

# LTC3789EGN

## 300W 2-Phase Interleaved Synchronous Buck-Boost Converter

### DESCRIPTION

Demonstration circuit 2253A is a high power, high efficiency, 2-phase interleaved synchronous buck-boost converter with a 6V to 36V input range. It can supply a 25A maximum load current with a 12V output. This demo board features 2x LTC3789EGN controllers.

The **LTC<sup>®</sup>3789** is a high performance current-mode buck-boost switching regulator controller that operates from input voltages above, below or equal to the output voltage, while an output current feedback loop provides support for output current limit and battery charging. With a wide 4V to 38V (40V maximum) input and output range and seamless, low noise transitions between operating regions, the LTC3789 is ideal for automotive, telecom and battery-powered systems.

The light load operating mode of the controller is determined through the MODE/PLLIN pin. By default, the forced continuous mode (CCM) operation is pre-selected on this demo board. Switching frequency is preset at about 200kHz. Two paralleling schemes are available for this demo board and by default the method of shared I<sub>TH</sub> pins is adopted. Please refer to the Quick Start Procedure section for the optional Master-Slave paralleling scheme. To shut down the converter, force the RUN pin below 1.2V (JP1: OFF) Please refer to LTC3789 data sheet for more detailed information.

**Design files for this circuit board are available at <http://www.linear.com/demo/DC2253A>**

### PERFORMANCE SUMMARY Specifications are at T<sub>A</sub> = 25°C

PARAMETER	CONDITION	VALUE
Input Voltage Range		6V to 36V
Output Voltage, V <sub>OUT</sub>	V <sub>IN</sub> = 6V to 36V, I <sub>OUT</sub> = 0A to 25A	12V ±2%
Maximum Output Current, I <sub>OUT</sub>	V <sub>IN</sub> = 6V to 36V, V <sub>OUT</sub> = 12V	25A
Typical Output Ripple	V <sub>IN</sub> = 36V, I <sub>OUT</sub> = 25A (20MHz BW) V <sub>IN</sub> = 12V, I <sub>OUT</sub> = 25A (20MHz BW) V <sub>IN</sub> = 6V, I <sub>OUT</sub> = 25A (20MHz BW)	36mV <sub>p-p</sub> 200mV <sub>p-p</sub> 380mV <sub>p-p</sub>
Typical Efficiency	V <sub>IN</sub> = 12V, V <sub>OUT</sub> = 12V, I <sub>OUT</sub> = 25A, see Figure 3	97.8%
Typical Switching Frequency		200kHz

## QUICK START PROCEDURE

Demonstration circuit 2253A is easy to set up to evaluate the performance of the LTC3789EGN. Refer to Figure 1 for the proper measurement equipment setup and follow the procedure below:

1. With power off, connect the input power supply to  $V_{IN}$  (6V to 36V) and GND (input return).
2. Connect the 12V output load between  $V_{OUT}$  and GND (Initial load: no load).
3. Connect the DVMs to the input and output. Set the default jumper position, JP1: ON.
4. Turn on the input power supply and check for the proper output voltages.  $V_{OUT}$  should be  $12V \pm 2\%$ .
5. Once the proper output voltages are established, adjust the loads within the operating range and observe the output voltage regulation, ripple voltage and other parameters.

Note: When measuring the output or input voltage ripple, do not use the long ground lead on the oscilloscope probe. See Figure 2 for the proper scope probe technique. Short, stiff leads need to be soldered to the (+) and (-) terminals of an output capacitor. The probe's ground ring needs to touch the (-) lead and the probe tip needs to touch the (+) lead.

## Optional Master-Slave Paralleling Scheme

Besides the default paralleling scheme by tying the  $I_{TH}$  pins together, another optional Master-Slave scheme can be achieved on the demo board to obtain a better sharing of the inductor currents and output currents between phases. Please refer to the schematic in Page 8. To implement it,

1. Remove R67, R69 and R70.
2. Populate R68, R71 with  $0\Omega$ .
3. Set  $R_{FB3}$  5~10% higher than  $R_{FB1}$  and set  $R_{FB4} = R_{FB2}$ .
4. Choose the current reference divider R65 and R66 so that when the  $V_{out}$  is regulated, the voltage drop on R65 is equal to  $V_{ILIM}$ , where  $V_{ILIM}$  is the output current limit threshold voltage. For example, when  $I_{LIM}$  pin is grounded,  $V_{ILIM} = 50mV$ . For  $V_{OUT} = 12V$ , select  $R65 = 100\Omega$  and  $R66 = 24k\Omega$  and then the voltage drop on R65 will be 50mV.

## DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

**Please read the DEMO BOARD manual prior to handling the product.** Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
