Pin 3 open; or V > Vin - 0.5 V Pin 3 GND; or V < 0.8 V (min - 0.2 V).

See Figure 1 for safe operating curve.

- A 1,000 µF electrolytic input capacitor is required for proper operation. The capacitor must be rated for a minimum of 700 mA rms of ripple
- An external output capacitor is not required for basic operation. Adding 330 µF of distributed capacitance at the load will improve the transient response.
- 1 A/µs load step, 50 to 100% I $_{omax}$, C_{out} = 330 µF. If utilized Vout will track applied voltage by ±0.3 V (up to Vo set point). The pre-bias start-up feature is not compatible with Auto-Track™. This is because when the module is under Auto-Track™ control, it is fully active and will sink current if the output voltage is below that of a back-feeding source. Therefore to ensure a pre-bias hold-off, one of the following two techniques must be followed when input power is first applied to the module. The Auto-Track[™] function must either be disabled, or the module's output held off using the Inhibit pin. Refer to Application Note 156 for more details.
- Tape and reel packaging only available on the surface-mount versions. To order Pb-free (RoHS compatible) surface-mount parts replace the mounting option 'S' with 'Z', e.g. PTH05020WAZ. To order Pb-free (RoHS compatible) through-hole parts replace the mounting option 'H' with 'D', e.g. PTH05020WAD.
