ADDITIONNAL INFORMATION ON LED COMPONENTS

- Bi-color leds, by connecting the gold solder lug ${ }^{(+)}$one color is produced, by reversing the supply voltage another color is produced - Bi-colors are available up to 28 VDC. [AC products not available]
- The tri-color led has red and green leds when both are connected yellow is produced
- The operating voltage must not be exceeded by more that $10 \%$ as this will result in reduced life expectancy
- Luminous intensity is measured at 20 mA on a discrete led unless otherwise stated.
- Luminous intensities and color shades of white LEDs may vary within a batch.
- Luminous intensity will be reduced with lower operating current.
