

60V Synchronous 4-Switch Buck-Boost Led Controller with Spread Spectrum

DESCRIPTION

Demonstration circuit 2345A is a 60V synchronous 4-switch buck-boost LED controller with spread spectrum featuring the **LT[®]8391** LED driver. It accepts an input voltage from 4V to 60V and drives a single string of LEDs up to 25V at 2A. DC2345A runs at 400kHz switching frequency without spread spectrum, but spread spectrum frequency modulation (SSFM) can be enabled with a simple jumper. SSFM spreads the switching frequency to $f_{sw} \pm 15\%$ for reduced EMI.

The LT8391 has a wide input voltage range down to 4V and up to 60V. It has adjustable switching frequency between 150kHz and 600kHz. There is a simple jumper option for external frequency synchronization, spread spectrum frequency modulation, or neither.

The LT8391 can be PWM dimmed with an external PWM signal and an internally-generated PWM signal. DC2345A has a jumper that can be set to switch between internally-generated PWM signal, externally-generated PWM signal, and no PWM signal (100% on). It can be analog dimmed with a control voltage on either of its two control pins. LT8391 features both open LED and short LED (LED+ to GND) protection as well as a fault output flag.

When run with both PWM dimming and spread spectrum, the spread spectrum aligns itself with the PWM signal for flicker-free operation.

Small ceramic input and output capacitors are used to save space and cost. The board is designed with capacitors on

both sides of the synchronous switches for a reduction in radiated EMI. The open LED overvoltage protection uses the IC's constant voltage regulation loop to regulate the output to approximately 29.7V if the LED string is opened although it may reach 32V peak during transient from running LEDs to open. There is a protection diode from LED+ to GND to prevent negative ringing during a short-circuit with long wires.

Undervoltage lockout can be adjusted on the circuit with a few simple resistor choices.

There is an EMI filter on the input of DC2345A. This filter has a 3.2 μ H inductor and two 4.7 μ F capacitors. It is effective in reducing the conducted EMI in the AM band to pass CISPR25 class 5 regulations. When run with SSFM, DC2345A has low conducted EMI.

The LT8391 data sheet gives a complete description of the part, operation and applications information. The data sheet must be read in conjunction with this Demo Manual for demonstration circuit DC2345A. The LT8391EFE is assembled in a 28-lead plastic TSSOP (FE) package with a thermally enhanced ground pad. Proper board layout is essential for maximum thermal performance. See the data sheet section 'Layout Considerations'.

Design files for this circuit board are available at <http://www.linear.com/demo/DC2345A>

DEMO MANUAL DC2345A

PERFORMANCE SUMMARY Specifications are at $T_A = 25^\circ\text{C}$

PARAMETER	CONDITIONS	MIN	TYP	MAX
Input Voltage EMIVIN Range	Operating $V_{LED} = 25\text{V}$	4V		60V
Switching Frequency	$R3 = 100\text{k}$		400kHz	
I_{LED}	$R1 = 0.05\Omega$ $7.0\text{V} < PV_{IN} < 60\text{V}$ $V_{LED} = 25\text{V}$		2.0A	
V_{LED} range	$R5 = 1\text{M}$ $R6 = 34.8\text{k}$			26V
Open LED Voltage V_{OUT}	$R5 = 1\text{M}$ $R6 = 34.8\text{k}$		29.7V	
Typical Efficiency (100% PWM DC)	$PV_{IN} = 14\text{V}$ $V_{LED} = 25\text{V}$ $I_{LED} = 2.0\text{A}$		97%	
Internally-Generated PWM Dimming Range	Operating $JP3 = \text{INT}$ $JP1 = \text{INT}$	1/128		100%
Internally-Generated PWM Dimming Frequency	Operating $JP3 = \text{INT}$ $JP1 = \text{INT}$ $R16 = 200\text{k}$		200Hz	
Peak Switch Current Limit Boost Region	$R2 = 0.004\Omega$		12.5A	
Peak Switch Current Limit Buck Region	$R2 = 0.004\Omega$		12.5A	

QUICK START PROCEDURE

Demonstration circuit DC2345A is easy to set up to evaluate the performance of the LT8391. Follow the procedure below:

1. With power off, connect a string of LEDs that will run with forward voltage less than or equal to 25V (at 2A) to the LED+ and GND banana jacks on the PCB as shown in Figure 1.
2. Connect the EN/UVLO terminal to GND.
3. Set JP1 to EXT/ON and JP3 to ON for 100% always-on LED operation. Set JP2 to NO SPREAD/SYNC to run without SSFM or external synchronization.
4. With power off, connect the input power supply to the EMIVIN and GND banana jacks. Make sure that the DC input voltage will not exceed 60V.
5. Turn the input power supply on and make sure the voltage is between 4V and 60V for proper operation.
6. Release the EN/UVLO-to-GND connection.
7. Observe the LED string running at the programmed LED current.
8. To change the brightness with analog dimming, simply attach a voltage source to either the CTRL1 or CTRL2 terminal and set the voltage between 0V and 1.5V. See data sheet for details.
9. To change brightness with external PWM dimming, set JP1 to EXT/ON and JP3 to EXT. Attach a 3V rectangular waveform with varying duty cycle to the PWM terminal.
10. To change brightness with internally-generated PWM dimming, set JP1 to INT and JP3 to INT. Adjust the setting of the VR1 variable resistor with a small flat-head screwdriver to toggle between 0% and 100% PWM dimming duty cycle in 1/128 steps.
11. To enable spread spectrum frequency modulation, set JP2 to SPREAD ON.

QUICK START PROCEDURE

DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

Please read the DEMO BOARD manual prior to handling the product. Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
