Serial to Single-mode Fiber Optic Converters

Models BB-FOSTCDRi-ST, BB-FOSTCDRi-SC

www.advantech.com

FEATURES

- Converts serial data signals to single-mode fiber, up to 15 km (9 mi) range
- 2000V 3-way optical isolation (input, output, power); EMI/RFI protection
- Data rates up to 115.2 kbps
- Wide operating temperature: -40 to +80 °C
- · DIN mount, IP30 plastic case
- UL 508 rated
- 10–48 VDC external power source required (not included, sold separately)
- Modbus ASCII/RTU compatible

Advantech ILinx™ fiber converters are designed with the functionality required for heavier industrial environments. These isolated converters change RS-232, RS-422 or RS-485 to single-mode fiber optics. Fiber optic connectors are SC or ST.

BB-FOSTCDRi-Sx models extend serial data ranges up to 15 km (9 mi) and provide the most versatile connection possible between asynchronous full or half-duplex serial equipment. In addition to direct point-to-point connectivity, it is capable of operating in multi-drop mode. This allows one serial device to communicate with up to 31 others around a fiber optic ring. Since it supports mixed serial standards, it can replace other converters and isolators and add the EMI/RFI immunity inherent to fiber optic communications.

The Automatic Send Data Control circuit controls the RS-422/485 driver chip, eliminating the need for special software. Easy to install and configure, it has a 12-position DIP switch to set up RS-422/485 parameters and removable terminal blocks to connect serial signals and power. In RS-232 mode, it supports Transmit Data and Receive Data. Handshaking signals are not passed through.

An external 10-48 VDC power source is required (not included, sold separately).

BB-FOSTCDRi-ST	Terminal Blocks, removable	Single-mode ST	~

ACCESSORIES - sold separately

BB-MDR-20-24 - 24 Vdc @ 1.0 A DIN rail mount power supply, slim-line

BB-SMI18-12-V-ST - 12 Vdc @ 1.6A power supply, stripped/tinned, international blades

BB-TBKT1 - Replacement Terminal Block - 2-position, 5.08mm, 8A, 30

BB-TBKT2 - Replacement Terminal Block - 5-position, 5.08mm, 8A, 30

Fiber Optic Benefits

Fiber optic cable carries serial data up to 15 kilometers (9 mi), much farther and reliably than conventional copper lines.

Power surges, spikes and groupd loops are created by electrical equipment, by nearby lightning strikes, and from other sources. They are easily picked up by copper data lines and transmitted to connected devices, garbling data communications and damaging equipment.

However, fiber optic data transmission uses light in glass fiber cable as a communication medium. Being inherently non-electric, fiber optic cable will not pick up noise and provides the most reliable system possible – ideal for spanning areas with severe interference, such as near heavy electrical equipment, welding or radio transmissions. It does not transmit power spikes or surges and prevents ground loops by not providing a conductive path for the ground.
