## OC10...25 Amperes

### CamWeb2 – Best configuration tool It's powerful, it's fast, it's user-friendly

Configuration tool CamWeb2 is designed to allow customers to custom-configure cam switches according to their needs.

### High performance cam switches

- New patent-pending contact design guarantees consistent opening times between moving and fixed contacts. This results in higher current performances and a longer life span.
- Gold-plated contacts are available, for reliable low voltage switching
- High quality, flame-resistant materials

- Laser-printed text for life-long visibility, even in harsh environments
- Configurable switch body offers horizontal or vertical access to terminals

### Designed for safety

- Finger-proof tunnel terminals with IP20 protection eliminate the risk of touching live parts without adding any protective covers. This ensures safe operation, protecting people and equipment.
- Versatile selection of high protection degree handles. The standard handle is IP66. There are also handles available with increased protection up to IP67. See pages 6...9 for more details.

### Versatile mounting options

Door Mounting available in 2 versions

- Screw Mounting: multiple fixing points with screws.
- Snap-on Mounting: quick and easy installation which can reduce labor time by up to 5 times.

Base Mounting versions are equipped with features that allow screw or DIN rail mounting.

### ABB's complete offering

ABB offers a wide variety of switches, breakers, control gear, wiring accessories, DIN-rail components and much more

- ▶ A wide range of LV products available from one supplier

# Customized cam switches

## Design your own cam switch with CamWeb2

### CamWeb2 – Best configuration tool It's powerful, it's fast, it's user-friendly

Configuration tool CamWeb2 is designed to allow customers to custom-configure cam switches according their needs.

- Configuration of non-standard switches
- No need to do specifications manually
- Browser application, no installed software needed
- With a broad selection of accessories and contact configurations in CamWeb2, there is always a switch suitable for your application

► Custom-made cam switches designed specifically for you

### How to use it?

- 1 Go to <https://camweb2.com> and login
- 2 Select ampere, poles and handle type
- 3 Select angle system and design front plate
- 4 Specify contacts
- 5 Make jumper connection
- 6 Save and Send
- 7 Information output

# Standard and customized cam switches OC

## Versatile handle selection

Suitable Standard handle types according to the ordering code configuration tables. Special handles, gang drive and additional lettering plate selection configurable with Cam-Web2.

### Nose handles (\_N or \_M)

Nose handles have a degree of protection IP66. Door mounted versions can be snap-on or screw mounted. Snap-on mounted switches are suitable for 22.5 mm door drilling and screw mounted switches have a two (OC10) or four (OC25) hole mounting pattern. For base mounting, the handle can be fixed directly on the switch or on the enclosure door via shaft.

The standard front plate sizes are 32x32 mm for OC10 and 51x51 mm for OC25. Nose handles are available in black or gray color.

### Extended nose handle (\_E or \_F)

Extended nose handles are available only for OC25 switches and are available in black or gray color. The handle has IP66 protection.

Extended nose handles can be snap-on or screw mounted. For base mounting, the handle can be fixed directly on the switch or on the enclosure door via shaft. Snap-on mounted switches are suitable for 22.5 mm door drilling and screw mounted switches are mounted with a four hole pattern. The standard front plate size is 51x51 mm.

### Nose handle, round front ring (PX)

The round front ring replaces the square escutcheon plate with legend. These types of handles are used in applications where position indication or engraving is not needed on the switch.

Round front ring handles are available in black and gray colors and have a degree of protection IP66. The ring diameters are 32 mm for OC10 and 39 mm for OC25. These handles are snap-on mounted, which are for use with 22.5 mm door drilling.

### Key operated switches (K\_)

The switches are operated with a key instead of a handle. The degree of protection is IP54. Key operation is available with 60° spacing, starting at 0° and onwards. They are also available with 90° spacings, starting at 0° and onwards. It is possible to identify the positions for key removal in CamWeb2 or standard key-operated switches have the possibility to remove the key in all positions. Key operated switches are available only with snap-on mounting, which is for use in a 22.5 mm mounting hole. The standard front plate sizes are 32x32 mm for OC10 and 51x51 mm for OC25.

### Key operated switches, round front ring (KX)

The switches are operated with a key instead of a handle and the round front ring replaces the square escutcheon plate with legend. These types of handles are used in applications where position indication or engraving is not needed on the switch. There are round front rings in black and gray color, with a diameter of 30 mm (OC10) and 39 mm (OC25). The degree of protection is IP54.

# Standard and customized cam switches OC

## Versatile handle selection

### Modular switch handle with front cover (MN)

This handle is available only for base-mounted OC25 switches and the handle is mounted directly to the switch. It is light gray and the degree of protection is IP20. The handle can be used with standard 45 mm door or cover cutouts and is suitable for 35 mm dinrail mounting. If 6 contacts or less are used, the switch depth is consistent with other standard 45 mm components, such as miniature circuit breakers.

### Padlockable nose handle ( \_1 )

Padlockable nose handles are available for OC25 switches and replace the standard nose handle. They can be snap-on (22.5 mm hole) or screw mounted (four hole pattern) and are suitable for use with door or base mounted versions. The handles are available in black, gray or red-yellow. If the red-yellow version is selected, the handle will be red and the legend plate will be yellow. They can be used with up to 2 padlocks. Padlocking is possible every 45° and the padlockable positions can be specified in CamWeb2. The degree of protection is IP66.

### Extended padlockable nose handle ( \_2 )

Extended padlockable nose handles are available for OC25 switches and replace the standard nose handle. They can be snap-on (22.5 mm hole) or screw mounted (four hole pattern) and are suitable for use with door or base mounted versions. The handles are available in black, gray or red-yellow. If the red-yellow version is selected, the handle will be red and the legend plate will be yellow. They can be used with up to 3 padlocks. Padlocking is possible every 45° and the padlockable positions can be specified in CamWeb2. The standard legend plate size with this option is 66x66 mm and the degree of protection is IP66.

### Round padlockable handle ( \_3 )

Round padlockable handles are available for OC25 switches and replace the standard nose handle. They can be snap-on (22.5 mm hole) or screw mounted (four hole pattern) and are suitable for use with door or base mounted versions. These handles are available for use with On-Off switches and allow the switch to be padlocked in the OFF position.

The handles are available in black, gray or red-yellow. They can be used with up to 3 padlocks. The degree of protection is IP67.

### Key interlocked nose handle (QN)

Key interlocked handles are available on the OC25 with screw mounting and require an additional clearance hole for the lock. The operation of the cam switch is interlocked with a cylinder lock that is available to be located to the right or below the switch handle. The key can be removed in the lockable positions, which can be configured with 30° or 45° spacings in CamWeb2. The standard legend plate size with this option is 51x51 mm and the degree of protection is IP65.

### Key interlocked extended nose handle (QM)

Key interlocked handles are available on the OC25 with screw mounting and require an additional clearance hole for the lock. The operation of the cam switch is interlocked with a cylinder lock that is available to be located to the right or below the switch handle. The key can be removed in the lockable positions, which can be configured with 30° or 45° spacings in CamWeb2. The standard legend plate size with this option is 66x66 mm and the degree of protection is IP65.

# Standard and customized cam switches OC

## Versatile handle selection

### Double or triple gang drive

These options are available for OC25 and allow a larger number of contacts to be used: up to 2x24 contacts for double (tandem) and up to 3x24 contacts for triple gang drive.

Double or triple gang drive switches include an extended nose handle or have the option of an extended padlockable nose handle. The switches can be screw mounted on door or base mounted. For base mounting, the handle is fixed directly on the switch. The front plate size is 66X66 mm and the degree of protection is IP66.

### Spring return

The spring return movement is available with 30° spacing between momentary and maintained positions.

### Gold contacts ( \_ G \_ )

Available for all OC switches. Gold contacts are recommended for low energy applications, especially for circuits with 12 Vdc and 10 mA or less.

### Front Plate Options

The standard front plates are 32x32 mm for OC10 and 51x51 mm for OC25. Larger front plates (66X66 mm) are available for OC25 switches ( \_2 ). It is also possible to include an additional front plate at the top of the OC10 and OC25 switches in order to identify a switch name. The text that should be included on the additional front plates can be specified in CamWeb2.

# Standard and customized cam switches OC

## How to read contact diagrams

### Symbol key

 Contact closed

 Contact closed without interruption between switch positions

 Contact closed with interruption between switch position

 Early make, late break contact

 Spring return

### Example

Switch with 3 positions and 2 contacts. Spring return option between "START" and "1".

There is a jumper installed between terminals 1 and 3

No contacts are closed in the position "0"

Contact 1-2 is closed in position "1"

Contact 1-2 remains closed when moving switch to "START" position. Contact 3-4 also closes when switch is in "START" position.

The switch will automatically spring return from "START" to "1".

## Lockable handles, OC25

### Padlockable

Handle type, suitable for OC25	Option**	Protection degree	Size [mm/in]		
			W	H	A
Padlockable nose handle snap-on mounted	P1, B1, D1	IP66	51/2,01	34/1,34	
Padlockable nose handle screw mounted	R1	IP66	51/2,01	34/1,34	36/1,42
Padlockable extended handle snap-on mounted	P2, B2, D2, C2	IP66	66/2,60	46/1,81	
Padlockable extended handle screw mounted	R2	IP66	66/2,60	46/1,81	48/1,89

\*\* Option for position 3 in order code

### Round padlockable screw mounted

Handle type, suitable for OC25	Option**	Protection degree	Size [mm/in]	
			W	H
Round padlockable handle	R3	IP67	66/2,60	35/1,38

\*\* Option for position 3 in order code

# Dimension drawings

## Lockable handles, OC25

### Round padlockable handle, snap-on mounted

Handle type, suitable for OC25	Option**	Protection degree	Size [mm/in]	
			W	H <sub>1</sub>
Round padlockable handle	P3, B3	IP67	66/2,60	35/1,38

\*\* Option for position 3 in order code

### Key interlocked handle, screw mounted

Key interlocked nose handle

Handle type, suitable for OC25	Option**	Protection degree	Size [mm/in]			
			W	L <sub>1</sub>	H <sub>1</sub>	H <sub>2</sub>
Key interlocked handle	QN	IP65	51/2,01	85/3,35	28/1,10	27/1,06
Key interlocked handle, large front plate	QM	IP65	66/2,60	93/3,66	32/1,26	27/1,06

\*\* Option for position 3 in order code
