## AS1741, AS1742, AS1743

High-Speed, Low-Voltage, Single-Supply, $0.8 \Omega$, Dual SPST Analog Switches

## 1 General Description

The AS1741/AS1742/AS1743 are high-speed, low-voltage, dual single-pole/single-throw (SPST) analog switches.
Fast switching speeds, low ON-resistance, and low power-consumption make these devices ideal for singlecell battery powered applications.
These highly-reliable devices operate from a single +1.6 to +3.6 V supply, and are differentiated by the type and number of switches as listed in Table 1.
Table 1. Standard Products

| Model | Switch Types |
| :---: | :---: |
| AS1741 | Two Normally Open (NO) Switches |
| AS1742 | Two Normally Closed (NC) Switches |
| AS1743 | One NO Switch and One NC Switch |

The AS1743 supports break-before-make switching.
With very low ON-resistance (Ron), Ron matching, and Ron flatness, the devices can accurately switch signals for sample and hold circuits, digital filters, and op-amp gain switching networks.
The AS1741/AS1742/AS1743 digital logic input is 1.8 V CMOS-compatible when using a single +3 V supply, and all devices can handle Rail-to-Rail signals.
The devices are available in an 8-pin MSOP package and an 8-pin SOT23 package.

## 2 Key Features

- ON-Resistance:
- $0.8 \Omega$ (+3V supply)
- $2.5 \Omega$ (+1.8V supply)
- RoN Matching: $0.08 \Omega$ (+3V supply)
- Ron Flatness: $0.18 \Omega$ (+3V supply)
- Supply Voltage Range: +1.6 to +3.6 V
- Switching Action: ton $=22 \mathrm{~ns}$, toff $=14 \mathrm{~ns}$
- Current-Handling: 250 mA Continuous
- Break-Before-Make Switching (AS1743)
- Rail-to-Rail Signal Handling
- 1.8V CMOS Logic Compatible (+3V supply)
- Total Harmonic Distortion: 0.03\%
- Operating Temperature Range: -40 to $+85^{\circ} \mathrm{C}$
- Package Types:
- 8-pin MSOP
-8-pin SOT23

## 3 Applications

The devices are ideal for use in power routing systems, cordless and mobile phones, MP3 players, CD and DVD players, PDAs, handheld computers, digital cameras, hard drives, and any other application where high-speed signal switching is required.

Figure 3. SOT23 Pin Assignments (Top View)

## Pin Descriptions

Table 2. Pin Descriptions

| Pin Number | Pin Name | Description |
| :--- | :---: | :--- |
| See Figure 2 <br> and Figure 3 | COM1 | Analog Switch 1 Common |
|  | COM2 | Analog Switch 2 Common |
|  | GND | Ground |
|  | IN1 | Analog Switch 1 Logic Control Input |
|  | IN2 | Analog Switch 2 Logic Control Input |
|  | NC1 | Analog Switch 1 Normally Closed Terminal |
|  | NO1 | Analog Switch 2 Normally Closed Terminal |
|  | NO2 | Analog Switch 1 Normally Open Terminal |
|  | V+ | Input Supply Voltage. +1.6 to +3.6V |

## 5 Absolute Maximum Ratings

Stresses beyond those listed in Table 3 may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in Section 6 Electrical Characteristics on page 4 is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Table 3. Absolute Maximum Ratings

| Parameter | Min | Max | Units |  |
| :---: | :---: | :---: | :---: | :---: |
| V+, IN $x$ to GND | -0.3 | +5 | V |  |
| COM $x$, NOx, NCx to GND ${ }^{\dagger}$ | -0.3 | $\mathrm{V}+$ <br> +0.3 | V |  |
| COM $x$, NOx, NC $x$ Continuous Current | -250 | +250 | mA |  |
| COM $x$, NOx, NC $x$ Peak Current | -350 | +350 | mA | Pulsed at 1ms $10 \%$ duty cycle |
| Continuous Power Dissipation (TAMB $=+70^{\circ} \mathrm{C}$ ) |  | 362 | mW | Derate at 4.5mW/ ${ }^{\circ} \mathrm{C}$ above $+70^{\circ} \mathrm{C}$ |
| Electro-Static Discharge |  | 2500 | V | HBM Mil-Std883E 3015.7 methods |
| Latch Up Immunity IN1, IN2 |  | 150 | mA | Norm: JEDEC 17 |
| Latch Up Immunity all other Pins |  | 250 | mA |  |
| Operating Temperature Range | -40 | +85 | ${ }^{\circ} \mathrm{C}$ |  |
| Junction Temperature |  | +150 | ${ }^{\circ} \mathrm{C}$ |  |
| Storage Temperature Range | -65 | +150 | ${ }^{\circ} \mathrm{C}$ |  |
| Package Body Temperature |  | +260 | ${ }^{\circ}{ }^{\circ} \mathrm{C}$ | The reflow peak soldering temperature (body <br> temperature) specified is in accordance with <br> IPC/JEDEC J-STD-O20C "Moisture/Reflow <br> Sensitivity Classification for Non-Hermetic <br> Solid State Surface Mount Devices" |

${ }^{\dagger}$ Signals on pins COM1, COM2, NO1, NO2, NC1, or NC2 that exceed $\mathrm{V}+$ or GND are clamped by internal diodes. Limit forward-diode current to the maximum current rating.

## 6 Electrical Characteristics

1. $\Delta \operatorname{RON}=\operatorname{RON}(M A X)-\operatorname{RON}(M I N)$.
2. Flatness is defined as the difference between the maximum and the minimum value of ON-resistance as measured over the specified analog signal ranges.
3. Guaranteed by design.
4. Off-Isolation $=20 \log 10(\mathrm{Vcom} x / \mathrm{VNO}), \mathrm{Vcom} x=$ output, $\mathrm{VNO}=$ input to off switch.
5. Between two switches.

## 8 Detailed Description

The AS1741/AS1742/AS1743 are low ON-resistance, low-voltage, dual analog SPST switches that operate from a single +1.6 to +3.6 V supply.
CMOS process technology allows switching of analog signals that are within the supply voltage range (GND to $\mathrm{V}+$ ).

## ON Resistance

When powered from a +3 V supply, the AS1741/AS1742/AS1743 low ( $0.8 \Omega$, max) ON-resistance allows high-speed, continuous signals to be switched in a variety of applications. All devices have very low Ron flatness ( $0.18 \Omega$, max) so they can meet or exceed the low-distortion audio requirements of modern portable audio devices.

## Bi-Directional Switching

Pins NOx, NCx, and COMx are bi-directional and can be used as inputs or outputs.

## Analog Signal Levels

Analog signals ranging over the entire supply voltage range ( $\mathrm{V}+$ to GND) can be passed with very little change in ONresistance (see Typical Operating Characteristics on page 6).

## Logic Inputs

The AS1741/AS1742/AS1743 logic inputs can be driven up to +3.6 V regardless of the supply voltage value. For example, with a +1.8 V supply, IN $x$ may be driven low to GND and high to +3.6 V . This allows the devices to interface with +3 V systems using a supply of less than 3 V .

## 9 Application Information

## Power Supply Sequencing

Proper power-supply sequencing is critical for proper switch operation. The power supplies should be started up in the following sequence:

1. $\mathrm{V}+$
2. NOx, NCx, COM $x$

Note: Operation beyond the absolute maximum ratings (see page 2 ) may permanently damage the devices.

## Power Supply Bypass

Power supply connections to the devices must maintain a low impedance to ground. This can be done using a bypass capacitor, which will also improve noise margin and prevent switching noise propagation from the V+ supply to other components.

A $0.1 \mu \mathrm{~F}$ bypass capacitor, connected from $\mathrm{V}+$ to GND (see Figure 17 on page 11), is adequate for most applications.

## Logic Inputs

Driving INx Rail-to-Rail will help minimize power consumption.

## Layout Considerations

High-speed switches require proper layout and design procedures for optimum performance.

- Short, wide traces should be used to reduce stray inductance and capacitance.
- Bypass capacitors should be as close to the device as possible.
- Large ground planes should be used wherever possible.

## Timing Diagrams and Test Setups

Figure 12. AS1741/AS1743 Test Circuit and Timing Diagram

Figure 13. AS1742IAS1743 Test Circuit and Timing Diagram

Data Sheet - Application Information

Figure 14. AS1743 Test Circuit and Timing Diagram

Figure 15. Charge Injection

Figure 16. NOx, NCx, and COMx Capacitance

Figure 17. Off-Isolation, On-Loss, and Crosstalk

Notes:

1. Measurements are standardized against short-circuit at socket terminals.
2. Off-isolation is measured between COM $x$ and the off $N C x / N O x$ terminal of each switch. Off-isolation $=20 \log ($ Vout $/ \mathrm{VIN})$.
3. Signal direction through the switch is reversed; worst values are recorded.

## 10 Package Drawings and Markings

The devices are available in an 8-pin MSOP package and an 8-pin SOT23 package.
Figure 18. 8-pin MSOP Package

## Notes:

1. All dimensions are in millimeters, angles in degrees, unless otherwise specified.
2. Datums $B$ and $C$ to be determined at datum plane $H$.
3. Dimensions $D$ and $E 1$ are to be determined at datum plane $H$.
4. Dimensions D2 and E2 are for top package; dimensions D and E1 are for bottom package.
5. Cross section A-A to be determined at 0.13 to 0.25 mm from lead tip.
6. Dimensions D and D2 do not include mold flash, protrusion, or gate burrs.
7. Dimensions E1 and E2 do not include interlead flash or protrusion.

## Disclaimer

Devices sold by austriamicrosystems AG are covered by the warranty and patent indemnification provisions appearing in its Term of Sale. austriamicrosystems AG makes no warranty, express, statutory, implied, or by description regarding the information set forth herein or regarding the freedom of the described devices from patent infringement. austriamicrosystems AG reserves the right to change specifications and prices at any time and without notice. Therefore, prior to designing this product into a system, it is necessary to check with austriamicrosystems AG for current information. This product is intended for use in normal commercial applications. Applications requiring extended temperature range, unusual environmental requirements, or high reliability applications, such as military, medical life-support or lifesustaining equipment are specifically not recommended without additional processing by austriamicrosystems AG for each application. For shipments of less than 100 parts the manufacturing flow might show deviations from the standard production flow, such as test flow or test location.

The information furnished here by austriamicrosystems AG is believed to be correct and accurate. However, austriamicrosystems AG shall not be liable to recipient or any third party for any damages, including but not limited to personal injury, property damage, loss of profits, loss of use, interruption of business or indirect, special, incidental or consequential damages, of any kind, in connection with or arising out of the furnishing, performance or use of the technical data herein. No obligation or liability to recipient or any third party shall arise or flow out of austriamicrosystems AG rendering of technical or other services.
