

■ FEATURES

- Ultra-Low Quiescent Current.
- 1.5V to 10.0V Input Voltage Operation.
- Flexible Detection Voltage Setting
0.1V Step in the Range of 1.6V to 6.0V
- High Detection Voltage Accuracy at $\pm 2.5\%$.
- Built-In Detection Voltage Hysteresis.
- Three Output Types: N-ch, P-ch and CMOS.
- Space Saving Packages: TO-92, SOT-89, SOT-23 and SOT23-5.

■ APPLICATIONS

- Battery Checker for Battery-Operated Systems.
- CPU & Logic Circuit Reset.
- Memory Back-up Circuit.
- Level Discriminator.
- Power Failure Detector.

■ DESCRIPTION

The AIC1680 is an accurate, ultra-low power consumption voltage detector IC, fabricated with advanced CMOS process. The AIC1680 consists of a comparator, a voltage reference unit, a resistor divider, two output drivers, and a hysteresis circuit.

The consumption current is so low that it can often be ignored when compared to the battery self-discharge current. The values of detection and hysteresis voltage are set internally and are accurately controlled by trimming techniques. There are three types of output: N-ch open-drain, P-ch open-drain, and CMOS. Four types of package, TO-92, SOT-89, SOT-23 and SOT-23-5, are available to save board space.

■ PIN DESCRIPTIONS

- VDD - Power Supply and Detected Voltage Input.
- GND - Ground.
- VOUT - Detector Output.

APPLICATION INFORMATION

The timing diagram of V_{DD} and V_{OUT} is shown as below:

The guaranteed minimum operation voltage of AIC1680 is 1.5V. As the supply voltage (V_{DD}) is reduced below 1.5V, the performance degrades, N-ch or P-ch driving capacity degrades, and the supply current decreases. AIC1680 isn't functioning when V_{DD} down to 0.8V.

APPLICATION EXAMPLE

Fig.11 Detector threshold adjustable circuit

$$V_{DET-ADJ} = V_{DET} \frac{R1 + R2}{R2}$$

$$\text{Hysteresis Voltage} = V_{HYS} \frac{R1 + R2}{R2}$$

In some application, divided resistors are used to obtain detector threshold voltage as figure11 shown. If the value of resistor, R1, sets extremely large, voltage drop may occur resulting from the start-up current of IC, and detector threshold may oscillation.

■ PHYSICAL DIMENSIONS (unit: mm)

● SOT-23

- Note: 1. Refer to JEDEC MO-178.
 2. Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusion or gate burrs shall not exceed 10 mil per side.
 3. Dimension "E1" does not include inter-lead flash or protrusions.
 4. Controlling dimension is millimeter, converted inch dimensions are not necessarily exact.

1. Refer to JEDEC MO-178AA.
 2. Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusion or gate burrs shall not exceed 10 mil per side.
 3. Dimension "E1" does not include inter-lead flash or protrusions.
 4. Controlling dimension is millimeter, converted inch dimensions are not necessarily exact.

Note:

Information provided by AIC is believed to be accurate and reliable. However, we cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in an AIC product; nor for any infringement of patents or other rights of third parties that may result from its use. We reserve the right to change the circuitry and specifications without notice.

Life Support Policy: AIC does not authorize any AIC product for use in life support devices and/or systems. Life support devices or systems are devices or systems which, (i) are intended for surgical implant into the body or (ii) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
