AZD026 – AZOTEQ USB-DONGLE OVERVIEW

Azoteq provides software used for serial streaming of data to a computer by utilising the Azoteq USB-dongles. Each IC has dedicated software which is intended for prototyping purposes.

1   Azoteq USB-dongle Usage

The Azoteq USB-dongles available for commercial use are listed in Table 1. The dongles are connected to a computer via a mini-USB (micro-USB for CT210A) cable and are used:
(Please Note: Use with USB data cable only)

- As an interface to program OTP[1] bits which are available on certain ICs (to customize an IC for a certain design), see tables Table 2 and Table 3 for pin assignment or

- to perform serial communication between the computer and IC via

    - 1-wire Communication Protocol (Table 5)

    - SPI (Table 6)

    - I^{2}C (Table 7)

- Flash programming (Table 8)

- Bootloader programming (Table 9)

Azoteq provides the software necessary for programming OTP bits. This software is known as USBProg which is intended for prototyping purposes. More information regarding USBProg can be found in application note AZD007.

Azoteq provides software used for serial streaming of data to a computer by utilising the Azoteq USB-dongles. Each IC has dedicated software which is intended for prototyping purposes. The software is available on the Azoteq website under Software and Tools.

Table 1 Azoteq USB-dongles

Azoteq dongle	Description	Device Supported	Data Streaming	Programming	Boot loading
CT210A	4th Generation programmer and data streamer	ALL	✓	✓	✓
CT210	3rd Generation programmer and data streamer	ALL	✓	✓	✓
DS100	Data Streaming Dongle	ALL	✓	✗	✓

Note: Ensure that V_{DDHI} and V_{REG} capacitors are connected as specified by the relevant datasheet for all programming.

3 Connecting USB-dongle for *Serial Communication*

Please refer to the datasheet and communication interface of the specific device for information regarding the communication protocol supported.

4 Flash Programming (CT210/CT210A)

The CT210/CT210A supports a programming protocol used to program certain flash MCU's (e.g. IQS550, IQS572, and IQS525). The dedicated software for flash programming is Azoteq Flash Programmer. The pinout to perform flash programming can be seen in Table 8.

5 Bootloader Programming (CT210/CT210A/DS100)

The CT210/CT210A/DS100 also supports programming via a bootloader on-chip for the IQS550, IQS572 and IQS525 ICs. The dedicated software for bootloader programming is Azoteq Flash Programmer. The pinout to perform bootloader programming can be seen in Table 9.

6 Revision History

Version	Release date	Change Notes
0.05	March 2011	Initial release
0.06	May 2012	An updated list of supported Azoteq USB dongles Added 2-series ICs (232/233/242/252) Consolidated 1-wire protocol Added CT220/CT210 Flash Programming pin connections
0.07	November 2015	Reformatted document to the latest Azoteq template Updated to reflect the current state of the CT210 and what devices are not supported anymore. Added programming with special connections for the IQS227AS, IQS228AS, IQS211, IQS231 Added I2C Boot loader programming pinout connections, section 5
0.08	April 2017	Added CT210A
0.09	August 2017	Added IQS333 I2C OTP
0.10	November 2017	Added: Use with USB data cable only Removed EOL items
0.11	January 2019	Corrected Table 2.1
0.12	April 2020	Various updates
