## ■ Operation Timing Diagram

※The waveform of 'Operation indicator' and 'Transistor output' are for Light ON operation.  
The waveform are reversed for Dark ON operation.

## ■ Installation and Adjustment

### ◎ For mounting

Please use bolts M2 for mounting this sensor and the tightening torque is under 0.3 N·m.

※Do not impact on the unit with hard objects and do not bend the cable part too much. It may cause damage to waterproof function.

#### ● Through-beam type

#### ● Diffuse reflective/BGS reflective type

### ※ Notice for BGS reflective type

1) Make sure that the sensing side of this sensor is parallel with the surface of each sensing object.

2) If the sensing object has glossy surface or high reflection, the sensor tilts from 5 to 10° as shown in the figure.

Make sure whether the sensor is influenced by any background objects.

3) Make sure to install the sensor in the proper direction with considering moving direction of sensing objects. Refer to the following.

### ◎ Optical axis adjustment

#### ● Through-beam type

Set the emitter and the receiver facing each other and adjust these up-down, right-left after checking the point of operating the stability indicator. Fix the emitter and the receiver at the center of the point.

#### ● Diffuse reflective/BGS reflective type

After placing a sensing target, fix it in the middle of position where the stability indicator operates when adjusting the sensor to up-down, right-left. Make sure that the sensing side of the sensor is parallel with the surface of each sensing target.
