Zlinx Wireless I/O

Peer-to-Peer and Modbus I/O

- ✓ Modular, Customizable Wire Replacement
- √128 / 256 Bit AES Encryption
- √ Software Selectable RF Transmit Power
- √ Software Selectable Over-the-air Data Rate
- ✓ Modbus ASCII /RTU Compatible
- √ Wide Operating Temperature
- ✓ Active Repeater Functionality
- √ 10 to 40 VDC & 24 VAC Input Power

Zlinx™ Wireless Modbus I/O - flexible enough to fit your applications. These plug-n-play units from B&B Electronics combine traditional Modbus RTU remote analog and discrete I/O with built-in wireless connectivity. Wireless RTU serves as Modbus slave RTU in radio-based SCADA systems, or as a peer-to-peer communication platform.

Three Ranges Available - Short, Medium, Long range.

Active Repeaters - With built-in repeater functionality on -MR and 900 MHz -LR models, you can ensure vital signals get through.

Modular - Just snap on your I/O and you're ready to go. **Wide Temperature** - Meets most indoor or outdoor applications.

Rugged circuitry prevents signal degradation.

128 / 256 Bit AES Encryption - Secures your data.

Selectable RF Transmit Power – Allows you to optimize the transmitter power for your application.

Selectable Over-the-air Data Rate – Allows you to decrease the OTA Data Rate on –LR and –LR-AU versions, effectively increasing the radio transmitter's range.

Exception Reporting – In Modbus mode, allows the reporting of possible problems with connected devices.

Fail Safe – Allows you to set your I/O to a safe state in the event of a communications failure.

Calibration – Calculates correction factors to make I/O values better match your sensor.

Communications Failure Alarm – Allows the first DO to be configured as a COM failure alarm indicator.

Invert Output – You can invert the logic of all DO's in peer-topeer mode.

Monitor – You can use the Zlinx™ Manager Software to monitor your I/O

Wire Replacement (Peer-to-Peer Mode)

Replicate any analog or digital signal from a remote location-Wirelessly! Use a pair of Zlinx™ Wireless I/O modules to read sensor inputs or control actuators in hard-top-reach locations. Inputs and outputs of the paired Zlinx radios will mirror each other, making it easy to add wireless I/O to any application.

Modbus Peer-to-peer or Peer to Multi-peer

Seamlessly add wireless I/O to any Modbus application. Modbus is the most widely supported I/O protocol worldwide. With Zlinx Wireless I/O you can now bring wireless remote I/O into any Modbus system. Simply connect a Zlinx modem to and RS-232 or RS-485 port of the Modbus master and it can now poll up to 150 wireless I/O nodes – each node can be configured for 8 to 48 I/O points.
