

DESCRIPTION

Demonstration Circuit 1304A features two programmable filter ICs, the LTC6602 dual, matched, bandpass filter and the LTC6603, dual, matched, lowpass filter.

**The DC1304A-A is for an LTC6602 and
The DC1304A-B is for an LTC6603.**

The LTC®6602 is a dual, programmable bandpass filter and differential driver. The selectivity of the LTC6602 is ideal for filtering baseband tag signals in RFID systems. The LTC®6603 is a dual, programmable lowpass filter for communications receivers and transmitters in TD-SCDMA, WCDMA, CDMA2000, UMTS and 802.11x systems. A DC1304A-A or -B board has two pairs of SMA connectors for differential inputs and two pairs of SMA connectors for differential outputs. The differential inputs can be AC coupled or DC coupled. On board jumpers provide control of an LTC6602 or an LTC6603. The jumper control settings are: serial or parallel control, internal or external clock, gain and bandwidth control and input AC or DC coupling. An on board multi-turn potentiometer sets the value of the RBIAS resistor that sets the IC power supply current and clock frequency. PCB turrets provide for board connections to an SPI master for a serial control of IC gain and bandwidth.

LTC6602 features:

- Guaranteed Phase and Gain Matching Specs
- Programmable 5th Order Lowpass: 40 kHz to 900 kHz
- Programmable 4th Order Highpass: 4 kHz to 90 kHz
- Programmable Gain (0dB/12dB/24dB/30dB)
- Simple Pin Programming or SPI Interface
- Input Range Extends from 0V to 5V
- Low Voltage Operation: 2.7V to 3.6V
- Shutdown and Mute Mode
- 4mm × 4mm QFN Package

LTC6603 features:

- Guaranteed Phase and Gain Matching Specs
- Programmable 9th Order Lowpass: 24 kHz to 2.5 MHz
- Programmable Gain (0dB/6dB/12dB/24dB)
- Simple Pin Programming or SPI Interface
- Input Range Extends from 0V to 5V
- Low Voltage Operation: 2.7V to 3.6V
- Shutdown Mode
- 4mm × 4mm QFN Package

DC1304 QUICK START GUIDE

QUICK TEST SETUP – PARALLEL CONTROL

QUICK TEST PROCEDURE

Test Procedure

1. Connect DC1304 as shown, turn on power and adjust the RBIAS1 pot for 50MHz.
2. Connect 50 ohm terminator to AIN-(J2) and sinewave generator to AIN+ (J1).
3. Connect oscilloscope to VOUTA+ and on the oscilloscope display must show a 1Vp-p sinewave.
4. Connect oscilloscope to VOUTA- and on the oscilloscope display must show a 1Vp-p sinewave.
5. Connect 50 ohm terminator to BIN-(J2) and sinewave generator to BIN+ (J1).
6. Connect oscilloscope to VOUTB+ and on the oscilloscope display must show a 1Vp-p sinewave.
7. Connect oscilloscope to VOUTB- and on the oscilloscope display must show a 1Vp-p sinewave.

DC1304 QUICK START GUIDE

LTC6602 FCLK AND FCUTOFF RANGE

FCLK Range, 24MHz to 90MHz

$RBIAS = (4.941 \cdot 10^9) / FCLK$; RBIAS in k

Example: If FCLK = 50 MHz Then

$RBIAS = (4.941 \cdot 10^9) / (50 \cdot 10^6) = 98.82k$

The Lowpass FCUTOFF = $FCLK / NLP$

The Highpass FCUTOFF = $FCLK / NHP$

NLP and NHP are the clock dividers set by the (LPF1, LPF0) and (HPF1, HPF0) inputs respectively.

LPF1	LPF0	NLP	HPF1	HPF0	NHP
0	0	600	0	0	6000
0	1	300	0	1	2000
1	0	100	1	0	1000
1	1	100	1	1	Bypass HPF

Lowpass Filter FCUTOFF Range

NLP	Range
100	240kHz – 900kHz
300	80kHz – 300kHz
600	40kHz – 150kHz

Highpass Filter FCUTOFF Range

NHP	Range
1000	24kHz – 90kHz
2000	12kHz – 45kHz
6000	4kHz – 15kHz

LTC6602 FCLK AND FCUTOFF RANGE

FCLK Range, 12MHz to 80MHz

$RBIAS = (2.472 \cdot 10^9) / FCLK$; RBIAS in k

Example: If FCLK = 50 MHz Then

$RBIAS = (2.472 \cdot 10^9) / (50 \cdot 10^6) = 49.44k$

The Lowpass FCUTOFF = $FCLK / NLP$

NLP clock divider set by the (LPF1, LPF0) inputs.

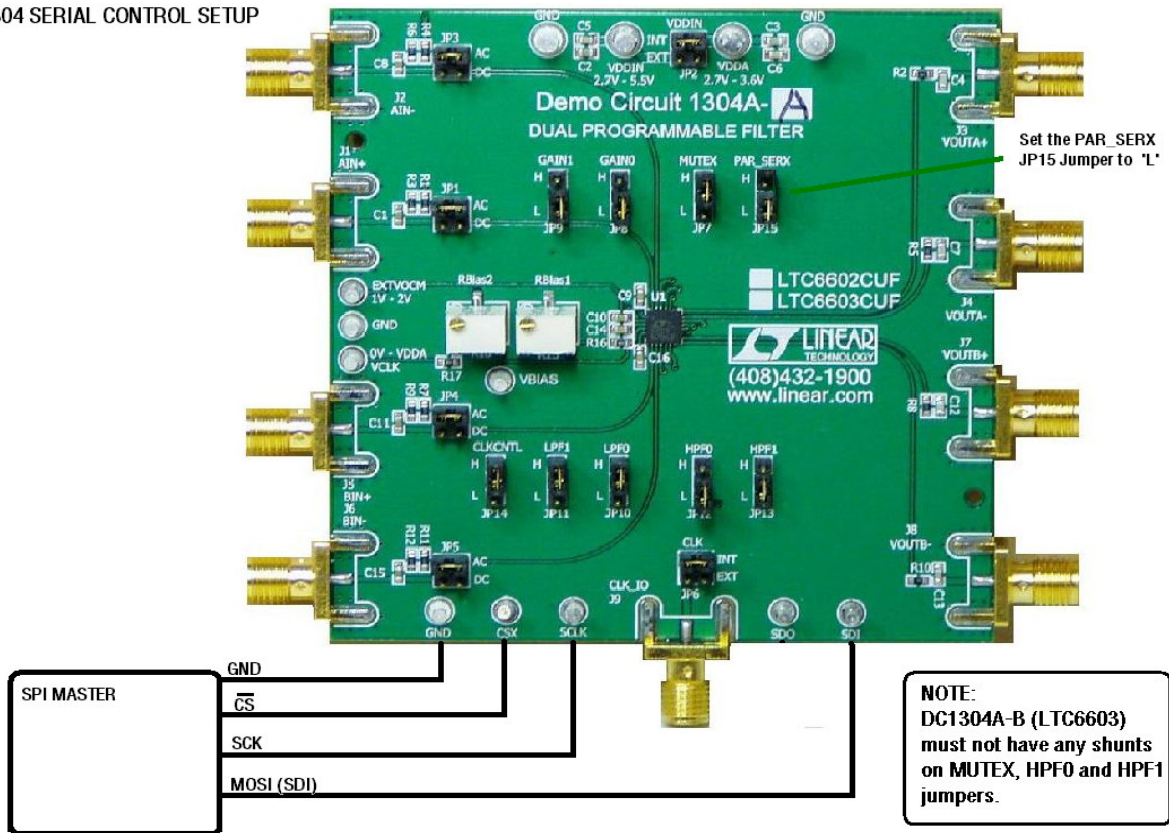

LPF1	LPF0	NLP
0	0	512
0	1	128
1	0	32
1	1	32

Lowpass Filter FCUTOFF Range

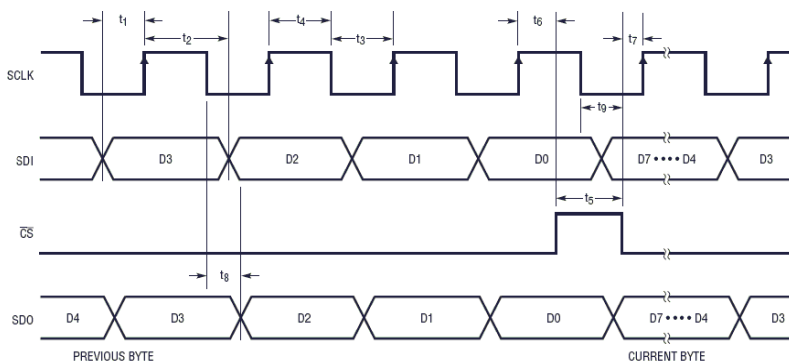

NLP	Range
32	375kHz – 2.5MHz
128	93.75kHz – 625kHz
512	23.44kHz – 156.25kHz
