Over-Voltage Protection Load Switch

FEATURES

- Integrated low R_{dson} nFET switch: typical 29mΩ
- 4.5A continuous current capability
- Default Over-Voltage Protection (OVP) threshold
  - AW33801: 5.95V
  - AW33802: 6.2V
  - AW33805: 6.8V
  - AW33809: 9.98V
  - AW33812: 14V
- OVP threshold adjustable range: 4V to 20V
- Input maximum voltage rating: $35V_{DC}$
- Fast turn-off response: typical 90ns
- Over-Temperature Protection (OTP)
- Under-Voltage Lockout (UVLO)
- 1.245mm × 1.245mm WLCSP-9 package

APPLICATIONS

- Smartphones
- Tablets
- Charging Ports

GENERAL DESCRIPTION

The AW338XX features an ultra-low 29mΩ (typ.) R_{dson} nFET load switch. When input voltage exceeds the OVP threshold, the switch is turned off very fast to prevent damage to the protected downstream devices. The IN pin is capable of withstanding fault voltages up to $35V_{DC}$.

The default OVP threshold is 5.95V (AW33801), 6.2V (AW33802), 6.8V (AW33805), 9.98V (AW33809) and 14V (AW33812). The OVP threshold can be adjusted from 4V to 20V through external OVLO pin.

This device features over-temperature protection that prevents itself from thermal damaging.

The AW338XX is available in a RoHS compliant 9-bump 1.245mm × 1.245mm WLCSP.

ABSOLUTE MAXIMUM RATINGS (NOTE 1)

Symbol	Parameter	Condition	Min.	Max.	Unit
V_{IN}	Input DC voltage		-0.3	35	V
V_{IN_PUL}	Input peak pulse voltage	20μs pulse width, repeat 100 times		45	V
V_{OUT}	Output voltage		-0.3	See(NOTE 2)	V
V_{OVLO}	OVLO voltage		-0.3	7	V
I_{IN}	Switch current(NOTE 3)	Continuous current		4.5	A
T_A	Ambient temperature		-40	85	°C
T_J	Junction temperature		-40	150	°C
T_{STG}	Storage temperature		-65	150	°C
T_{LEAD}	Soldering temperature	At leads, 10 seconds		260	°C

NOTE1: Conditions out of those ranges listed in "absolute maximum ratings" may cause permanent damages to the device. In spite of the limits above, functional operation conditions of the device should within the ranges listed in "recommended operating conditions". Exposure to absolute-maximum-rated conditions for prolonged periods may affect device reliability.

NOTE2: 29V or VIN+0.3V, whichever is smaller.

NOTE3: Limited by thermal design.

THERMAL INFORMATION

Symbol	Parameter	Condition	Value	Unit
$R_{\theta JA}$	Thermal resistance from junction to ambient (NOTE 1)	In free air	85	°C/W

NOTE1: Thermal resistance from junction to ambient is highly dependent on PCB layout.

FUNCTIONAL DESCRIPTION

Device Operation

If the input voltage is between UVLO and OVP threshold, the internal charge pump begins to work after debounce time, the gate of the nFET switch will be slowly charged high till the switch is fully on. If the input voltage exceeds the OVP trip level, the switch will be turned off in about 90ns. If input voltage falls below UVLO threshold, or over-temperature happens, the switch will also be turned off.

Over-Voltage Protection

If the input voltage exceeds the OVP rising trip level, the switch will be turned off in about 90ns. The switch will remain off until V_{IN} falls below the OVP falling trip level.

OVP Threshold Adjustment

If OVLO pin is not grounded, and by connecting external resistor divider to OVLO pin as shown in the typical application circuit, between IN and GND, the OVP threshold can be adjusted as following:

$$V_{IN\_OVLO}=\frac{R_1+R_2}{R_2}V_{OVLO\_TH}$$

The adjustment range is 4V to 20V. When the OVLO pin voltage V_{OVLO} exceeds V_{OVLO_SEL}(0.26V typical), V_{OVLO} is compared with the reference voltage V_{OVLO_TH}(1.20V typical for AW33801/AW33805/AW33809/AW33812, 1.23V typical for AW33802) to judge whether input supply is over-voltage. Take AW33801 for example, if we select R_1 = 51kΩ and R_2 = 12.4kΩ, then the new OVP threshold calculated from the above formula is 6.14V.

USB On-The-Go (OTG) Operation

If V_{IN} = 0V and OUT is supplied by OTG voltage, the body diode of the load switch conducts current from OUT to IN and the voltage drop from OUT to IN is approximately 0.7V. When V_{IN} > V_{IN_UVLO}, internal charge pump begins to open the load switch after debounce time. After switch is fully on, current is supplied through switch channel and the voltage drop from OUT to IN is minimum.

PCB LAYOUT CONSIDERATION

To make fully use of the performance of AW338XX, the guidelines below should be followed.

1. All the peripherals should be placed as close to the device as possible. Place the input capacitor C_{IN} on the top layer (same layer as the AW338XX) and close to IN pin, and place the output capacitor C_{OUT} on the top layer (same layer as the AW338XX) and close to OUT pin.

2. Route the power line (shown in Figure 1) as widely and shortly as possible to reduce parasitic impedance.
