## Over-Voltage Protection Load Switch with Surge Protection

## FEATURES

- Highly reliable $1.3 \mathrm{~mm} \times 1.8 \mathrm{~mm}$ FCQFN-12 package
- Surge protection
$>$ IEC 61000-4-5: > 120V
- Integrated low Rdson nFET switch: typical $27 \mathrm{~m} \Omega$
- 5A continuous current capability
- Default Over-Voltage Protection (OVP) threshold
> AW32901:5.95V
$>$ AW32902: 6.2V
> AW32905: 6.8V
$>$ AW32909: 9.98V
> AW32910: 10.5 V
> AW32912:14V
- OVP threshold adjustable range: 4 V to 20 V
- Input system ESD protection
$>$ IEC 61000-4-2 Contact discharge: $\pm 8 \mathrm{kV}$
$>$ IEC 61000-4-2 Air gap discharge: $\pm 15 \mathrm{kV}$
- Input maximum voltage rating: 29VDC
- Fast turn-off response: typical 50 ns
- Over-Temperature Protection (OTP)
- Under-Voltage Lockout (UVLO)

## APPLICATIONS

- Smartphones
- Tablets
- Charging Ports

## GENERAL DESCRIPTION

The AW329xx family OVP load switch features surge protection, an internal clamp circuit protects the device from surge voltages up to 120 V .

The AW329xx features an ultra-low $27 \mathrm{~m} \Omega$ (typ.) Rdson nFET load switch. When input voltage exceeds the OVP threshold, the switch is turned off very fast to prevent damage to the protected downstream devices. The IN pin is capable of withstanding fault voltages up to $29 \mathrm{~V}_{\mathrm{Dc}}$.

The default OVP threshold is 5.95 V (AW32901), 6.2V (AW32902), 6.8V (AW32905), 9.98V (AW32909), 10.5V (AW32910) and 14 V (AW32912), the OVP threshold can be adjusted from 4 V to 20 V through external OVLO pin.

The device features an open-drain output $\overline{\mathrm{ACOK}}$, when $\mathrm{V}_{\mathbb{I N} \text { _UVLo }}<\mathrm{V}_{\mathbb{I N}}<\mathrm{V}_{\mathbb{I N}}$ oveo and the switch is on, $\overline{\mathrm{ACOK}}$ will be driven low to indicate a good power input, otherwise it is high impedance.

This device features over-temperature protection that prevents itself from thermal damaging.

The AW329xx is available in a RoHS compliant $1.3 \mathrm{~mm} \times 1.8 \mathrm{~mm}$ FCQFN-12 package.

## TYPICAL APPLICATION CIRCUIT

Figure 1 AW329XX typical application circuit
$\mathrm{R}_{1}$ and $\mathrm{R}_{2}$ are used for OVP threshold adjustment, to use default OVP threshold, connect OVLO to ground.

## DEVICE COMPARISON TABLE

| Device | Vin＿ovlo（V） |  |  |  | Vin＿ovlo hysteresis（mV） |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Condition | Min． | Typ． | Max． |  |
| AW32901 | VIN rising | 5.83 | 5.95 | 6.07 | 130 |
| AW32902 | VIN rising | 6.08 | 6.20 | 6.32 | 130 |
| AW32905 | Vin rising | 6.66 | 6.80 | 6.94 | 140 |
| AW32909 | VIN rising | 9.78 | 9.98 | 10.18 | 210 |
| AW32910 | VIN rising | 10.29 | 10.50 | 10.71 | 210 |
| AW32912 | VIN rising | 13.7 | 14.0 | 14.3 | 280 |

## PIN CONFIGURATION AND TOP MARK

Figure 2 Pin Configuration and Top Mark

## PIN DEFINITION

| Pin | Name | Description |
| :---: | :---: | :--- |
| A1 | $\overline{\mathrm{EN}}$ | Enable pin，active low |
| B1 | $\overline{\text { ACOK }}$ | Power good flag，active－low，open－drain |
| C1 | OVLO | OVP threshold adjustment pin |
| C2，C3，B3 | IN | Switch input and device power supply |
| A2，A3，B2 | OUT | Switch output |
| A4，B4，C4 | GND | Device ground |

## FUNCTIONAL BLOCK DIAGRAM

Figure 3 Functional Block Diagram

## TYPICAL APPLICATION CIRCUITS

Figure 4 AW329XX typical application circuit（using default OVP threshold）

Figure 5 AW329XX typical application circuit（using external resistors set OVP threshold）

## Notice for Typical Application Circuits：

1．If VBUS is required to pass surge voltage greater than 120 V ，external TVS is needed，the maximum clamping voltage of the TVS should be below 34 V ．

2．When the default OVP threshold is used，connect OVLO pin to GND directly or through a $0 \Omega$ resistor． OVLO pin cannot be left floating．

3．If $R_{1}$ and $R_{2}$ are used to adjust the OVP threshold，it is better to use $1 \%$ precision resistors to improve the OVP threshold precision．
4．If $\overline{\mathrm{ACOK}}$ is not used，it can be left floating，or short to GND．
5．$\quad \mathrm{C}_{\mathbb{N}}=0.1 \mu \mathrm{~F}$ is recommended for typical application，larger $\mathrm{C}_{\mathbb{N}}$ is also acceptable．The rated voltage of $\mathrm{C}_{\mathbb{N}}$ should be larger than the TVS maximum clamping voltage，if no TVS is applied and only AW329XX is used，the rated voltage of $\mathrm{C}_{\text {IN }}$ should be 50 V ．

6．Cout $=1 \mu \mathrm{~F}$ is recommended for typical application，larger Cout is also acceptable．The rated voltage of Cout should be larger than the OVP threshold．For example，if the OVP threshold is 6.8 V ，the rated voltage of Cout should be 10 V or higher．

Figure 15 OVP Response（AW32905）

Figure 16 130V Surge Response（AW32905）

## FUNCTIONAL DESCRIPTION

## Device Operation

If the AW329xx is enabled and the input voltage is between UVLO and OVP threshold，the internal charge pump begins to work after debounce time，the gate of the nFET switch will be slowly charged high till the switch is fully on．$\overline{\text { ACOK }}$ will be driven low about 30 ms after $\mathrm{V}_{\mathrm{IN}}$ valid，indicating the switch is on with a good power input．If the input voltage exceeds the OVP trip level，the switch will be turned off in about 50 ns．If $\overline{\mathrm{EN}}$ is pulled high，or input voltage falls below UVLO threshold，or over－temperature happens，the switch will also be turned off．

## Surge Protection

The AW329xx integrates a clamp circuit to suppress input surge voltage．For surge voltages between Vin＿ovlo and $\mathrm{V}_{\mathrm{IN} \text {＿clamp，}}$ the switch will be turned off but the clamp circuit will not work．For surge voltages greater than Vin＿clamp，the internal clamp circuit will detect surge voltage level and discharge the surge energy to ground． The device can suppress surge voltages up to 120 V ．

## Over－Voltage Protection

If the input voltage exceeds the OVP rising trip level，the switch will be turned off in about 50 ns ．The switch will remain off until $\mathrm{V}_{\mathbb{N}}$ falls below the OVP falling trip level．

## OVP Threshold Adjustment

If the default OVP threshold is used，OVLO pin must be grounded．If OVLO pin is not grounded，and by connecting external resistor divider to OVLO pin as shown in the typical application circuit，between IN and GND， the OVP threshold can be adjusted as following：

$$
V_{\text {IN_OVLO }}=\frac{R_{1}+R_{2}}{R_{2}} V_{\text {OVLO_TH }}
$$

For example，if we select $R_{1}=1 \mathrm{M} \Omega$ and $R_{2}=100 \mathrm{k} \Omega$ ，then the new OVP threshold calculated from the above formula is 13.2 V ．The OVP threshold adjustment range is from 4 V to 20 V ．When the OVLO pin voltage Vovlo exceeds Vovlo＿sel（ 0.26 V typical），Vovlo is compared with the reference voltage Vovlo＿th（ 1.2 V typical）to judge whether input supply is over－voltage．

## $\overline{\text { ACOK Output }}$

The device features an open－drain output $\overline{\mathrm{ACOK}}$ ，it should be connected to the system I／O rail through a pull－ up resistor．If the device is enabled and $\mathrm{VIN}_{\text {IN }}$ UVLO $<\mathrm{VIN}_{\text {IN }}<\mathrm{VIN}_{\text {IN ovlo，}} \overline{\mathrm{ACOK}}$ will be driven low indicating the switch is on with a good power input．If OVP，UVLO，or OT occurs，or $\overline{\mathrm{EN}}$ is pulled high，the switch will be turned off and $\overline{\mathrm{ACOK}}$ will be pulled high．

## USB On－The－Go（OTG）Operation

If $\mathrm{V}_{\mathrm{IN}}=0 \mathrm{~V}$ and OUT is supplied by OTG voltage，the body diode of the load switch conducts current from OUT to IN and the voltage drop from OUT to IN is approximately 0.7 V ．When $\mathrm{V}_{\mathrm{IN}}>\mathrm{V}_{\text {IN＿UvLo，}}$ internal charge pump begins to open the load switch after debounce time（about 15ms）．After switch is fully on，current is supplied through switch channel and the voltage drop from OUT to IN is minimum．

## PCB LAYOUT CONSIDERATION

To make fully use of the performance of AW329XX，the guidelines below should be followed．
1．All the peripherals should be placed as close to the device as possible．Place the input capacitor C in on the top layer（same layer as the AW329XX）and close to IN pin，and place the output capacitor Cout on the top layer （same layer as the AW329XX）and close to OUT pin．

2．If external TVS is used，IN pin routing passes through the external TVS firstly，and then connect AW329XX．
3．Red bold paths on figure 4 and 5 are power lines that will flow large current，please route them on PCB as straight，wide and short as possible．

4．If $R_{1}$ and $R_{2}$ are used，route OVLO line on PCB as short as possible to reduce parasitic capacitance．
5．The power trace from USB connector to AW329XX may suffer from ESD event，keep other traces away from it to minimize possible EMI and ESD coupling．

6．Use rounded corners on the power trace from USB connector to AW329XX to decrease EMI coupling．

| :---: | :---: |
| Average ramp-up rate $\left(217^{\circ} \mathrm{C}\right.$ to Peak) | Max. $3^{\circ} \mathrm{C} / \mathrm{sec}$ |
| Time of Preheat temp.(from $150^{\circ} \mathrm{C}$ to $\left.200^{\circ} \mathrm{C}\right)$ | $60-120 \mathrm{sec}$ |
| Time to be maintained above $217^{\circ} \mathrm{C}$ | $60-150 \mathrm{sec}$ |
| Peak Temperature | $250-260^{\circ} \mathrm{C}$ |
| Time within $5^{\circ} \mathrm{C}$ of actual peak temp | $20-40 \mathrm{sec}$ |
| Ramp-down rate | Max. $6^{\circ} \mathrm{C} / \mathrm{sec}$ |
| Time from $25^{\circ} \mathrm{C}$ to peak temp | Max. 8 min |

NOTE:

1. All data are compared with the package-top temperature, measured on the package surface;
2. AW329XX adopted the Pb-Free assembly.

## REVISION HISTORY

| Vision | Date | Change Record |
| :---: | :---: | :--- |
| V0.9 | February 2018 | Datasheet V0.9 released |
| V1.0 | April 2018 | 1. Added Typical Characteristics. <br> 2. Added Tape and Reel Information. <br> 3. Added Solder Mask Details. <br> 4. Added Reflow Information. |
| V1.1 | September, 2018 | Storage Temperature Modified |

## DISCLAIMER

Information in this document is believed to be accurate and reliable. However, Shanghai AWINIC Technology Co., Ltd (AWINIC Technology) does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information.

AWINIC Technology reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. Customers shall obtain the latest relevant information before placing orders and shall verify that such information is current and complete. This document supersedes and replaces all information supplied prior to the publication hereof.

AWINIC Technology products are not designed, authorized or warranted to be suitable for use in medical, military, aircraft, space or life support equipment, nor in applications where failure or malfunction of an AWINIC Technology product can reasonably be expected to result in personal injury, death or severe property or environmental damage. AWINIC Technology accepts no liability for inclusion and/or use of AWINIC Technology products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

Applications that are described herein for any of these products are for illustrative purposes only. AWINIC Technology makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.
All products are sold subject to the general terms and conditions of commercial sale supplied at the time of order acknowledgement.

Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.

Reproduction of AWINIC information in AWINIC data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. AWINIC is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of AWINIC components or services with statements different from or beyond the parameters stated by AWINIC for that component or service voids all express and any implied warranties for the associated AWINIC component or service and is an unfair and deceptive business practice. AWINIC is not responsible or liable for any such statements.
