1. Overview of the XC112/XR112 Evaluation Kit

1.1 Introduction

The XC112/XR112 Evaluation Kit (The EVK) is a development platform featuring Acconeer's A111. This is an optimized low-power, high-precision 60 GHz radar in one package solution with integrated Baseband, RF front-end and Antenna.

The A111 is based on pulsed coherent radar technology (PCR). It has leading-edge patented sensor technology with pico-second time resolution. The A111 sets a new benchmark as far as power consumption and distance accuracy are concerned and it comes fully integrated in a small package of 29 mm^2.
The A111 can measure absolute distance with mm accuracy up to a range of 2m with a continuous sweep update frequency of up to 1500 Hz.

The A111, 60 GHz radar is not compromised by any natural source of interference such as noise, dust, color, direct or indirect light.

The EVK consists of

- 1 XC112 connector board with the possibility to connect up to four radar sensor boards.
- 1 XR112 which is Acconeer's sensor board featuring A111. A 400mm long FFC for connecting XC112 and XR112 is included with the XR112 as of February 1st, 2019. For XR112 sold before this date, a 203.2mm long FFC, Molex 15020-0175 was included with the XR112.

The EVK does not contain any processor or micro controller. It is designed for use with a Raspberry Pi 3.

1.2 Getting Started

A Quick Installation Guide is available at https://youtu.be/VLswgP2HFJg

This short instruction video will ensure a smooth setup and installation. For more information on retrieving the Acconeer SW, please refer to the next chapter.

2022-08-25

2. Software for the EVK

2.1 SW download

The SW is available for downloading at https://www.acconeer.com/products

2.2 SW API Description

The Acconeer SW comes with an API (Application Programming Interface). Acconeer provides several service oriented example applications, as well as customer guidelines for application development when utilizing the API. All APIs provided by Acconeer are documented.

Open the SW zip file downloaded from Acconeer's download site. In the file structure, please locate /doc.

doc/ contains API documentation in HTML format – simply open doc/html/index.html.

3. The EVK Hardware

Figure 1 shows the block diagram for the EVK

3.1 XC112 Connector Board

The XC112 is Acconeer's connector board and part of the EVK.

3.1.1   Overview

Picture 1 shows the XC112 connector board, front side with a Raspberry Pi connected.
Picture 2 shows the reverse side of the XC112.
3.1.2   Power

The Evaluation Kit is powered through the Raspberry Pi. When the power LED on the Raspberry Pi is lit, the connector board is powered on and ready for use.

3.3   Lens Evaluation Kit LH112

3.3.1   Overview

The LH112 lens evaluation kit is an accessory for the XR112/XC112 evaluation kit. The lenses can be used to increase sensor performance. The lenses increase signal strength by focusing the beam width of the radiated EM-waves and thereby concentrating the emitted power. The lens kit is sold separately from XR112 and XC112.

3.3.2   Contents and assembly

The LH112 lens kit is delivered including 4 parts. The included items are (as shown in picture below):

1.   Lens and PCB holder
2.   HBL Lens (Hyperbolic Lens)
3.   FZP Lens (Fresnel Zone Plate)
4.   Flat cover
The XR112 can be mounted directly to the lens and PCB holder. Make sure that the sensor is mounted correctly as the exact sensor position in relation to the lens is important for optimal performance.

The pictures below show XR112 mounted in the PCB holder from below and above:

2022-08-25
Both lenses can be fitted in the holder in two different positions, D1 or D2. The cover is only used in the D1 position. The two positions will give you slightly different performance. Performance results can be found in the next section. The pictures below show the difference between positions D1 and D2:
3.3.3   Performance

The transmitted electromagnetic waves from the Acconeer sensor has different divergence for the E-plane and H-plane. When mounted in front of the sensor the lenses affect the signal strength as well as the spread of the signal.
The expected performance for maximum gain and half power beam width (HPBW) can be found in the table below.

	Max Gain. (dB$_{FS}$)		HPBW-E (degree)		HPBW-H (degree)	
Free Space	0		40		63	
Cover	-0.15		40		63	
Lens Position	D1	D2	D1	D2	D1	D2
HBL	5.4	9.5	15	12	20	12
FZP	5.6	8.5	25	12	12	10

* The dB$_{FS}$ gain is the radar loop gain (Tx + Rx gain) relative to a free-space measurement.

2022-08-25

4 Design considerations

The EVK was designed for sensor evaluation purposes only. Should you want to design a product, it is strongly recommended to carefully read and follow the A111 data sheet. The Evaluation Kit is not optimized for product development.

2022-08-25

5 Safety

5.1   Electrostatic precautions

Please take electrostatic precautions, including using ground straps, when using the EVK or any of its components. An electrostatic discharge could damage the device.

2022-08-25

6 Regulatory Information

Acconeer have no plans to certify the XC112/XR112 EVK, it is only for evaluation purposes.
Regulatory Compliance for A111, refer to A111 datasheet.

7   Revision History

Date	Revision	Changes
2018-08-14	1.0	Original version
2019-02-04	1.1	Updated information about FFC in chapter 1.1.
2019-11-25	1.2	Added information regarding LH112
2021-04-21	1.3	ISO 14001 updates
2021-10-04	1.4	
2022-08-25	1.5	Updated chapter "Regulatory Information".
