DPDT USB Switch With Over Voltage Protection

Features

USB 2.0 Hi-speed DPDT switch

• Typical -3dB bandwidth: 1.0 GHz

Over voltage protection: 4.8V typical

16V DC protection on D+ and D- Ports

+25V surge protection on D+ and D-

Supply voltage range: 2.7V to 5.5V

5Ω switch on-resistance typical

C_{ON}: 6pF typical

Icc: 35µA typical

FCQFN 1.5mm X2.0mm X0.55mm-10L package

General Description

The AW35742 is a Hi-Speed USB 2.0(480Mbps) DPDT (Double Pole Double Throw) switch with integrated protection for USB D+ and D-, it can be configured as a dual 1:2 or 2:1 switch.

The AW35742 protection on the D+/D- pins can tolerate up to 16V DC, when D+ or D- voltage is greater than the OVP(Over-Voltage Protection) threshold, the switch will be automatically shutoff to protect downstream devices.

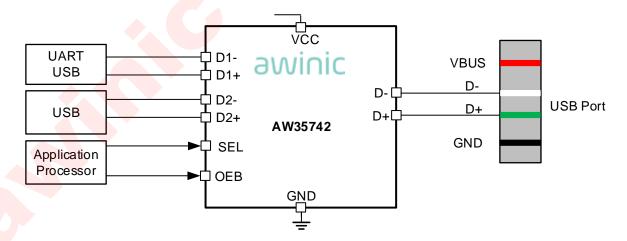

The device operates over 2.7V to 5.5V supply range.

The AW35742 is available in an FCQFN 1.5mm X2.0mm X0.55mm-10L package.

Applications

- Smartphones
- Tablets

Typical Application Circuits

Typical Application Circuit of AW35742

Notice for Typical Application Circuits:

- 1. The AW35742 has internal 7-M Ω pull down resistors on SEL and OEB, so no external resistors are required on the logic pins.
- 2. Internal pull-down resistor on SEL pins ensures the D1+ and D1- channels are selected by default.

Typical Characteristics

AW35742

Feb. 2019 V1.0

Detailed Functional Description

The AW35742 is a Hi-Speed USB 2.0 DPDT switch with integrated protection for USB D+ and D-, it can be configured as a dual 1:2 or 2:1 switch. The AW35742 will protect D+ and D- pins when stressed with voltages up to 16V. The device can pass signals with bandwidth 1GHz to maintain signal integrity and eye compliance.

Over-Voltage Protection

AW35742 is designed to protect the system from damage. Over-voltage event happens when voltage on D+/D- exceeds 4.8V(typ.), and device will activate OVP to disconnect the switches.

High Impedance Mode

When OEB is logic high, the AW35742 is in high impedance mode, all the signal paths are in Hi-Z state.

OEB	SEL	D- Connection	D+ Connection
Н	Х	High-Z	High-Z
L	L	D- to D1-	D+ to D1+
L	Н	D- to D2-	D+ to D2+

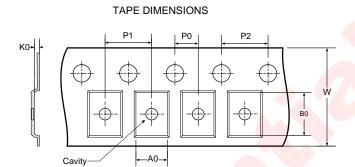

PCB Layout Consideration

To obtain the optimal performance of AW35742, PCB layout should be considered carefully. Here are some guidelines:

- 1. Place supply bypass capacitors as close to VCC pin as possible and avoid placing the bypass capacitors near the D+/D- traces.
- 2. The differential characteristic impedance of D+ and D- traces is suggested to be 90Ω , and it's better to shield D+ and D- traces by ground planes.
- 3. Route the high-speed USB signals using a minimum of vias and corners which reduces signal reflections and impedance changes.
- 4. Do not route USB traces under or near crystals, oscillators, clock signal generators, switching regulators, mounting holes, magnetic devices or ICs that use or duplicate clock signals.
- 5. Avoid stubs on the high-speed USB signals because they cause signal reflections.
- 6. Route all high-speed USB signal traces over continuous GND planes, with no interruptions.

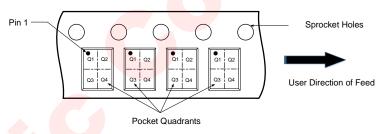

Tape And Reel Information

REEL DIMENSIONS D1

- A0: Dimension designed to accommodate the component width
- B0: Dimension designed to accommodate the component length
- K0: Dimension designed to accommodate the component thickness
- W: Overall width of the carrier tape
- P0: Pitch between successive cavity centers and sprocket hole
- P1: Pitch between successive cavity centers
- P2: Pitch between sprocket hole
- D1: Reel Diameter
 D0: Reel Width
