■ The Characteristic of Spatter-Resistance Type

The hot arc from arc welding machine is adhesive even with metals or plastics. Therefore, normal proximity sensor might have malfunction even though there are no sensing object if the arcs are put on the sensing surface. The arcs are not adhered on the sensing part of the spatter-resistance type proximity sensor as the part is coated with PTFE against thermal resistance.

Also, the protection cover sold optionally has the same function.

■ Durability Test

Highly resistant to the impact of removing welding sludge attached to the sensing face

◎ Continuous hitting test

Test conditions

Hitting object: 1.3kg of weight
 Hitting speed: 48 times per 1 min
 The number of hitting times: 300 thousand times
 Test model: PRFAW18

■ Electromagnetic Resistance Test

Large current from welding generates magnetic field which can affect the proximity sensor to malfunction due to noise. This product, however, can be used near strong noise without malfunctioning, thanks to excellent electromagnetic resistance. This test is conducted in the environment of welding.

Test conditions

Welding current: 13,000A
 Installation direction: front and side
 Test model: PRFAW Series

Diameter of sensing side	Minimum sensing distance between weld and sensor	
	Front	Side
12mm	30mm	60mm
18mm	10mm	50mm
30mm	120mm	120mm

※ Minimum sensing distance can be different by welding environment.

■ Effect of Aluminum Scraps

When aluminum scraps are attached or stacked at sensing side, the proximity sensor does not detect and sensing signal is OFF. However, the below cases may occur to sensing signal. In this case, remove the scraps.

- (1) When the size of aluminum scraps (d) is bigger than 2/3 of the sensing side size (D)
 (2) When aluminum scraps are attached on the sensing side by external pressure

Model	Size	D (mm)

■ Proper Usage

◎ Load connections

When using DC 2-wire type proximity sensor, the load must be connected, otherwise internal components may be damaged. The load can be connected to either wire.

◎ In case of the load current is small

● DC 2-wire type

$$R \leq \frac{V_s}{I_o - I_{off}} \text{ (k}\Omega\text{)} \quad P > \frac{V_s^2}{R} \text{ (W)}$$

[Vs: Power supply, I_o: Min. action current of proximity sensor, I_{off}: Return current of load, P: Number of Bleeder resistance watt]

Please make the current on proximity sensor smaller than the return current of load by connecting a bleeder resistor in parallel.

※W value of Bleeder resistor should be bigger for proper heat dissipation.

◎ Mutual-interference & Influence by surrounding metals

When several proximity sensors are mounted close to one another a malfunction of the may be caused due to mutual interference. Therefore, be sure to keep a minimum distance between the two sensors as below chart indicates.

When sensors are mounted on metallic panel, it is required to protect the sensors from being affected by any metallic object except target. Therefore, be sure to provide a minimum distance as below chart indicates.
