Luckylight

3.0*3.0mm (1.2") 8×8 Super Amber Dot Matrix LED Displays Technical Data Sheet

Model No.: KWM-R30881XUAB

Features:

- ◇ 1.2inch (31.7mm) Matrix height.
- ◇ Colors:Super Amber.
- ◇ Flat package and light weight.
- ◇ Easy assembly.
- ◇ High quality and low cost.
- ◇ High reliable and intensity.
- ◇ Low power requirement.
- ◇ The product itself will remain within RoHS compliant version.

Descriptions:

◇The KWM-R30881 series is a large emitting area (3.0*3.0mm) LED sources configured in a 64 dots 8*8 matrix array.

◇These devices are made with white dots and black surface.

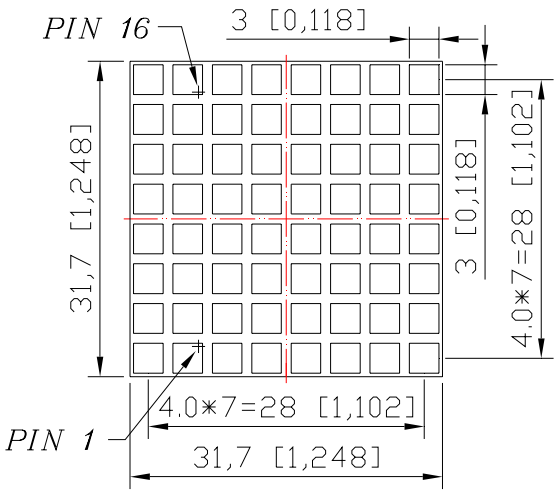
Applications:

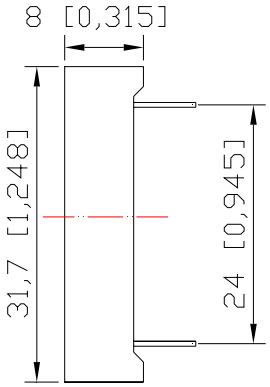
- ◇ Audio equipment.
- ◇ Instrument panels.
- ◇ Digital read out display.

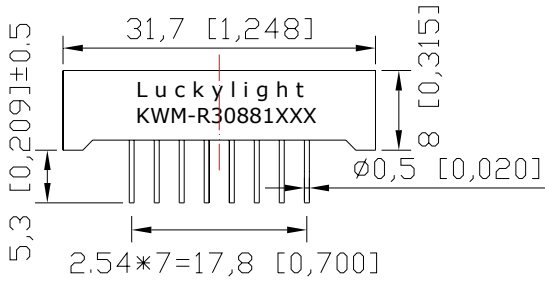
Device Selection Guide:

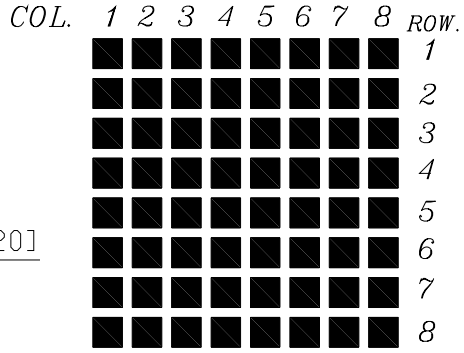
Model No.	Chip Material	Face Color	Descriptions
KWM-R30881AUAB	AlGaInP	Black	Row Anode
KWM-R30881CUAB		Black	Row Cathode

Package Dimension:



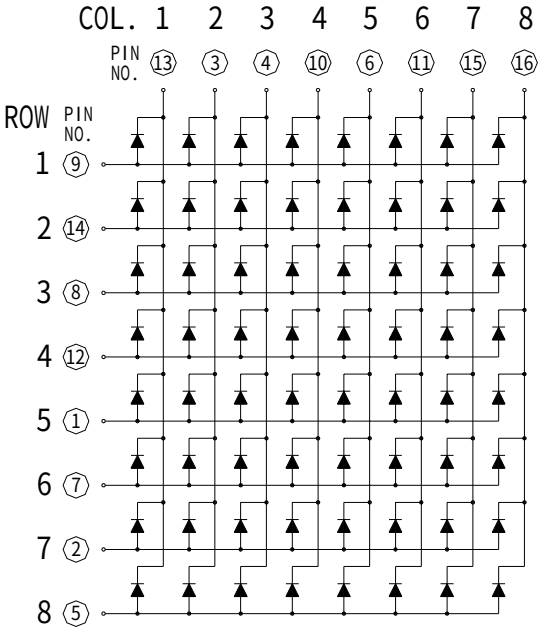


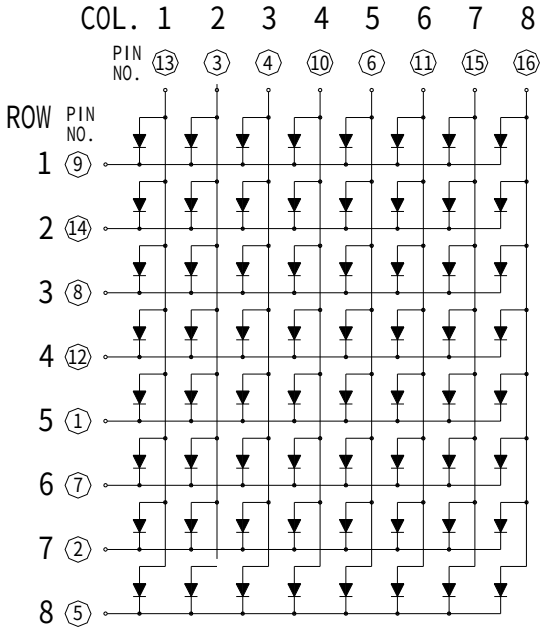




KWM-R30881AUAB

KWM-R30881CUAB





NOTES: All dimensions are in millimeters (inches) tolerance are ±0.25mm (0.01inch) unless otherwise noted.

Absolute Maximum Ratings at Ta=25°C

Parameters	Symbol	Max.	Unit
Power Dissipation (Per dot)	PD	65	mW
Peak Forward Current (Per dot) (1/10 Duty Cycle, 0.1ms Pulse Width)	IFP	100	mA
Forward Current (Per dot)	IF	25	mA
Dating Linear From 25°C		0.4	mA/°C
Reverse Voltage	VR	5	V
Operating Temperature Range	Topr	-40°C to +80°C	
Storage Temperature Range	Tstg	-40°C to +85°C	
Soldering Temperature	Tsld	260°C for 5 Seconds	

Electrical Optical Characteristics at Ta=25°C

Parameters	Symbol	Min.	Typ.	Max.	Unit	Test Condition
Luminous Intensity	IV	18.0	36.0	---	mcd	IF=20mA (Note 1)
Luminous Intensity Matching Ratio (dot To dot)	I_{v-m}	---	---	2:1		IF=10mA
Peak Emission Wavelength	λp	---	610	---	nm	IF=20mA
Dominant Wavelength	λd	---	605	---	nm	IF=20mA (Note 2)
Spectral Line Half-Width	△λ	---	20	---	nm	IF=20mA
Forward Voltage	VF	---	2.1	2.6	V	IF=20mA
Reverse Current	IR	---	---	50	μA	VR=5V

Notes:

1. Luminous intensity is measured with a light sensor and filter combination that approximates the CIE eye-response curve.
2. The dominant wavelength (λd) is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.

Typical Electrical / Optical Characteristics Curves

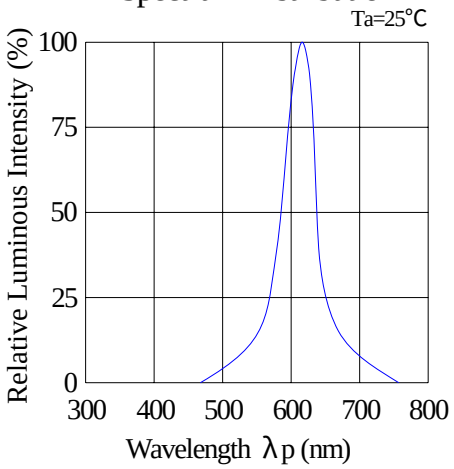
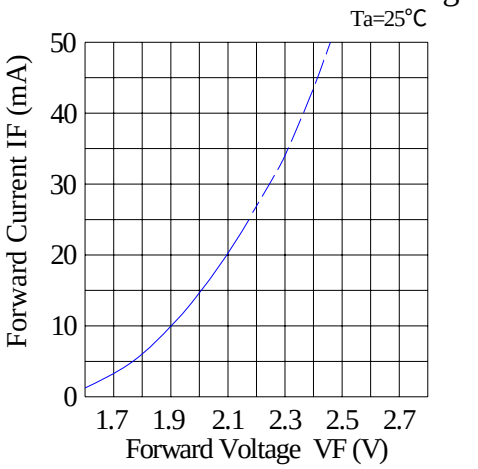
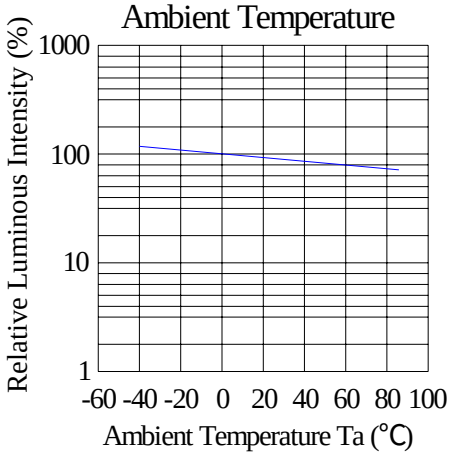
Spectrum Distribution



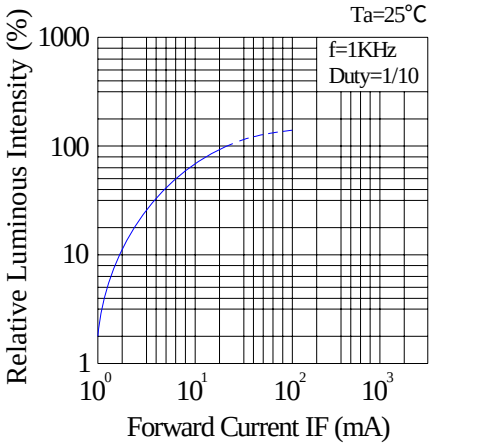
Forward Current & Forward Voltage



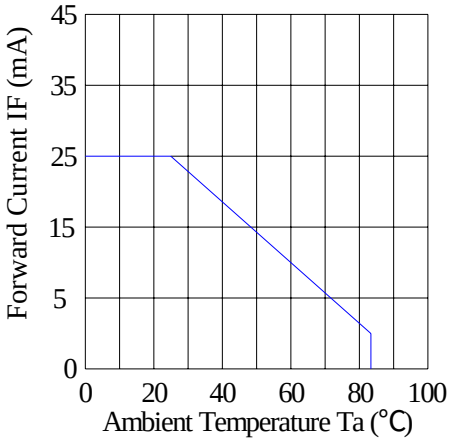
Luminous Intensity & Ambient Temperature



Luminous Intensity & Forward Current



Forward Current Derating Curve



Please read the following notes before using the datasheets:

1. Over-current-proof

Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change (Burn out will happen).

2. Storage

2.1 If the package contains a moisture proof bag inside, please don't open the package before using.

2.2 Before opening the package, the LEDs should be kept at 30℃ or less and 80%RH or less.

2.3 The LEDs should be used within a year.

2.4 After opening the package, the LEDs should be kept at 30℃ or less and 60%RH or less.

3. Soldering Iron

Each terminal is to go to the tip of soldering iron temperature less than 260℃ for 5 seconds within once in less than the soldering iron capacity 25W. Leave two seconds and more intervals, and do soldering of each terminal. Be careful because the damage of the product is often started at the time of the hand solder.

4. Soldering

When soldering, for Lamp without stopper type and must be leave a minimum of 3mm clearance from the base of the lens to the soldering point.

To avoided the Epoxy climb up on lead frame and was impact to non-soldering problem, dipping the lens into the solder must be avoided.

Do not apply any external stress to the lead frame during soldering while the LED is at high temperature.

Recommended soldering conditions:

Soldering Iron		Wave Soldering	
Temperature Soldering Time	300℃ Max. 3 sec. Max. (one time only)	Pre-heat Pre-heat Time Solder Wave Soldering Time	100℃ Max. 60 sec. Max. 260℃ Max. 5 sec. Max.

Note: Excessive soldering temperature and / or time might result in deformation of the LED lens or catastrophic failure of the LED.

5. Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used . It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.
