

LTC3892EFE-1

PolyPhase High V_{OUT} Synchronous Buck Converter

DESCRIPTION

Demonstration circuit 2190A is a high output voltage, high efficiency synchronous PolyPhase[®] buck converter featuring the LTC[®]3892EFE-1. This demo circuit is available in two versions. The input voltage range of both versions is from 16V to 55V. The DC2190A-A is configured using two each LTC3892EFE-1 devices with 4-phase interleaving operation which provides a 12V/60A output, while the DC2190A-B is configured using one LTC3892EFE-1 device with 2-phase interleaving operation which provides a 12V/30A output.

Both boards have a mode selection jumper that allows the converter to run in forced CCM mode, pulse-skip mode or Burst Mode[®] operation. Synchronization to an external clock (frequency range 100kHz to 300kHz) is also possible on this board.

The demo circuit senses inductor current with a sense resistor but also has an optional DCR sense circuit that allows using the inductor's DCR as the current sensing element to save cost, footprint and improve efficiency.

The LTC3892EFE-1 data sheet gives a complete description of these parts, operation and application information and must be read in conjunction with this quick start guide for DC2190A.

Design files for this circuit board are available at <http://www.linear.com/demo/DC2190A>

PERFORMANCE SUMMARY

Specifications are at $T_A = 25^\circ\text{C}$

DC2190A-B

SYMBOL	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
V_{IN}	Input Supply Range		16		55	V
V_{OUT}	Output Voltage Range	$V_{IN} = 16\text{V to } 55\text{V}$, $I_{OUT} = 0\text{A to } 30\text{A}/2\text{-Phase}$	11.8	12	12.2	V
f_{SW}	Typical Free Running Switching Frequency			140		kHz
Efficiency	2-Phase Efficiency See Figure 3 for Efficiency Curves	$V_{IN} = 48\text{V}$, $V_{OUT1} = 12\text{V}$, $I_{OUT} = 30\text{A}$		97.2		%

DC2190A-A

SYMBOL	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
V_{IN}	Input Supply Range		16		55	V
V_{OUT}	Output Voltage Range	$V_{IN} = 16\text{V to } 55\text{V}$, $I_{OUT} = 0\text{A to } 60\text{A}/4\text{-Phase}$	11.8	12	12.2	V
f_{SW}	Typical Free Running Switching Frequency			140		kHz
Efficiency	4-Phase Efficiency See Figure 4 for Efficiency Curves	$V_{IN} = 48\text{V}$, $V_{OUT1} = 12\text{V}$, $I_{OUT} = 60\text{A}$		97.2		%

DEMO MANUAL

DC2190A-A/DC2190A-B

QUICK START PROCEDURE

Demonstration circuit DC2190A is easy to set up to evaluate the performance of the LTC3892-1. Refer to Figure 1 for proper measurement equipment setup and follow the procedure below.

NOTE: When measuring the input or output voltage ripple, care must be taken to avoid a long ground lead on the oscilloscope probe. Measure the input or output voltage ripple by touching the probe tip directly across the V_{IN} or V_{OUT} and GND terminals or directly across relevant capacitor. See Figure 2 for proper scope probe technique.

1. Place jumpers in the following positions:

JP1: Int. SYNC

JP2: ON

JP3: Int. (DC2190A-A Only)

2. With power off, connect the input power supply to V_{IN} and GND. Connect the load to the output. The load current should be smaller than 60A for DC2190A-A and smaller than 30A for DC2190A-B.

3. Turn on the power at the input.

NOTE: Make sure that the input voltage is between 16V and 55V.

4. Check for the proper output voltages.

$$V_{OUT} = 11.8V \text{ to } 12.2V$$

NOTE: If there is no output, temporarily disconnect the load to make sure that the load is not set too high.

5. Once the proper output voltages are established, adjust the loads within the operating range and observe the output voltage regulation, ripple voltage, efficiency and other parameters.

FREQUENCY SYNCHRONIZATION AND MODE SELECTION

The DC2190A's mode selector allows the converter to run in FCC operation, pulse-skip operation, Burst Mode or be synchronizing to an external clock by changing the position of JP1 and JP3.

For synchronizing to an external clock source, apply the external clock from SYNC turret to GND.

Refer to Table 1 and to the data sheet for more details.

Table 1. Mode Selection and Synchronizing Operation Options

CONFIGURATION	JP1	JP3 (DC2190A-A ONLY)
Forced Continuous Conduction Operation	Int. SYNC	Int.
Pulse-Skip Mode Operation	Ext. SYNC/ Pulse-Skip.	Ext./Pulse-Skip
Burst Mode Operation	Burst	Ext./Pulse-Skip
Synchronize to Ext. Clock (Ext. Clock Apply to SYNC Turret)	Ext. SYNC/ Pulse-Skip	Ext./Pulse-Skip

OPTIONAL INDUCTOR DCR CURRENT SENSING

Demonstration circuit 2190A provides an optional circuit for inductor DCR current sensing. Inductor DCR current sensing uses the DCR of the inductor to sense the inductor current instead of discrete sense resistors. The advantages of DCR sensing are lower cost, reduced board space and higher efficiency, but the disadvantage is a less accurate current limit. If DCR sensing is used, be sure to select an inductor with sufficiently high saturation current or use an iron powder type material.

Refer to Table 2 for optional inductor DCR current sensing setup and to the data sheet for more details.

POWER THE EXTV_{CC} FROM EXTERNAL SUPPLY

The DC2190A EXTV_{CC} turret is tied to the 12V V_{OUT} by default. To power the EXTV_{CC} from external supply:

1. Remove the R7.

2. Solder a 16V, 1 μ F MLCC between EXTV_{CC} and GND turret.

3. Apply a DC voltage (<14V) between the EXTV_{CC} and GND turret, after the input voltage is established. Ensure that $EXTV_{CC} \leq V_{IN}$.

DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

Please read the DEMO BOARD manual prior to handling the product. Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
