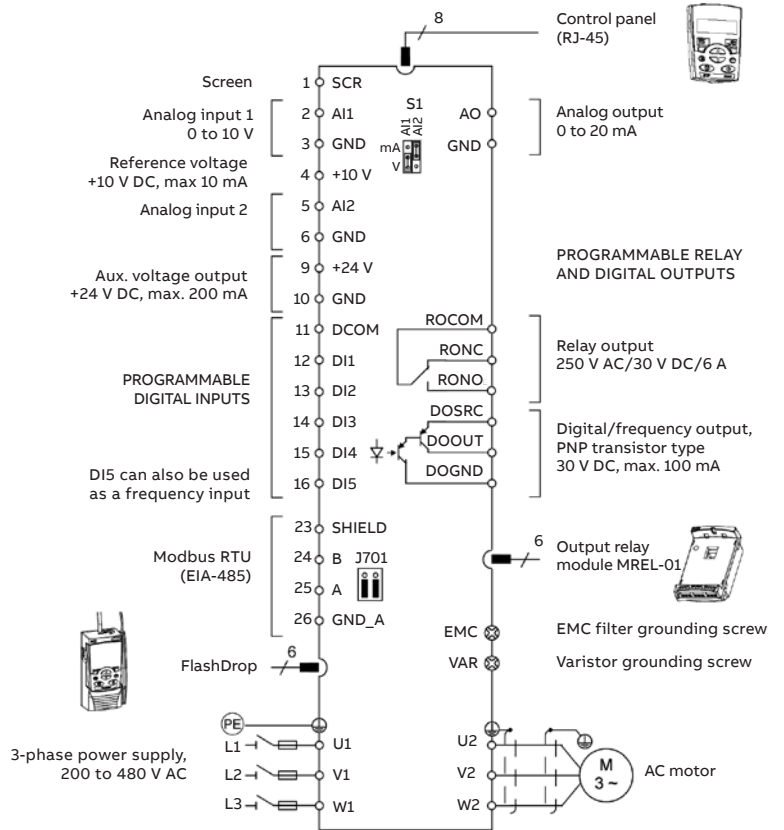

The ACS310 drive meets the requirements of new drive users, installers, machine builders, system integrators and panel builders.

—  
01

Feature	Advantage	Benefit
Same height and depth across power range	Effective space usage	Less engineering and installation time
Commissioning assistants	Easy set up of parameters for PID controllers, real-time clock, serial communication, drive optimizer and drive startup	Time savings. Ensures all required parameters are set.
Pump and fan control (PFC)	One drive controls several pumps or fans. Auxiliary motors are driven according to the needed pump/fan capacity. One motor can be disengaged from the mains supply while others continue operating in parallel.	Saves cost of additional drives and external PLC. Longer life for pump or fan system while reducing maintenance time and costs. Maintenance can be carried out safely without stopping the process.
Pump protection functions	Preprogrammed features such as pipe cleaning, pipefill, inlet/outlet pressure supervision and detection of under- or overload	Reduces maintenance costs. Longer life for pump and fan system.
PID controllers	Varies the drive's performance according to the need of the application	Enhances production output, stability and accuracy
Energy efficiency counters	Illustrates saved energy, CO <sub>2</sub> emissions and energy cost in local currency using a baseline determined from the energy consumed when the fan or pump is used directly online	Shows direct impact on energy bill and helps control operational expenditure (OPEX)
Embedded Modbus EIA-485 fieldbus interface	No need for external fieldbus options. Integrated and compact design.	Saves cost of an external fieldbus device. Increases reliability
FlashDrop tool	FlashDrop is a hand held tool that is used to quickly and easily set drive parameters. FlashDrop tool uploads drive parameters directly to unpowered drives. The tool can copy parameters from one drive to another or between a PC and a drive.	Time savings, especially with multiple drives

<b>Remote monitoring</b>						
	NETA-21	3AUA0000094517	Ethernet adapter with remote monitoring access can send process data, data logs and event messages independently, without a PLC or a dedicated on-site computer. It has an internal web server for configuration and drive access.		●	●
<b>Input/output extension module</b>						
	CMOD-01	3AXD50000004420	External 24 V AC and DC input 2 x RO and 1 x DO			●
	CMOD-02	3AXD50000004418	External 24 V AC and DC input and isolated PTC interface			●
	CHDI-01	3AXD50000004431	Six 115/230 V AC digital inputs and two relay outputs			●
	CBAI-01	3AXD50000137954	Bipolar analog I/O extension module			●
	CPTC-02	3axd50000033144	ATEX certified PTC interface and external 24 V			●
	BIO-01	3AXD50000191635	I/O extension module used together with a fieldbus module		●	
	BAPO-01	3AXD50000022164	Auxiliary power extension module External 24 V DC input		●	
	BREL-01	3AXD50000022162	Relay output extension module 4 x RO		●	
<b>Drive construction options</b>						
	IP20 shrouds for finger safe operation	+B051	Factory-made enclosure for the IP20 protection class on ACS580-04 drives			●
	Full-size input power cable terminals	+H370	For connecting the ACS580-04 drive to busbars or to multiple cables			●

<sup>1)</sup> One slot available for a fieldbus adapter. Modbus EIA-485 built-in as standard.

## ACS480 and 580 options

Type code	Electrical code/ ordering code	Price (Eur)	ACS480	ACS580
-----------	-----------------------------------	----------------	--------	--------

## Brake units

ACS580 frame sizes R1, R2 and R3 and ACS480 frame sizes R1, R2, R3 and R4 are delivered with an integrated brake chopper as standard. Other units can use external braking choppers and resistors or integrated braking chopper and resistor unit.

			Reference brake resistors are listed in the manuals. Make sure to dimension them correctly.	●	●
ACS-BRK-D	64102931		Integrated braking chopper and resistor. Resistor's resistance 10.5 ohm, continuous output power 7 kW, maximum output power for 20 s is 42 kW for 380 to 480 V units		●
NBRA-658	59006428		Braking chopper module. Maximum braking power depends on a braking cycle, drive's typecode and brake resistor. For further details, please refer to the hardware manual.		●
NBRA-659	59006436				●

## PC tools, configuration tools and adapters

Drive Composer entry	Download free from <a href="http://www.abb.com/drives">www.abb.com/drives</a>		Drive Composer PC tool for startup, configuration, monitoring and process tuning. PC tool is connected to the drive's control panel via USB interface.	●	●
DCPT-01 Drive Composer pro	3AUA0000108087 (1 user license) 3AUA0000145150 (10 users license) 3AUA0000145151 (20 users license)		Drive Composer pro provides the same standard functionality as the free version and some additional features, like graphic control diagrams. The tool has fast monitoring capabilities of multiple signals from several drives in the panel bus. Full backup and restore functions are also included.	●	●
CCA-01	3AXD50000019865		Cold configuration adapter provides serial communication interface to unpowered drives. This adapter ensures safety isolation of both serial communication and control board power supply. The power supply is taken from PC USB port.	●	●

ABB

The control panel features a monochrome LCD screen displaying the following information:

Remote	1147F01	16.8 Hz
Output frequency	16.78	Hz
Motor current	5.56	A
DC voltage	550.27	V
Options	1518	Menu

Below the screen is a control keypad with the following buttons:

- Stop (Red circle with a diagonal line)
- Loc/Rem (Lock/Release)
- Start (Green diamond)
- Navigation buttons: Up, Down, Left, Right, and a central button with a question mark.
- Two large grey arrow buttons above the keypad.
- A USB port at the bottom.

ABB

Partial view of another ABB drive control panel, showing the right side of the LCD screen and the Stop button.

## ACS55 and ACS150

ACS55 options			
	Type code	Electrical code/ ordering code	Price (Eur)
<b>Potentiometer</b>			
	ACS50-POT	68226716	Integrated potentiometer for adjusting the motor speed
<b>DriveConfig kit</b>			
	RFDT-02	68973988	PC tool for programming of ACS55 drives in larger quantities without the need for a power connection
ACS150 options			
	Type code	Electrical code/ ordering code	Price (Eur)
<b>NEMA 1 enclosure kit</b>			
	MUL1-R1	68566398	NEMA 1 enclosure kit for finger protection and for protection against dirt and dust, available for frame sizes R0 to R2
<b>EMC filters</b>			
	RFI-11	68902371	Compatibility with category C1 and C2, 1-phase, 0.37 kW
	RFI-12	68902401	Compatibility with category C1 and C2, 1-phase, 0.75 to 1.1 kW
	RFI-13	68902410	Compatibility with category C1 and C2, 1-phase, 1.5 to 2.2 kW
	RFI-32	68902495	Compatibility with category C1 and C2, 3-phase, 0.37 to 4.0 kW
<b>Low leakage current filters</b>			
	LRFI-31	3AUA0000050644	Low leakage current filters are ideal for installations where residual current devices (RCD) are required and leakage current needs to be below 30 mA
	LRFI-32	3AUA0000050645	
<b>PC tools and adapters</b>			
	MFDT-01	68566380	FlashDrop is a powerful palm sized tool for fast and easy parameter selecting and setting. It gives the possibility to hide selected parameters to protect the machine.

# Options

## ACS355

ACS355 options			
	Type code	Electrical code/ ordering code	Price (Eur)
<b>Potentiometer and control panels</b>			
	MPOT-01	68566282	Integrated potentiometer for adjusting the motor speed
			- Control panel cover, delivered with ACS355 drives as standard
	ACS-CP-C	64739000	Basic control panel with numeric display and large buttons
	ACS-CP-A	64691473	Assistant control panel with commissioning and diagnostic assistants. Features a multilingual display and a real-time clock.
	ACS/H-CP-EXT	68294673	Control panel mounting kit, enables mounting of the control panel on the cabinet door
	ACS/H-CP-EXT-IP66	68829593	Control panel mounting kit with IP66 enclosure, enables mounting of the control panel on the cabinet door
	OPMP-01	3AUA0000013086	Control panel holder mounting kit. Includes a panel platform that enables the panel to be removed in the same way as a drive-mounted panel.
<b>NEMA 1 enclosure kits</b>			
	MUL1-R1	68566398	NEMA 1 enclosure kit for finger protection and for protection against dirt and dust, available for frame sizes R0 to R2. Total height increases by 43 mm and depth by 8 mm.
	MUL1-R3	68566410	NEMA 1 enclosure kit for finger protection and for protection against dirt and dust, available for frame size R3. Total height increases by 63 mm and depth by 8 mm.
	MUL1-R4	3AUA0000023888	NEMA 1 enclosure kit for finger protection and for protection against dirt and dust, available for frame size R4. Total height increases by 76 mm and depth by 8 mm.
		B063	IP66/NEMA 4X enclosure Available up to 7.5 kW Has to be ordered together with ACS355 drive

ACS355 options			
	Type code	Electrical code/ ordering code	Price (Eur)
<b>Extension modules</b>			
	MTAC-01	68566355	Pulse encoder interface module
	MREL-01	3AUA0000031854	Relay output extension module. The optional MREL-01 module offers three additional relay outputs, which can be configured for different functions with parameters.
	MPOW-01	3AUA0000059808	Auxiliary power module
<b>Connection options</b>			
	Cable gland kit	Frame R1: 3AUA0000045483 Frame R3: 3AUA0000045484	Cable gland kit for the IP66/67 drive variant
	Input switch kit	F278	Input switch kit for the IP66/67 drive variant, factory installed variant
<b>Pressure compensation</b>			
	C169	3AUA0000045485	Pressure compensation valve for IP66/67 variant to prevent water condensation within the enclosure.
<b>Fieldbus adapter modules</b>			
	FCAN-01	68469376	CANopen® protocol
	FPBA-01	68469325	PROFIBUS DP protocol
	FDNA-01	68469341	DeviceNet™ protocol
	FMBA-01	68469881	EIA-485/Modbus RTU protocol
	FENA-01	68469422	Ethernet (EtherNet/IP, Modbus/TCP, PROFINET IO)
	FENA-21	3AUA0000089109	2-port Ethernet (EtherNet/IP, Modbus/TCP, PROFINET IO)
	FECA-01	3AUA0000072069	Ethernet/EtherCAT® protocol
	FCNA-01	3AUA0000094512	ControlNet protocol
	FEPL-02	3AUA0000072120	POWERLINK protocol
<b>Remote monitoring</b>			
	SREA-01	3AUA0000039179	Ethernet adapter with remote monitoring access can send process data, data logs and event messages independently, without a PLC or a dedicated on-site computer. It has an internal web server for configuration and drive access.
<b>Braking resistors</b>			
	CBR-V 160	68691770	Compatibility with 1-phase, 200 to 240 V, units up to 2.2 kW Compatibility with 3-phase, 200 to 240 V, units up to 2.2 kW
	CBR-V 210	68569311	Compatibility with 3-phase, 380 to 480 V, units up to 2.2 kW
	CBR-V 260	68691796	Compatibility with 3-phase, 200 to 240 V, units 3 and 4 kW
	CBR-V 460	68455685	Compatibility with 3-phase, 380 to 480 V, units from 3 to 7.5 kW
	CBR-V 660	68897921	Compatibility with 3-phase, 380 to 480 V, unit 11 kW
	CBT-H 560	3AUA0000023613	Compatibility with 3-phase, 200 to 240 V, units from 5.5 to 11 kW Compatibility with 3-phase, 380 to 480 V, units from 15 to 22 kW

# ABB softstarters

## How we are helping the industry

A softstarter from ABB offers you several values and benefits. Whether you are a consultant, OEM, panel builder or end-user, a softstarter will add to your business value by securing motor reliability, improving installation efficiency and increasing application productivity.

SECURE  
MOTOR  
**Reliability**

ABB softstarters help increase your motor's lifetime by protecting it from electrical stress. Starting currents are easily optimized to your load, application and motor size. Over ten motor protection features are included to keep your motor safe from different load and network irregularities.

IMPROVE  
INSTALLATION  
**Efficiency**

Reduce your installation time and panel size by having all features you need built into your softstarter. Our softstarters are easy to install thanks to their compact design and many built-in features. The built-in bypass saves energy and space while reducing heat generation. A complete motor starting solution in one unit.

INCREASE  
APPLICATION  
**Productivity**

Reduce the number of stops in your production by allowing your softstarter to do more than just starting. Our softstarters reduce the mechanical stress on your motor application, which will increase your uptime. Torque control, pump cleaning, motor brake and many other features enable you to operate your process at its full potential.

# ABB softstarters

## Selection tool

Step	Process
<b>1</b>	<b>Determine softstarter series</b> First, determine the softstarter series that fulfill the needs of the application and motor. Use the guide on the left to explore the three series and the power range each one covers.
<b>2</b>	<b>Match the softstarter size with the motor current</b> When the softstarter series is selected, the correct size should now be determined.  The selection of a softstarter is based on the current. Find the softstarter that corresponds to the motor current.
<b>3</b>	<b>Fine tune and select the correct size</b> The last step is to fine tune the selection, and there are three different factors to consider:  a. Normal or a heavy load: If the load is characterized as a heavy load, select the next size softstarter in the series. b. High ambient temperature c. High altitude  Use the equations below to find the correct de-rating equation for each softstarter type.

Note: If the application is more complicated and there are specific requirements on acceleration time, maximum starting current or many starts per hour, the software Prosoft should be used for a fine tuned selection. [Link](#)

For a more precise selection, use the online softstarter selection tool available by scanning the shown QR code or using the selection tool available on: [econfigure.xe.abb.com/global](http://econfigure.xe.abb.com/global)

Altitude formula	
De-rate for altitudes between 1000-4000 m or 3280-13123 ft with the following formula for all softstarters:	
In meters:	% of I <sub>e</sub> = 100 - (x-1000)/150
In feet:	% of FLA = 100 - (y-3280)/480
Where x/y is the actual altitude in m/ft	
Temperature formula	
PSTX and PSR	
In Celsius:	40...60 °C: Reduce I <sub>e</sub> with 0.8%/°C
In Fahrenheit:	104...140 °F: Reduce FLA with 0.44%/°F
PSE	
In Celsius:	40...60 °C: Reduce I <sub>e</sub> with 0.6%/°C
In Fahrenheit:	104...140 °F: Reduce FLA with 0.33%/°F
Typical applications	
Normal duty start	Heavy duty
Bow thrusters	Centrifugal fan
Compressors	Crusher
Elevator	Mixer
Centrifugal pump	Conveyor belt (long)
Conveyor belt (short)	Mill
Escalators	Stirrer

PSTX – the advanced range
<ul style="list-style-type: none"> <li>When full control and motor protection is needed</li> <li>When an advanced softstarter with an extensive functionality is needed</li> <li>When motor is connected inside delta or in 690 V</li> </ul>
PSE – the efficient range

# ABB softstarters

## PSR – The compact range

### Technical data

- Operational voltage: 208...600 V AC
- Wide rated control supply voltage: 100...240 V AC, 50/60 Hz or 24 V AC/DC
- Rated operational current: 3...105 A
- Two-phase controlled
- Soft start with voltage ramp
- Soft stop with voltage ramp
- Built-in bypass for energy saving and easy installation
- Easy setup by three potentiometers
- Fieldbus communication with fieldbus plug adaptor and the FieldBusPlug

- Run and Top of Ramp relays available for monitoring
- Connection kits available for connection to ABB's manual motor starters (MMS)

### Available communication protocols:

- Modbus RTU
- PROFIBUS
- DeviceNet

### Certifications and approvals:

- CE, cULus, CCC, EAC, ANCE, C-tick, KC

### Reduce the electrical stresses and keep the motor protected with the MMS

The PSR reduces the starting current for the motor. The possibility to connect it to the manual motor starter makes it possible to build a compact and complete starting solution with overload and short-circuit protection.

### Saving time and money with built-in bypass and easy set-up

On the PSR, the bypass is built in and verified by ABB, saving you time during installation and space in your panel. Set-up is done through three potentiometers making it very fast and easy.

### Reduce the mechanical stresses on your motor

Soft start and stop with PSR will reduce mechanical wear and tear on the application and increase the availability and uptime.

### PSR Dimensions and weight

Frame size	H (mm)	W (mm)	D (mm)	Weight (kg)	Weight (lb)
PSR3...16	140	45	113.5	0.45	0.99
PSR25...30	160	45	128	0.60	1.43
PSR37...45	187	54	153	1.0	2.20
PSR60...105	220	70	180	2.27	5.0

# ABB softstarters

## PSE – The efficient range

**Technical data**

- Operational voltage: 208...600 V AC
- Wide rated control supply voltage: 100...250 V AC, 50/60 Hz
- Rated operational current: 18...370 A
- Two-phase controlled
- Voltage ramp and torque control for both start and stop
- Current limit
- Kick-start
- Built-in bypass for energy saving and easy installation
- Coated PCBA protecting from dust, moist and corrosive atmosphere
- Illuminated display that uses symbols to become language neutral
- External keypad rated IP66 (Type 1, 4X,12) as an option

- Built-in Modbus RTU for monitoring and control
- Analog output for display of motor current
- Electronic overload protection
- Underload protection
- Locked rotor protection

**Available communication protocols:**

- Built-in: Modbus RTU
- Fieldbus plug (optional): PROFIBUS, DeviceNet, Modbus TCP

**Certifications and approvals:**

- CE, cULus, CCC, EAC, ANCE, C-tick, ABS, DNV GL, Lloyd's Register, CCS, PRS, Class NK, KC

**Basic motor protection and current limit**

The PSE includes the most important protections for handling different load situations that can happen to pumps e.g. overload and underload. The current limit gives you more control of the motor during start and allows you to start your motor in weaker networks.

**Saving time and money with built-in bypass and compact design**

On the PSE, the bypass is built in and verified by ABB, saving you time during installation and space in your panel. The keypad is language neutral and illuminated for easy set-up and operation in field. The compact design makes installation fast and easy.

**Torque control for elimination of water hammering in pumps**

Torque control is the most efficient way to stop a full speed pump. The PSE has a special torque stop ramp that is designed together with a pump manufacturer to eliminate water hammering in an optimal way.

**PSE Dimensions and weight**

Frame size	H (mm)	W (mm)	D (mm)	Weight (kg)	Weight (lb)
PSE18...60	245	90	185.5	2.4	5.3

# ABB softstarters

## PSTX – The advanced range

### Technical data

- Operational voltage: 208...690 VAC
- Wide rated control supply voltage: 100...250 V, 50/60 Hz
- PSTX rated operational current: 30...1250 A (inside-delta: 2160 A)
- Three-phase controlled
- Both in-line and inside-delta connection
- Coated circuit boards protecting from dust, moist and corrosive atmosphere
- Detachable keypad rated IP66 (Type 1, 4X,12)
- Graphical display with 17 languages for easy setup and operation
- Built-in bypass for energy saving and easy installation
- Built-in Modbus RTU for monitoring and control

- Support for all major communication protocols
- Analog output for measurement of current, voltage, power factor etc.

### Available communication protocols:

- Built-in: Modbus RTU
- Anybus (optional): Modbus RTU, PROFIBUS DP, DeviceNet, EtherNet IP, PROFINET, Modbus TCP, BACnet, EtherCAT
- Fieldbus plug (optional): PROFIBUS, DeviceNet, Modbus RTU

### Certifications and approvals:

- CE, cULus, CCC, EAC, ANCE, C-tick, ABS, DNV GL, Lloyd's Register, CCS, PRS, Class NK, KC

### Complete motor protection

The PSTX offers complete motor protection in only one unit and is able to handle both load and network irregularities. PT-100, earth fault protection and over/under voltage protection along with many other functions keep your motor safer than ever.

### Built-in bypass saves time and energy

When reaching full speed, the PSTX will activate its bypass. This saves energy while reducing the softstarter's heat generation. On the PSTX, the bypass is built in and verified by ABB, saving you time during installation and space in your panel.

### Complete control of pumps

Time to use your processes to their full potential. The PSTX features many application enhancing features, including torque control: the most efficient way to start and stop pumps. The pump cleaning feature can reverse pump flow and clean out pipes, securing uptime of your pump system.

# Introducing the most extensive drives and softstarters portfolio in the world

## **ABB low voltage AC drives**

The ABB low voltage AC drives product range, from 0.18 to 5600 kW, is the widest available from any manufacturer. These drives are the global benchmark that signifies reliability, simplicity, flexibility and ingenuity throughout the entire life cycle of the drive.

Several ABB drives feature calculators that provide energy consumption data. This information can be used to further analyze and tune a process for even greater energy savings.

The portfolio is supported by a selection of PC tools, fieldbus and communication options.

## **ABB micro drives**

ABB micro drives are suitable for many low power applications such as pumps, fans and conveyors. The focus in our design has been the easy integration into machines, which provides flexible mounting alternatives and straightforward commissioning.

## **ABB general purpose drives**

ABB general purpose drives are ideal in those situations where there is a need for simplicity to install, commission and use. They are designed to control a wide range of standard drives applications, including pump, fan and constant torque use, such as conveyors.

**ABB machinery drives**

ABB machinery drives can be configured to meet the precise needs of industries and order-based configuration is an integral part of the offering. Covering a wide power and voltage range with standard and optional features, the drives are readily programmable, making their adaptation to different applications easy.

**ABB motion control products**

ABB offers an extensive range of complete machine control solutions for diverse industrial applications such as labeling, packaging, bottling, pick and place, laser cutting/trimming, stacking, cut-to-length, flying shear, web feeders and high speed rotary wrappers.

**ABB industrial drives**

The ABB industrial drive portfolio is designed for heavy industrial applications such as those found in pulp and paper, metals, mining, cement, power, chemical, oil and gas, water and wastewater and food and beverage. Drives adapted and approved for use in the marine environment are also included within this portfolio.

**Industry specific drives**

Our industry specific ABB drives provide our customers with dedicated drive solutions for AC motor control used in industries such as HVAC and water and wastewater. Working closely with these industries, we have developed targeted functionality to help you improve your overall operating performance while also helping to reduce energy use. Built-in application macros in the drives help you easily set up and tailor processes.

**ABB DC drives**

ABB's DC drive portfolio, from 9 to 18000 kW, provides the highest power-to-size ratio on the market. The drives are designed for most industries including metals, cement, mining, pulp and paper, printing, food and beverage, wire manufacturing, test rigs, ski lift and cranes. ABB DC drives are available as complete cabinets, modules for cabinet assembly, and as retrofit kits. With built-in field exciters and integrated PLC's, they are the best DC drives choice for all new and retrofit applications.

**ABB softstarters**

A softstarter is the optimal compromise between a direct on-line or star delta starter and an advanced variable speed drive in many motor applications. Like direct on-line or star delta starters, it is used in full-speed applications. Like variable speed drives, it can perform soft starts and stops.

# We keep your world turning

Whatever your needs are, we offer the most extensive service offering for drives, motors and generators from spare parts and technical support to cloud-based condition monitoring solutions to keep your equipment running.

The global ABB service units complemented by external Value Providers form a service network on your doorstep. Maximize performance, uptime and efficiency throughout the life cycle of your assets.

### With you every step of the way

Even before you buy a generator, drive, motor, bearing or softstarter, ABB's experts are on hand to offer technical advice from dimensioning through to potential energy saving.

When you've decided on the right product, ABB and its global network of Value Providers can help with installation and commissioning. They are also on hand to support you throughout the operation and maintenance phases of the products life cycle, providing maintenance programs tailored to your facility's needs.

ABB will ensure you are aware of any service opportunities. If you've registered your drives and motors with ABB, then its engineers will proactively contact you advising on your most effective service options. All of which helps maximize performance, uptime and efficiency throughout the lifetime of your powertrain.

**Replacements**  
Fast and efficient replacement services to minimize production downtime.

**End-of-life services**  
Responsible dismantling, recycling and reusing of products, according to local laws and industrial standards.

**Maintenance**  
Systematic and organized maintenance and support over the life cycle of your assets.

**Advanced services**  
Gain the unique ABB Ability™ digital advantage through data collection and analytics with advanced services.

**Extensions, upgrades & retrofits**  
Up-to-date systems and devices with the best possible performance level.

**Engineering & consulting**  
Ways to identify and improve the reliability, usability, maintainability and safety of your production processes.

**Spares & consumables**  
Authentic, high-quality ABB spares and consumables with quick delivery.

**Technical support & repairs**  
Quick and accurate response during emergencies and efficient support during planned production breaks.

**Installation & commissioning**  
Highly-trained and reliable installation and commissioning experts at your service.

**Training**  
Comprehensive and professional training either at ABB premises or your own.

**Agreements**  
Comprehensive bundling of relevant services into one contract to suit your needs.

### Global service network 24/7

—  
“I need operational excellence, rapid response, improved performance and life cycle management.”

# A lifetime of peak performance

You're in control of every phase of the life of your drive. At the heart of drive services is a four-phase product life cycle management model. This model defines the services recommended and available throughout your drive's lifespan.

Now it's easy for you to see the exact service and maintenance available for your drives.

**ABB drives life cycle phases explained:**

Full range of life cycle services and support

Limited range of life cycle services and support

Replacement and end-of-life services

<b>Product</b>	Product is in active sales and manufacturing phase.	Serial production has ceased. Product may be available for plant extensions, as a spare part or for installed base renewal.	Product is no longer available.	Product is no longer available.
	<b>Services</b>	Full range of life cycle services is available. Product enhancements may be available through upgrade and retrofit solutions.	Limited range of life cycle services is available. Spare parts availability is limited to available stock.	Replacement and end-of-life services are available.

**Keeping you informed**

We notify you every step of the way using life cycle status statements and announcements.

The benefit for you is clear information about the status of your drives and the exact services available. It helps you plan the preferred service actions ahead of time and make sure that continuous support is always available.

**Step 1**

**Life Cycle Status Announcement**

Provides early information about the upcoming life cycle phase change and how it affects the availability of services.

**Step 2**

**Life Cycle Status Statement**

Provides information about the drive's current life cycle status, the availability of product and services, the life cycle plan, and recommended actions.
