About Semflex

For more than 40 years, Semflex has been manufacturing some of the highest quality coaxial cable in the world. Over the years, we have developed the expertise necessary to rapidly design and manufacture cable solutions to meet specific and unique requirements for a variety of environmental, mechanical and electrical conditions.

Semflex is a vertically integrated company manufacturing high performance RF/Microwave cables, cable assemblies and connectors for a global list of high technology firms, both large and small. The company's mission is to contribute to the success of its customers by:

- Offering cost-effective solutions and one-stop shopping via a broad line of RF and microwave products
- Reducing time to market by providing rapid turnaround time for new designs
- Increasing system reliability by providing high quality reliable products that exceed their specifications

Semflex currently supplies cable products to a variety of industries including:

- Land, Sea, and Airborne Military Weapons Platforms
- Electronic Counter Measures and Jammers
- Cellular Antennas and Base Stations
- Satellite Antennas and Earth Stations
- Commercial and Military Airframes
- Precision Test and Measurement
- Semiconductor Sputtering
- Missile Guidance Systems
- Communication Systems
- High Power Applications
- Phased Array Radars
- Professional Audio
- Industrial Lasers
- Medical MRI

HPI/LAI Series

HPI/LAI Series Features

- The most customer configurable cable assembly series
- Custom options such as phase matching and custom marking available upon request
- Available with high performance HP cable series and low attenuation LA cable series
- Wide selection of interfaces and cable jackets
- All connectors designed to meet MIL-C-39012 applicable industry standards
- All connectors designed for cable fit and optimum connector to cable transition
- Wide range of applications through 50GHz

Cable Constants	HP120S	HP160S	HP160U	HP190S	HP305S	HP450	LA190S	LA290S
Max. Freq., GHz	55	40	40	28	18	12	28	18

Semflex offers a large selection of microwave connectors designed to provide excellent electrical transitions between the connector interface and cable resulting in very low VSWR characteristics. Along with the popular connectors listed in the following tables, Semflex has hundreds of other connector designs to meet a variety of special requirements (i.e. high power, swept 90° bends, environmental sealing, low intermod characteristics, special plating or finishes, etc). For special requirements, please contact Customer Service at 507.833.8822 or at ccsorders@us.cinch.com.

Since no single cable is best suited for every type of application, Semflex offers a variety of 50 ohm cables carefully designed to meet specific performance/cost requirements. Different cable characteristics (i.e. flexibility, connector retention, torque and crush resistance, stability/repeatability with respect to temperature or flexure, cost, etc.) require special design considerations. Semflex's products lines take advantage of superior cable technology, carefully matching design and construction to specific application needs.

Jacket

Semflex utilizes a variety of jacket materials which are selected based on cost, flexibility, chemical and environmental considerations.

Polyurethane

- Low temperature rating
- UV resistant
- Abrasion resistant
- Flexible (-65 to 85°C)

FEP

- High temperature rating
- Chemical resistant
- Moisture resistant
- Low smoke
- Low outgassing (-65 to 200°C)

Shielding

Semflex provides several outer shield combinations comprised of silver or tin plated copper wire, bare copper or aluminum wire, and foil tapes ranging from 80 to 100% shielding coverage. Each cable is carefully designed to optimize braid design for cable function. Braid coverage is highly dependent on braid angle, number of picks, wire gauge size and number of strands - all of which affect the attenuation, flexibility, and shielding effectiveness of the cable. As a general rule, higher braid coverage yields better shielding and lower attenuation. Lower braid coverage yields better flexibility.

Round Braid

- Lower material cost
- Most flexible braid option

Woven Flat Braid

- Lower contact resistance between braid wires resulting in lower attenuation
- Better coverage provides increased shielding effectiveness
- Smoother conductor for lower VSWR
- Increased connector retention and torque resistance

Helical Flat Braid

- Improved flexibility and shielding
- Increased phase stability vs flexure
- Lower radial torque resistance

Wrapped or Folded Foil

- Polyimide (helical wrap) provides increased mechanical strength, high temp, chemical resistant
- Polyester (folded) low temp, low strength, lowers contact resistance and attenuation

Shielding

Triple Shield

- Woven flat braid, polyimide foil, round braid
- Provides >90 dB shielding effectiveness, high torque resistance, mechanically strong

Double Shield

- Helical flat braid, round braid
- Provides >100 dB shielding effectiveness, phase stable vs flexure

Double Shield

- Woven flat braid, round braid
- Provides >85 dB shielding effectiveness, low contact resistance

Double Shield

- Polyester foil, round braid
- Provides >85 dB shielding effectiveness, cost effective

Double Shield

- Round braid, round braid
- Provides >60 dB shielding effectiveness, flexible

Single Shield

- Round braid
- Provides >40 dB shielding effectiveness, very flexible

Dielectric

Semflex utilizes a variety of dielectric materials which are selected based on signal loss (dissipation factor), temperature extremes, power rating and velocity of propagation. Our manufacturing process carefully controls the concentricity between the outer conductor and the center conductor to maintain consistent characteristic impedance and low structural return loss.

Polyethelene

- Temp (-40 to 85°C)
- VP (66-85%)

Solid PTFE

- Temp (-65 to 125°C)
- VP (70%)

Low Density PTFE

- Temp (-65 to 200°C)
- VP (74-78%)

Ultra Low Density PTFE

- Temp (-65 to 200°C)
- VP (82-85%)

Characteristic Impedance Tolerances

- Extruded dielectrics: < +/- 6%
- Tape wrapped dielectrics: < +/- 2%

Center Conductor

Semflex offers a variety of center conductor materials with several different platings.

Solid Conductors

- Less resistance
- Lower loss
- Higher power

Stranded Conductors

- More flexible

Silver Plating

- Lowest loss
- Solderable

Copper Clad

- Cost effective
- Solderable

Military, Aerospace, Medical, Test & Measurement

The High Performance Product Line includes four series of cables suitable for applications with the most stringent mechanical, electrical or environmental requirements with up to 50GHz. Low loss, low VSWR, high power, high temperature, flexibility and phase stability are all examples of the many special requirements this product line is suited for. Due to the custom nature of these cables, Semflex also offers a large selection of connectors.

Cable Selection

HP Series

- Test & measurement interconnects - robust construction
- Best all around choice for microwave test and interconnect cables
- Low loss and VSWR to 55GHz, toughest mechanical construction

LA Series

- Extra low attenuation
- The best combination of low attenuation, phase stability and mechanical performance
- Two models available up to 28GHz operation

SW Series

- Lower cost - ease of assembly
- Good electrical performance, low loss to 129GHz
- Simplified connector attachments and assembly methods

KW Series

- Tight Installations - high power
- High power, low loss, high flexibility compared to air dielectric corrugated cables

HIGH PERFORMANCE CABLE

Power Handling

Average power ratings for coaxial cables are highly dependent on the long term operating temperature of the dielectric material. Semflex's published average power ratings are based on VSWR of 1.0:1, at sea level and an ambient temperature of 25° C. The base line power ratings can be adjusted to meet the actual conditions by using the derating factors for both temperature and altitude from the chart below.

Derating for Temperature and Altitude

Connector	Avg Power* (kW)	Peak Power (kW)
SMA	0.1	2.5
BNC	0.1	5.6

High Performance Comparison Data

The LA Series provides the best available combination of low attenuation, phase stability and mechanical performance. The signal loss at 18GHz for LA290S cable is <20 dB/100 ft with 0.290" overall diameter and for LA190S it is <37 dB/100 ft with 0.190" diameter. The carefully engineered construction provides excellent bend and crush resistance properties when compared to other ultra-low loss cables. This cable series is the best choice for phase stability over temperature* and flexure as outlined in electrical performance data.

Electrical Properties

	LA190S	LA290S

Inside Minimum Bend Radius (in)	1.1	1.600
Operating Temperature (°C)	-65/+200	-65/+200
Weight (lbs/ft)	0.034	0.090

Cable Construction

The LA Series uses silver plated inner and outer conductors for excellent attenuation performance. The ultra low density microporous PTFE dielectrics and FEP jackets are engineered to provide the optimum combination of mechanical characteristics and stable electrical performance over temperature extremes. Low loss, phase stability, and shielding effectiveness of >100 dB results from combining a helically served flat braid with a 97% coverage round braid.

NOTE: Our LA Series published temperature range defines the hot and cold temperature extremes the cable will perform at. This is based on the material properties that are used to construct the LA Series cable. However, there are no implied performance guarantees with respect to rapid temperature excursions between hot and cold extremes in a thermal shock situation. Semflex can not predict the rate of temperature change or the number of temperature excursions our product will experience in all possible customer applications; therefore we do not give a blanket statement of guaranteed product performance for something as strenuous as thermal shock.

LA SERIES CABLE

LA Series

*Phase stability is defined as the change in phase when the cable is bent 360 degrees around its minimum bend radius.

The HP Series has a long history in the military and aerospace industries as the interconnect cable of choice in ground, sea, and airborne systems. This series also excels in test and measurement applications offering high performance, flexibility, and availability of wide range of precision connectors for applications up to 50GHz. HP160U ULTRAFLEX has been especially designed for laboratory use with high flexibility in mind. The triple shield construction of HP Series in combination with Semflex connectors provide connector attachments that exceed 70 lbs of pull off force and can withstand harsh handling such as radial torque, continuous flexing, or wide temperature extremes.

Cable Construction

The HP Series uses silver plated copper inner and outer conductors for low attenuation. The microporous PTFE dielectric and FEP jackets provide consistent performance over temperature extremes with better phase performance over temperature compared to solid PTFE dielectrics. Shielding effectiveness >90 dB results from a triple shield construction of woven flat braid, foil, and round braid. This construction also provides substantially better radial torque resistance and connector pull off strength than helically wrapped shields.

The SW Series provides low loss cable solutions that bridge the gap between lower performance RG cables and expensive high performance cables. This series employs the same microporous PTFE dielectrics used in high performance, low loss cables, but offers a simple double braid construction. This construction gives the SW series exceptional electrical performance and allows for simplified connector attachments to reduce overall costs. The SW060, SW086 and SW150 cable sizes can be assembled with standard semirigid or RG style crimp on connectors.

Cable Construction

The SW Series uses silver plated inner and outer conductors for low attenuation. The microporous PTFE dielectrics and FEP jackets provide consistent performance over temperature extremes with better phase performance over temperature than solid PTFE dielectrics. The SW series construction is completed with two woven braids (97% coverage), offering shielding effectiveness >85 dB.

SW Series

For RF and MW applications requiring interconnects for:

- Racks, cabinets or enclosures
- Miniature flex cable diameters
- Broad temperature extremes
- Tight bends

The KW Series has the same ultra low attenuation of rigid, corrugated, air dielectric cables, while offering higher power ratings and incredible flexibility. A copper clad aluminum conductor and soft pliable polyurethane jacket provides the flexibility needed to easily route cable in tight spaces such as cabinets and airframes where rigid cables require special tooling or simply do not fit. These features combine to reduce overall system integration costs by allowing designers to save space and installers to save time.

Electrical Properties

Weight (lbs/ft)	0.15	0.20

Superior Flexibility

Compared to corrugated cables, the KW series offers much better flexibility. KW cables are easily hand formed and installed in spaces too tight for other high power or ultra low loss cables.

Cable Construction

KW Series cable uses copper clad aluminum center conductors for increased flexibility. The microporous (expanded) PTFE dielectrics provide increased power handling. Silver plated flat and round braids combined provide >85 dB of shielding effectiveness and robust connector attachment. The soft and pliable polyurethane jacket is fire retardant and UV resistant, suitable for both indoor and outdoor applications.

KW Series

For applications up to 14GHz requiring:

- Improved flexibility over corrugated
- Tight installation spaces
- Ultra low loss
- High power

The SM Series offers a flexible alternative to semi-rigid cable, employing the same connectors and assembly tooling used for 0.086 and 0.141 versions. This allows designers to bypass the cumbersome and costly step of fabricating three dimensional drawings, for significant cost savings and accelerated time to market. This solution is ideal for applications such as military ECM and guidance systems, commercial antennas, communications applications, and anywhere compact or densely-spaced coaxial interconnects are needed.

Electrical Properties

About Cinch Connectivity Solutions

For over 100 years, Cinch Connectivity Solutions has manufactured high-quality and reliable high-performance connectors and cable assemblies. Cinch is recognized as a world class connectivity supplier of RF, fiber optic, hybrid, microwave components, circular, d-subminiatures, modular rectangular, electronic enclosures and cable assemblies.

Cinch provides innovative solutions to the military, commercial aerospace, networking, telecommunication, test and measurement, oil and gas and other harsh environment industries.
