

## 1 Features

- Designed for 2.4 GHz applications: Bluetooth®, Wi-Fi® (802.11b/g), ZigBee®, etc.
- Easy to integrate
- Low profile design for use with no ground beneath the antenna
- High efficiency
- Light weight
- Intended for SMD mounting
- Supplied in tape on reel

## 2 Description

Impexa is intended for use with all 2.4 GHz applications. The antenna uses a ground plane in order to radiate efficiently, but this ground plane must not extend underneath the antenna itself.

The antenna has the feed location on the left of the antenna.

## 3 Applications

- Mobile phones
- PDAs
- PNDs
- Headsets
- PMPs / MP3s
- Laptops
- PC-Cards
- Sensors

## 4 Part numbers

### Impexa A6150

## 5 General data

Product name	Impexa 2.4 GHz
Part Number	A6150
Frequency	2.4 – 2.5 GHz
Polarization	Linear
Operating temperature	-40 °C to +85 °C
Impedance with matching	50 Ω
Weight	0.05 g
Antenna type	SMD
Dimensions	6.1 x 3.9 x 1.1 [mm]

## 6 Electrical characteristics

	Typical performance	Conditions
Peak gain	1.0 dBi	All data measured on Antenna's reference boards, part numbers A6150-U1 and A6250-U1  Data given for the 2.4 – 2.5 GHz frequency range
Average gain	-1.9 dBi	
Average efficiency	65%	
Maximum Return Loss	-10 dB	
Maximum VSWR	1.9:1	

# 7 Electrical performance

## 7-1 Return Loss

## 7-2 VSWR

7-3 Antenna patterns

Patterns show combined polarisations  
 measured on reference board A6150-U1

## 8 Antenna dimensions

### Impexa

YY=Year WW=Week No.

L	W	H
Length	Width	Height
$6.1 \pm 0.2$	$3.9 \pm 0.2$	$1.1 \pm 0.2$

Dimensions in mm

## 9 Antenna footprint

### Impexa (Part No: A6150)

\* CAD files of the antenna footprint are available to download from [www.antenna-m2m.com](http://www.antenna-m2m.com)

J	K	O	S	T
$1.3 \pm 0.1$	$3.4 \pm 0.1$	$\geq 0.5 \pm 0.1$	$1 \pm 0.1$	$1 \pm 0.1$

Dimensions in mm

Dimension O stated is a minimum. Depending on the application, it can be increased to optimise the antenna performance. For more details, please contact [sales@antenna-m2m.com](mailto:sales@antenna-m2m.com)

## 10 Electrical interface

### 10-1 Transmission lines

- All transmission lines should be designed to have a characteristic impedance of  $50 \Omega$
- The length of the transmission lines should be kept to a minimum
- Any other parts of the RF system like transceivers, power amplifiers, etc, should also be designed to have an impedance of  $50 \Omega$

Once the material for the PCB has been chosen (PCB thickness and dielectric constant), a coplanar transmission line can easily be designed using any of the commercial software packages for transmission line design. For the chosen PCB thickness, copper thickness and substrate dielectric constant, the program will calculate the appropriate transmission line width and gaps on either side of the track so the characteristic impedance of the coplanar transmission line is  $50 \Omega$ .

### 10-2 Matching circuit

The antenna requires a matching circuit that must be optimized for each customer's product. The matching circuit will require up to three components and the following pad layout should be designed into the device so the correct circuit can be installed.

The antenna feed pad is indicated in the drawing above. Additional pads are for mechanical attachment only and should not be grounded.

In addition to the matching circuit, a separate DC blocking capacitor will also be required between the radio and the antenna matching circuit.

**Note: The component values for the matching circuit will vary depending on the size of the PCB and surrounding components.** The impedance of the antenna should be measured before selecting suitable matching components. Antenova M2M offers this service on request. Contact [sales@antenova-m2m.com](mailto:sales@antenova-m2m.com) for further information.

### 10-3 Antenna placement

Antenova M2M strongly recommends placing the antenna near the edge of the board. Maximum antenna performance is achieved by placing the antenna towards one of the corners of the PCB.

Additional ground and components near the antenna should be at a distance of at least 2 mm. Where possible the antenna should be clear of ground from both sides, although the antenna can work well with a minimum clearance of  $D \geq 2$  mm as shown in the drawing above.

## 10-4 Reference boards

The reference boards have been designed for evaluation purposes of Impexa 2.4 GHz and they include a SMA female connector

### Impexa Part No. A6150-U1

Dimensions in mm

To order a reference board contact [sales@antenna-m2m.com](mailto:sales@antenna-m2m.com).

## 11 Soldering

This antenna is suitable for lead free soldering.

The reflow profile should be adjusted to suit the device, oven and solder paste, while observing the following conditions:

- The maximum temperature should not exceed 240 °C
- However for lead free soldering, a maximum temperature of 255 °C for no more than 20 seconds is permitted.
- The antenna should not be exposed to temperatures exceeding 120 °C more than 3 times during the soldering process.

## 12 Hazardous material regulation conformance

The antenna has been tested to conform to RoHS requirements. A certificate of conformance is available from Antenova M2M's website.

## 13 Packaging

### 13-1 Optimal storage conditions for packaged reels

<b>Temperature</b>	-10°C to 40°C
<b>Humidity</b>	Less than 75% RH
<b>Shelf Life</b>	18 Months
<b>Storage place</b>	Away from corrosive gas and direct sunlight
<b>Packaging</b>	Reels should be stored in unopened sealed manufacturer's plastic packaging.

**Note: Storage of open reels of antennas is not recommended due to possible oxidization of pads on antennas. If short term storage is necessary, then it is highly recommended that the bag containing the antenna reel is re-sealed and stored in like storage conditions as in above table.**

## 13-2 Tape characteristics
