Monitoring Technique

VARIMETER Standstill Monitor BD 5936

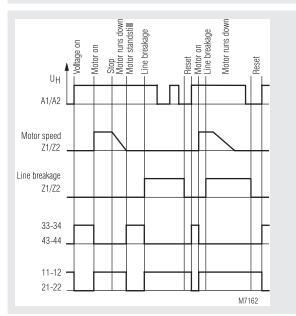

Product Description

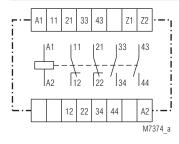

The BD 5936 detecting standstills of 3- and 1-phase asynchronous motors. At 2 terminals of the stator winding the BD 5936 measures the voltage of the slowing motor which has been induced. If the induction voltage approaches 0 this indicates that the device is at a standstill and the output relay is activated.

Additional the monitor detects strand breaks between measurement inputs Z1 / Z2.. If a line breakage is detected, the output relay goes into the normal position (as when the motor is running). This state ist saved and can only be cleared by (briefly) switching off the auxiliary voltage.

Function Diagram

Circuit Diagrams

Your Advantage

· Standstill monitoring without sensor

Features

- According to IEC/EN 60255-1, IEC/EN 60255-26
- · For standstill monitoring of 3- and 1-phase asynchronous motors
- · Line breakage detection in the measurement circuit
- Forcibly guided output contacts: 2 NO, 2 NC contacts for 250 V AC
- LED indicators for motor standstill, line breakage, and operating voltage
- Wire connection: also 2 x 1.5 mm^2 stranded ferruled (isolated), DIN 46 228/-1/-2/-3/-4 or
- 2 x 2.5 mm² stranded ferruled DIN 46 228-1/-2/-3
- Width 45 mm

Approvals and Markings

* see variants

Applications

For detecting standstills of 3- and 1-phase asynchronous motors, for example, for releasing protective door interlocks of machine tools or for activationg stopping brakes.

Notes

In the case on the motor wires the Z1 / Z2 connection wire should be installed separately from the motor supply and connected directly to the motor terminals. For longer distances please use twisted pair wires.

Indicators

Connection Terminals

Terminal designation Signal designation		
A1, A2	Auxiliary voltage U _H	
Z1, Z2	Measuring input (connection on motor)
