### HALL EFFECT

$i$  : current in conductor  
→ needs supply  
 $B$  : field generated by magnet  
 $V$  : voltage « result »

Hall effect = contactless => long life

### APPLICATIONS

#### IH Switch

This rugged switch is designed to be subjected to a repetitive jogging in harsh environments. The IHS is recommended for applications where the switch is often activated. For example, in applications where positioning the load is critical: material handling, loaders, lifts trucks, buckets and shovels ...

#### IH Linear

This rugged switch is intended for applications where a simple On /Off control is not sufficient and where a linear output is preferable. Typical use of IHL: applications where operators need to control motion and speed. This switch is ideal for control valves or variable speed drives and can be used in various applications including industrial controls, heavy duty equipment and handling.

#### A few applications
