Description

The PS-6 potentiometer offers control where frequent adjustment is required. The shaftless design allows for employment of different engagement mechanisms, such as a customized shaft, a motor control or a human interface adjustment.

This potentiometer can also control variable outputs including frequency, change in motor speed or volume.

Typical applications include white goods, motor control, timer relays, power supply, appliance panel control, and automotive sensing applications, now offer product designers the full features of PIHER larger products in a miniature control / trimmer package.

This datasheet shows you the basics of the PS-6 potentiometer that is quite versatile and easy to taylor. Do not hesitate to contact Piher for advice.
