### Overview

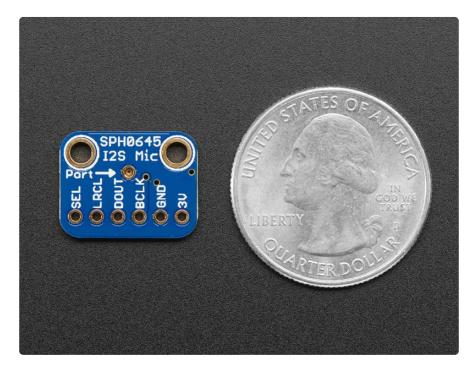

For many microcontrollers, adding audio input is easy with one of our analog microphone breakouts (http://adafru.it/1063). But as you get to bigger and better microcontrollers and microcomputers, you'll find that you don't always have an analog input, or maybe you want to avoid the noise that can seep in with an analog mic system. Once you get past 8-bit micros, you will often find an I2S peripheral, that can take digital audio data in! That's where this I2S Microphone Breakout comes in.

Instead of an analog output, there are three digital pins: Clock, Data and Word-Select. When connected to your microcontroller/computer, the 'I2S Main' will drive the clock and word-select pins at a high frequency and read out the data from the microphone. No analog conversion required!

The microphone is a single mono element. You can select whether you want it to be on the Left or Right channel by connecting the Select pin to power or ground. If you have two microphones, you can set them up to be stereo by sharing the Clock, WS and Data lines but having one with Select to ground, and one with Select to high voltage.

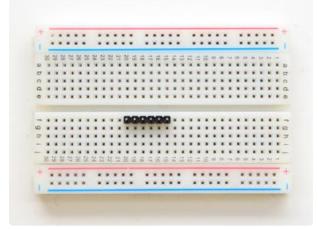

This I2S MEMS microphone is bottom ported, so make sure you have the hole in the bottom facing out towards the sounds you want to read. It's a 1.6-3.3V device only, so not for use with 5V logic (its really unlikely you'd have a 5V-logic device with I2S anyways). Many beginner microcontroller boards don't have I2S, so make sure its a

supported interface before you try to wire it up! This microphone is best used with Cortex M-series chips like the Arduino Zero, Feather MO, or single-board computers like the Raspberry Pi.

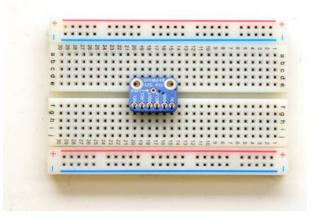

# Assembly

Assembly is really easy, you can use straight or 'right-angle' style headers to attach to the PCB. We'll be using the plain straight headers included

The board comes with all surface-mount components pre-soldered. The included header strip can be soldered on for convenient use on a breadboard or with 0.1" connectors. You can also skip this step and solder on wires.

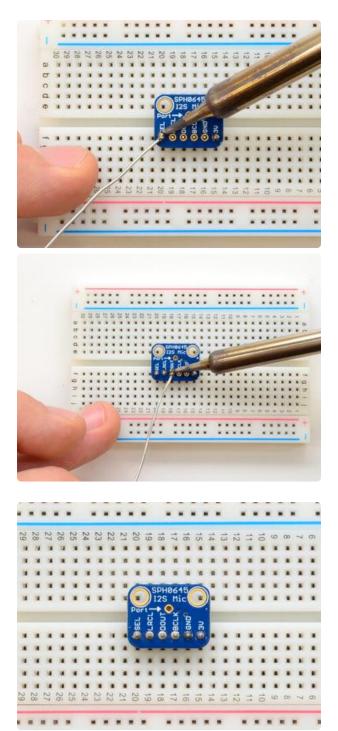

Prepare the header strip: Cut the strip to length if necessary. It will be easier to solder if you insert it into a breadboard - long pins down

### Add the breakout board:

Place the breakout board over the pins so that the short pins poke through the breakout pads

Make sure the side with the components is face down, as shown in the photos in this guide!

### And Solder!

Be sure to solder all 5 pins for reliable electrical contact.

(For tips on soldering, be sure to check out our Guide to Excellent Soldering (https://adafru.it/aTk)).

You're done! Check your solder joints visually and continue onto the next steps

## Pinouts

Unlike most of our breakouts, this sensor has the detection element on the bottom of the PCB, so we expect you to solder it 'upside down' with the sensor package on the bottom and the port on top!

### **Power Pins**

- 3V this is the power in pin. Technically it can be powered from as low as 1.6V to 3.6V but you'll need to make sure your logic level matches!
- GND power and data ground

### **I2S** Data Pins

- BCLK the bit clock, also known as the data clock or just 'clock' comes from the I2S main to tell the microphone its time to transmit data. This should run at 2-4 MHz but we've found you can often run it a little slower and it'll work fine
- DOUT the data output from the mic!
- LRCLK the left/right clock, also known as WS (word select), this tells the mic when to start transmitting. When the LRCLK is low, the left channel will transmit. When LRCLK is high, the right channel will transmit.
- SEL the channel select pin. By default this pin is low, so that it will transmit on the left channel mono. If you connect this to high logic voltage, the microphone will instantly start transmitting on the right channel.

# Arduino Wiring & Test

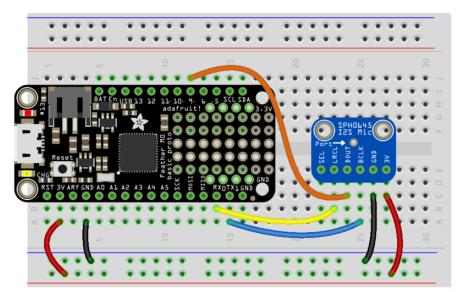

Remember, the I2S microphone requires an I2S peripheral and won't work with chips that don't support it in hardware! For this example we'll use a Feather M0, but you can also use an Arduino Zero.

# Wiring

For Feather M0, Ardruino Zero and friends, use the following wiring:

- GND connected GND
- 3.3V connected 3.3V (Feather, Zero) or VCC (MKR1000, MKRZero)
- LRCLK / WS connected to pin 0 (Feather, Zero) or pin 3 (MKR1000, MKRZero)
- BCLK connected to pin 1 (Feather, Zero) or pin 2 (MKR1000, MKRZero)
- Data /SD connected to pin 9 (Zero) or pin A6 (MKR1000, MKRZero

You can leave Select disconnected

fritzing

i2sfeatherm0.fzz

https://adafru.it/uya

# **I2S** Library

Luckily, there's a nice little I2S library already written for Arduinos based on the SAMD processor. Make sure you have the most recent Arduino IDE and SAMD core. Then select the board you're using (e.g. Adafruit Feather M0) and you'll see the I2S library examples show up in the pulldown menu

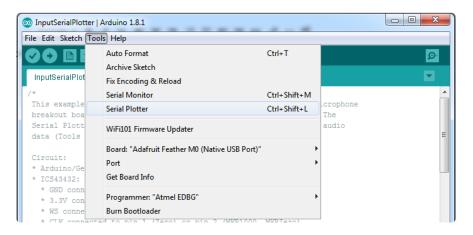

le Edit Sketch	Tools Help	SD	'

You could try the InputPlotter demo but this code is higher resolution:

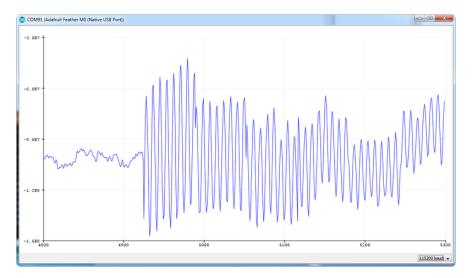

```
This example reads audio data from an I2S microphone
 breakout board, and prints out the samples to the Serial console. The
 Serial Plotter built into the Arduino IDE can be used to plot the audio
 data (Tools -> Serial Plotter)
 Circuit:
 * Arduino/Genuino Zero, MKRZero or MKR1000 board
   * GND connected GND
   * 3.3V connected 3.3V (Zero) or VCC (MKR1000, MKRZero)
   * WS connected to pin 0 (Zero) or pin 3 (MKR1000, MKRZero)
   * CLK connected to pin 1 (Zero) or pin 2 (MKR1000, MKRZero)
   * SD connected to pin 9 (Zero) or pin A6 (MKR1000, MKRZero)
 created 17 November 2016
 by Sandeep Mistry
 */
#include <I2S.h&gt;
void setup() {
  // Open serial communications and wait for port to open:
  // A baud rate of 115200 is used instead of 9600 for a faster data rate
  // on non-native USB ports
  Serial.begin(115200);
  while (!Serial) {
   ; // wait for serial port to connect. Needed for native USB port only
  }
  // start I2S at 16 kHz with 32-bits per sample
  if (!I2S.begin(I2S_PHILIPS_MODE, 16000, 32)) {
    Serial.println("Failed to initialize I2S!");
    while (1); // do nothing
```

```
}
}
void loop() {
    // read a sample
    int sample = I2S.read();
    if ((sample == 0) || (sample == -1) ) {
        return;
    }
    // convert to 18 bit signed
    sample >>= 14;
    // if it's non-zero print value to serial
    Serial.println(sample);
}
```

Upload to your Arduino Zero/Feather wired up as above, and open up the Serial Plotter

Try blowing or whistling at the sensor to see response in real time

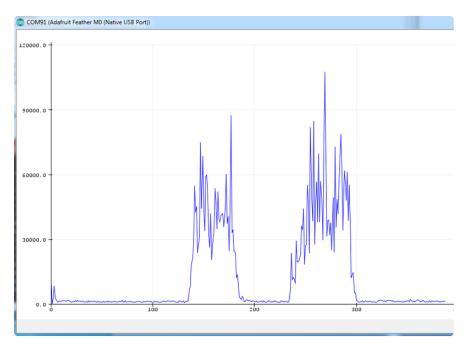

## VU Meter Demo

Often times you don't want the actual audio data but the overall "sound pressure level". This example will take a bunch of samples, normalize the data to be around 0, then give you the maximum difference between the waveforms for a 'volume graph'

```
/*
 This example reads audio data from an Invensense's ICS43432 I2S microphone
 breakout board, and prints out the samples to the Serial console. The
 Serial Plotter built into the Arduino IDE can be used to plot the audio
 data (Tools -> Serial Plotter)
 Circuit:
 * Arduino/Genuino Zero, MKRZero or MKR1000 board
 * ICS43432:
   * GND connected GND
   * 3.3V connected 3.3V (Zero) or VCC (MKR1000, MKRZero)
  * WS connected to pin 0 (Zero) or pin 3 (MKR1000, MKRZero)
  * CLK connected to pin 1 (Zero) or pin 2 (MKR1000, MKRZero)
   * SD connected to pin 9 (Zero) or pin A6 (MKR1000, MKRZero)
 created 17 November 2016
 by Sandeep Mistry
 */
#include <I2S.h&gt;
void setup() {
  // Open serial communications and wait for port to open:
  // A baud rate of 115200 is used instead of 9600 for a faster data rate
  // on non-native USB ports
  Serial.begin(115200);
  while (!Serial) {
    ; // wait for serial port to connect. Needed for native USB port only
  }
  // start I2S at 16 kHz with 32-bits per sample
  if (!I2S.begin(I2S_PHILIPS_MODE, 16000, 32)) {
    Serial.println("Failed to initialize I2S!");
    while (1); // do nothing
  }
}
#define SAMPLES 128 // make it a power of two for best DMA performance
void loop() {
  // read a bunch of samples:
  int samples[SAMPLES];
  for (int i=0; i<SAMPLES; i++) {
    int sample = 0;
    while ((sample == 0) || (sample == -1) ) {
      sample = I2S.read();
    }
    // convert to 18 bit signed
    sample >>= 14;
    samples[i] = sample;
  }
  // ok we hvae the samples, get the mean (avg)
  float meanval = 0;
  for (int i=0; i<SAMPLES; i++) {
    meanval += samples[i];
```

```
}
  meanval /= SAMPLES;
  //Serial.print("# average: " ); Serial.println(meanval);
  // subtract it from all sapmles to get a 'normalized' output
  for (int i=0; i<SAMPLES; i++) {
    samples[i] -= meanval;
    //Serial.println(samples[i]);
  }
  // find the 'peak to peak' max
  float maxsample, minsample;
  minsample = 100000;
  maxsample = -100000;
  for (int i=0; i<SAMPLES; i++) {
    minsample = min(minsample, samples[i]);
maxsample = max(maxsample, samples[i]);
  Serial.println(maxsample - minsample);
}
```

Open up the serial plotter to see how making noises will create peaks!

## ArduinoSound Library

For most uses, its better to have a higher-level library for managing sound. The Ardu inoSound library works with I2S mics and can do filtering, amplitude detection, etc!

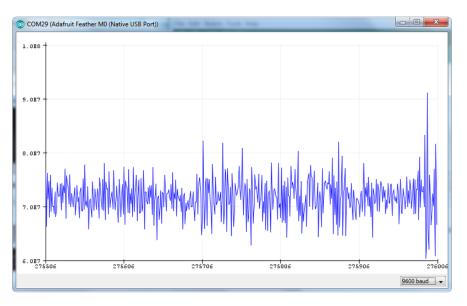

Install it using the Arduino library manager

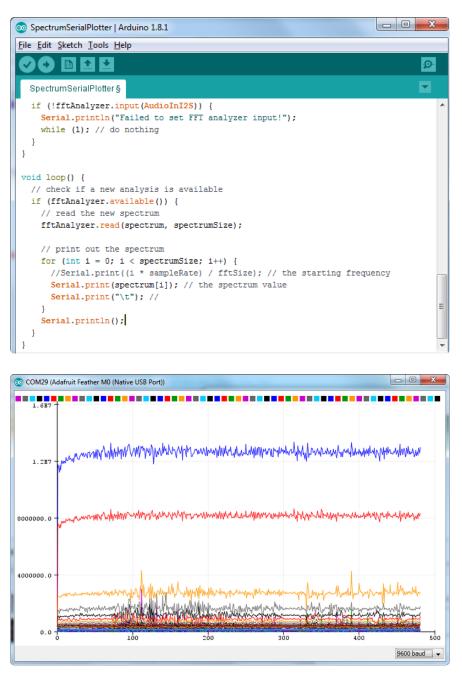

Various examples come with the library, check them out in the File->Examples->ArduinoSound sub menu

ile Edit Sketch	Tools Help

exected 17 N	lowerbarn 2016	chibiArduino	•

For example, amplitude Serial plotter will do basic amplitude plotting:

You can also do FFT spectral diagramming using SpectrumSerialPlotter. We made a small change to the example so that all 128 bins are plotted:

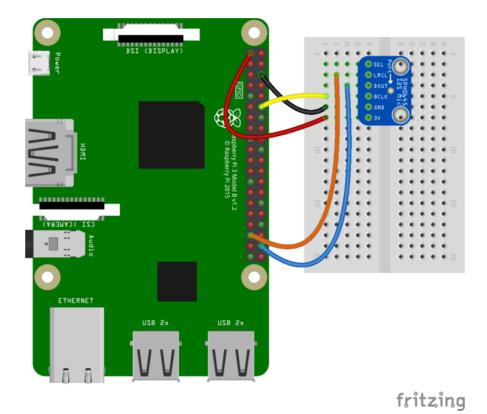

## Raspberry Pi Wiring & Test

You can add mono or stereo I2S microphones to your Raspberry Pi, too! This will work with any Raspberry with a 2x20 GPIO connector.

This guide is largely based on this <u>great git repo</u> (https://adafru.it/KBh), which we forked for use here. Also useful was the information provided in this <u>forum post</u> (https://adafru.it/fEw).

### Wiring For Mono Mic

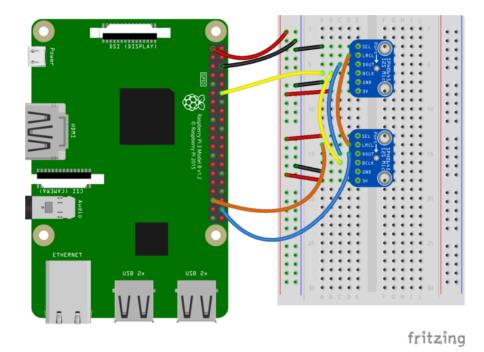

- Mic 3V to Pi 3.3V
- Mic GND to Pi GND
- Mic SEL to Pi GND (this is used for channel selection, connect to either 3.3V or GND)
- Mic BCLK to BCM 18 (pin 12)
- Mic DOUT to BCM 20 (pin 38)
- Mic LRCL to BCM 19 (pin 35)

### Wiring For Stereo Mic

Connect both mics as above except for the SEL pin.

- Left Mic SEL to Pi GND
- Right Mic SEL to Pi 3.3V

Be sure to follow all these steps in the order shown to insure the I2S mic module is built against the proper kernel headers.

#### Install Raspbian on an SD Card

You'll need to start with Raspbian or Raspbian Lite. Get the latest version from the <u>Ra</u> <u>spberry Pi Download page</u> (https://adafru.it/fQi) and follow <u>these instructions to install</u> the OS image to the SD card (https://adafru.it/jd0).

### Update the Pi

Run these commands:

sudo apt-get -y update
sudo apt-get -y upgrade

and then REBOOT THE PI.

### Python and Pip

Run the following command to make sure you have Python 3 and Pip installed:

```
sudo apt install python3-pip
```

### Installer Script

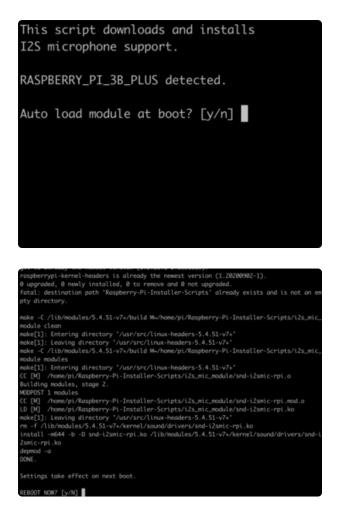

This script will do all the work for you. Here are the commands to run. Make sure your Pi has network access, it needs to download the software!

```
cd ~
sudo pip3 install --upgrade adafruit-python-shell
wget https://raw.githubusercontent.com/adafruit/Raspberry-Pi-Installer-Scripts/
master/i2smic.py
sudo python3 i2smic.py
```

```
pi@raspberrypi:~ $ cd ~
pi@raspberrypi:~ $ sudo pip3 install --upgrade adafruit-python-shell

 pi@raspberrypi:~ $ sudo python3 i2smic.py
```

### Run the Script

Once you run the script, you will be presented with options for configuration.

Auto Load at Boot

The Pi model should be automatically detected.

If you want the I2S mic module support to be loaded at boot, select Yes here. Otherwise you'll have to manually install the module each time you want to use it.

#### Reboot

Since the script runs a system update and installs some other needed support software, it may take a while to run. Just let it go. When it's finished, you should be prompted with an option to reboot.

You need to reboot for the settings to take effect.

### Test & Record!

OK, that probably took a bit of time, but now you are ready to rock!

Use the following command to list the available input devices:

arecord -l

You should see a card entry with information similar to this:

••					pi@raspbe	errypi: ~					
File Edit	View	Search	Terminal	Help							
pi@rasp				ord -l rdware Dev:		*					
card 0:	snd	rpii2s	card [	snd_rpi_i2	s_card],	device			ard_co	dec_link	snd-s
				card_codec <sub>_</sub>	_link sn	d-soc-d	ummy-	dai-0]			
		s: 1/1									
			ubdevi	ce #0							
pi@rasp	berr	урт:~	Ş								

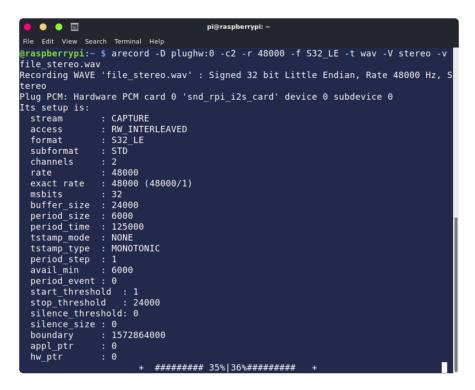

Note the card number. In the screen shot above it is 0. You can record a wav file in mono with this command (change the **-plughw** parameter to match the card number from above):

```
arecord -D plughw:0 -c1 -r 48000 -f S32_LE -t wav -V mono -v file.wav
```

Or, if you have two i2s mics installed, record in stereo with this command:

```
arecord -D plughw:0 -c2 -r 48000 -f S32_LE -t wav -V stereo -v file_stereo.wav
```

If all is working correctly, you should see the VU meter react at the bottom of the terminal window:

#### **Test Playback**

If you have speakers hooked up to the Pi, you can play the file back directly on the device:

aplay file.wav

Or, you can copy it over to your computer for playback :), make sure SSH is enabled and then:

```
scp pi@raspberrypi:file.wav ~/Desktop/file.wav
```

#### Manual Load

If you chose <u>not</u> to auto load the module at boot, then you will need to manually load it with the following command:

sudo modprobe snd-i2smic-rpi rpi\_platform\_generation=PI\_SEL

Replace **PI\_SEL** with the approriate value for your Pi Model:

- 0 = Pi Zero or Zero W
- 1 = Pi 2 or 3
- 2 = Pi 4

You can use the **arecord** -l command to verify it loaded. Example on a Pi 3:

Θ Ο Ο 🔟	pi@raspberrypi: ~
File Edit View Search	Terminal Help
pi@raspberrypi:~ \$ pi@raspberrypi:~ \$ **** List of CAPTU card 0: sndrpii2sc	<pre>IRE Hardware Devices **** is sudo modprobe snd-i2smic-rpi rpi_platform_generation=1 is arecord -l IRE Hardware Devices **** card [snd_rpi_i2s_card], device 0: simple-card_codec_link snd-s .mple-card_codec_link snd-soc-dummy-dai-0] ubdevice #0</pre>

#### Rebuilding After System Update

If you later run a system update and find that the I2S mic no longer works, you may need to rebuild and reinstall the driver. To do so, simply run the install script again:

```
sudo ./i2smic.sh
```

It may complain about things, like git, already being installed. But you can generally ignore those error messages.

If you've deleted the repo directory since the original install, then just reclone it.

#### Adding Volume Control

You can add volume control to your mic via alsamixer and alsa config. (<u>Hat tip to</u> <u>RickTracer</u> (https://adafru.it/doW)). To do so, create and edit a file .asoundrc in your home directory.

```
nano ~/.asoundrc
```

and put the following in:

```
#This section makes a reference to your I2S hardware, adjust the card name
# to what is shown in arecord -l after card x: before the name in []
#You may have to adjust channel count also but stick with default first
pcm.dmic_hw {
       type hw
       card sndrpii2scard
       channels 2
       format S32 LE
}
#This is the software volume control, it links to the hardware above and after
# saving the .asoundrc file you can type alsamixer, press F6 to select
# your I2S mic then F4 to set the recording volume and arrow up and down
# to adjust the volume
# After adjusting the volume - go for 50 percent at first, you can do
# something like
# arecord -D dmic_sv -c2 -r 48000 -f S32_LE -t wav -V mono -v myfile.wav
pcm.dmic sv {
       type softvol
       slave.pcm dmic hw
       control {
              name "Boost Capture Volume"
              card sndrpii2scard
       }
       min dB -3.0
       max_dB 30.0
}
```

••	pi@raspberrypi: ~
File Edit View Search Terminal Help GNU nano 3.2	/home/pi/.asoundrc
$ec{\#}$ to what is shown in areco	rence to your I2S hardware, adjust the card name rd -l after card x: before the name in [] nnel count also but stick with default first
<pre># saving the .asoundrc file # your I2S mic then F4 to s # to adjust the volume # After adjusting the volum</pre>	e control, it links to the hardware above and after you can type alsamixer, press F6 to select et the recording volume and arrow up and down e - go for 50 percent at first, you can do
	48000 -f S32_LE -t wav -V mono -v myfile.wav
pcm.dmic_sv { type softvol slave.pcm dmic_hw control { name "Boost card sndrpi	: Capture Volume" i2crard
card snorpi } min_dB -3.0 max_dB 30.0	125Calu
^G Get Help <mark>^0</mark> Write Out ^ ^X Exit      ^R Read File ^	

Now before you can change the volume you need to use the device once (this is an alsa thing)

Run:

arecord -D dmic\_sv -c2 -r 44100 -f S32\_LE -t wav -V mono -v file.wav

And cancel with ^C once it starts recording.

Now you can run alsamixer - press F6 and select the I2S sound card

● ● ● 🔟	pi@raspberrypi: ~	
File Edit View Search Terminal Help		
Card: snd_rpi_i2s_card Chip:	——————————————————————————————————————	F1: Help F2: System information
View: F3:[Playback] F4: C Item:		F6: Select sound card Esc: Exit
This sound dev	ice does not have any playb Sound Card (default) snd_rpii2s_card bcm2835 ALSA enter device name	ack controls.

It will complain there are no playback controls (because its for recording only).

Press F4 to switch to Capture mode and you should be able to adjust the volume with up/down arrow keys.

Then you can record with the i2c mic device using:

arecord -D dmic\_sv -c2 -r 48000 -f S32\_LE -t wav -V mono -v recording.wav

and playback with:

aplay recording.wav

### Old Kernel Install Method

This technique is not suggested, see previous page for a better working method!!!

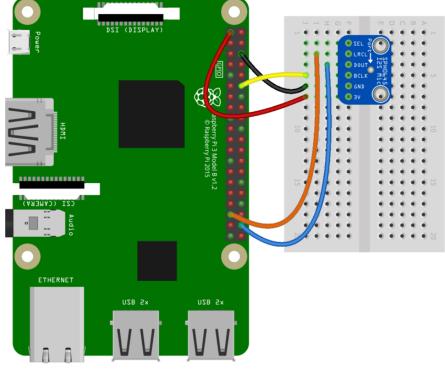

You can add mono or stereo I2S microphones to your Raspberry Pi, too!

This will work with Raspberry Pi B+, 2, 3, Zero and any other 2x20-connector-Pi

This guide is largely based on this great git repo <a href="https://github.com/nejohnson2/rpi-i2s">https://github.com/nejohnson2/rpi-i2s</a> (https://adafru.it/vka)

## Wiring For Mono Mic

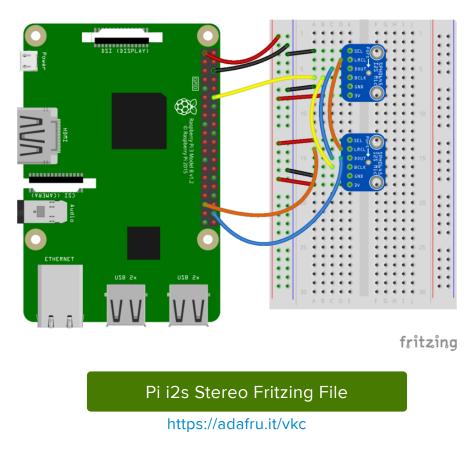

- Mic 3V Pi 3.3v
- Mic Gnd Pi Gnd
- Mic SEL Pi Gnd (this is used for channel selection. Connect to 3.3 or GND)
- Mic BCLK BCM 18 (pin 12)
- Mic LRCL BCM 19 (pin 35)
- Mic DOUT BCM 20 (pin 38)

fritzing

## Wiring For Stereo Mic

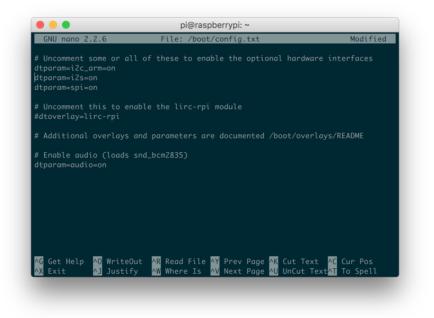

# Raspberry Pi i2s Configuration

Start by logging into your Raspberry Pi via a terminal, we recommend ssh so you can copy + paste the many commands.

Turn on i2s support by editing /boot/config.txt with:

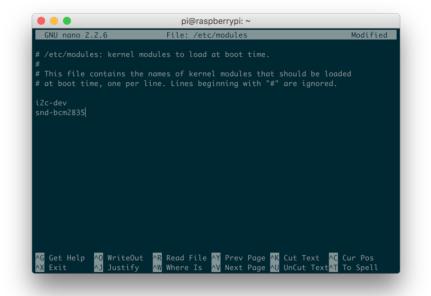

sudo nano /boot/config.txt

Uncomment #dtparam=i2s=on

Next, we'll make sure sound support is enabled in the kernel with:

sudo nano /etc/modules

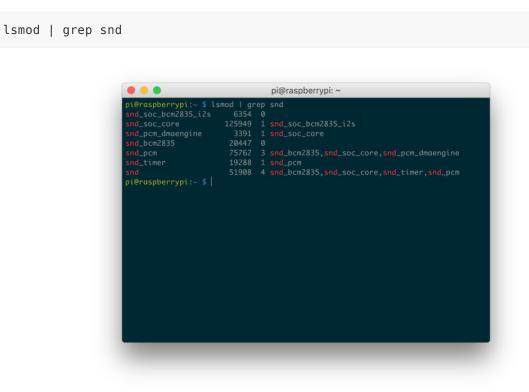

Add snd-bcm2835 on its own line, to the modules file as shown below

Now reboot your pi with:

sudo reboot

Once rebooted, re-log in.

Enter the following to confirm the modules are loaded

## Kernel Compiling

Ok now its time for the fun part! You'll manually compile in i2s support.

Start by updating your Pi:

```
sudo apt-get update
sudo apt-get install rpi-update
sudo rpi-update
```

Then reboot!

Install the compilation dependencies:

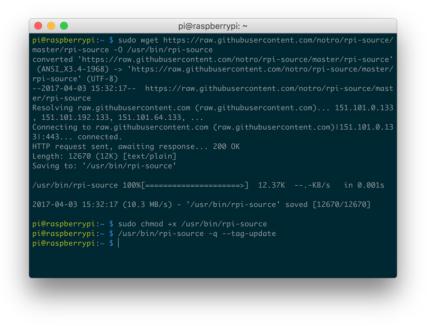

```
sudo apt-get install git bc libncurses5-dev bison flex libssl-dev
```

Download kernel source & compile:

```
sudo wget https://raw.githubusercontent.com/notro/rpi-source/master/rpi-source -0 /
usr/bin/rpi-source
```

```
sudo chmod +x /usr/bin/rpi-source
/usr/bin/rpi-source -q --tag-update
rpi-source --skip-gcc
```

On a Pi 3 this will take many many minutes, so don't worry if its taking 15 minutes. On a Pi Zero it can take an hour or longer!

If the script pauses at this prompt:

```
Code coverage for fuzzing (KCOV) [N/y/?] (NEW)
```

Just press enter to accept the default and continue.

### Prepare to Compile the i2s module

Now you're ready to compile i2s support:

```
sudo mount -t debugfs debugs /sys/kernel/debug
```

This may already be done - mount: debugs is already mounted - in which case keep going

If you are using Pi 3 or Pi 2 - make sure the module name is 3f203000.i2s

If you are using Pi Zero - the module name is 20203000.i2s

#### Run rpi-i2s-audio

Download the module, written by Paul Creaser (https://adafru.it/vkd)

```
git clone https://github.com/PaulCreaser/rpi-i2s-audio
cd rpi-i2s-audio
```

#### Pi Zero Only

If you are using a Raspberry Pi Zero, edit my\_loader.c with nano my\_loader.c and change the two lines

```
.platform = "3f203000.i2s",
```

and

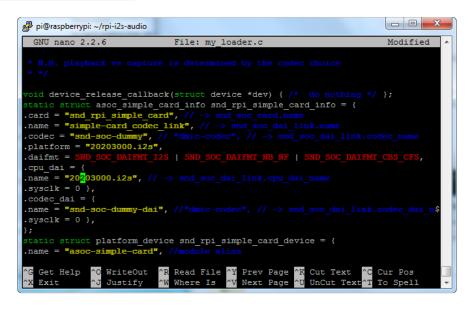

```
.name = "3f203000.i2s",
```

with

```
.platform = "20203000.i2s",
```

and

```
.name = "20203000.i2s",
```

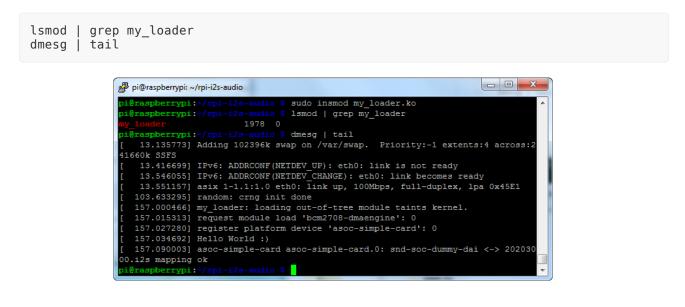

If you aren't using a Pi Zero, continue on!

Compile the module with

```
make -C /lib/modules/$(uname -r )/build M=$(pwd) modules
sudo insmod my_loader.ko
```

Verify that the module was loaded:

Note that on the Pi 2/3 you'll see asoc-simple-card asoc-simple-card.0: sndsoc-dummy-dai <-> 3F203000.i2s mapping ok on the last line and on Pi Zero you'll see asoc-simple-card asoc-simple-card.0: snd-soc-dummy-dai <-> 20203000.i2s mapping ok

### Auto-load the module on startup

Now you can set it up so the module is loaded every time you boot the Pi

```
sudo cp my_loader.ko /lib/modules/$(uname -r)
echo 'my_loader' | sudo tee --append /etc/modules > /dev/null
sudo depmod -a
sudo modprobe my_loader
```

#### And reboot!

sudo reboot

## Test & Record!

OK that was a lot of effort but now you are ready to rock!

Use the following command to list the available input devices:

you should see a snd\_rpi\_simple\_card

🛃 pi@raspberrypi: ~	Thanks for 1	the l		_ 0 <u>X</u>
pi@raspberrypi:~ \$ arecon	rd -1			
**** List of CAPTURE Hard		**		
card 1: sndrpisimplecar	[snd_rpi_simple_	card], device	): simple-card	codec_link
snd-soc-dummy-dai-0 []				
Subdevices: 1/1				
Subdevice #0: subdevice	<b>≜</b> #0			
pi@raspberrypi:- 🖇				

You can record a way file in mono with this command:

arecord -D plughw:1 -c1 -r 48000 -f S32\_LE -t wav -V mono -v file.wav

Or, if you have two i2s mics installed, record in stereo with this command:

arecord -D plughw:1 -c2 -r 48000 -f S32\_LE -t wav -V stereo -v file\_stereo.wav

If all is working correctly, you should see the VU meter react at the bottom of the terminal window

Recording WAV	i;~ \$ arecord -D plughw:1 -c2 -r 48000 -f S32_LE -t wav -V stereo -v file_stereo.w E 'file_stereo.wav' : Signed 32 bit Little Endian, Rate 48000 Hz, Stereo dware PCM card 1 'snd_rpi_simple_card' device 0 subdevice 0

hw_ptr	

#### **Test Playback**

If you have speakers hooked up to the Pi, you can play the file back directly on the device:

aplay file.wav

Or, you can copy it over to your computer for playback :), just insert your Pi's IP address below:

```
scp pi@<local-ip&gt;:/home/pi/file.wav ~/Desktop/file.wav
```

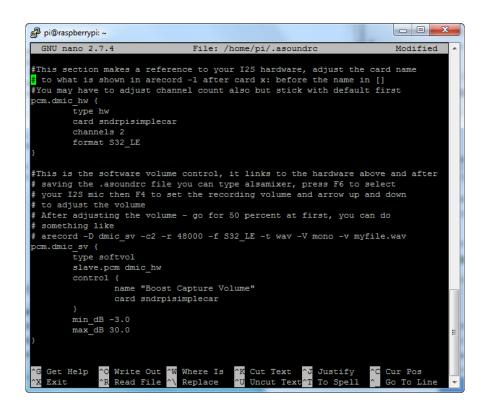

## Adding Volume control

You can add volume control to your mine via alsamixer and alsa config. (<u>Hat tip to</u> RickTracer (https://adafru.it/doW))

Run sudo nano ~/.asoundrc

and put the following in:

```
#This section makes a reference to your I2S hardware, adjust the card name
# to what is shown in arecord -l after card x: before the name in []
#You may have to adjust channel count also but stick with default first
pcm.dmic_hw {
       type hw
       card sndrpisimplecar
       channels 2
       format S32 LE
}
#This is the software volume control, it links to the hardware above and after
# saving the .asoundrc file you can type alsamixer, press F6 to select
# your I2S mic then F4 to set the recording volume and arrow up and down
# to adjust the volume
# After adjusting the volume - go for 50 percent at first, you can do
# something like
# arecord -D dmic_sv -c2 -r 48000 -f S32_LE -t wav -V mono -v myfile.wav
pcm.dmic_sv {
       type softvol
       slave.pcm dmic hw
       control {
              name "Boost Capture Volume"
              card sndrpisimplecar
       }
       min_dB -3.0
       max_dB 30.0
}
```

Now before you can change the volume you need to use the device once (this is an alsa thing)

Run

```
arecord -D dmic_sv -c2 -r 44100 -f S32_LE -t wav -V mono -v file.wav
```

And cancel with ^C once it starts recording.

Now you can run alsamixer - press F6 and select the I2S simple sound card

ę	🖗 pi@raspberrypi: ~		Ŋ
	AlsaMixer v1.1.3	A	1
	Card: bcm2835 ALSA	F1: Help	Ш
	Chip: Broadcom Mixer	F2: System information	
	View: F3: [Playback] F4: Capture F5: All	F6: Select sound card	
	Item: PCM [dB gain: -20.00]	Esc: Exit	
			1
	Sound Card —		
	- (default)		
	0 bcm2835 ALSA		
	1 snd rpi simple card		
	enter device name		
1			
	20		
	40		
L			J

It will complain there are no playback controls (because its for recording only).

Press F5 to change the volume.

pi@raspberrypi:~	_ = ×
File Edit Tabs Help	
AlsaMixer v1.0.28 Card: snd_rpi_simple_card Chip: View: F3: Playback F4: [Capture] F5: All Item: Boost [dB gain: 36.20, 36.20]	F1: Help F2: System information F6: Select sound card Esc: Exit

Then you can record with the i2c mic device using

arecord -D dmic\_sv -c2 -r 48000 -f S32\_LE -t wav -V mono -v
recording.wav

and playback with

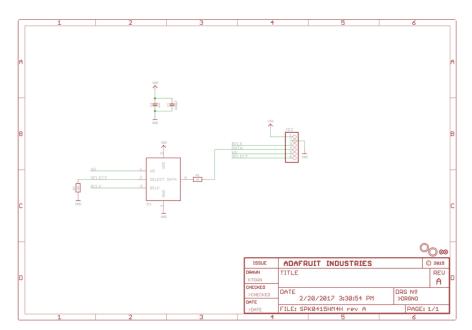

aplay recording.wav
