Introduction

Wireless Connectivity Where You Need It

The Wzzard mesh intelligent wireless sensor platform creates a complete, quick and easy connectivity stack between your sensors and your application, on your network or on the Internet. The platform uses Wzzard mesh wireless sensor nodes and a wireless 802.15.4e SmartMesh IP network to transmit sensor data to the gateway. The SmartSwarm 342 gateway connects to the Internet via wired connections or cellular data networks.

Reliable, Highly Scalable Wireless Network

The Wzzard Mesh platform uses mesh networking and time-synchronized channel hopping to provide up to 99.999% connectivity, even in demanding RF environments. New nodes may be added at any time – the SmartMesh IP network will dynamically self-configure as nodes are added or removed. This is a function of the mesh network itself and does not need to be controlled by the network gateway. One gateway can support up to 100 nodes.

Easy Installation and Configuration

Non-intrusive - even portable - network “overlay” is easy to install and remove with no disruptions to your existing network and no downtime. Configuration of the Wzzard mesh sensor platform is easy via the Advantech hub cloud management portal.
