## PFC375 Series <br> AC-DC Power Supplies

The PFC375 products of the PerFormanCe Power Series incorporate high performance midrange power, active Power Factor Correction (PFC), and high reliability to meet varied commercial and industrial requirements.

Providing tightly-regulated DC power in a wide variety of single and multiple output configurations, the PFC375 is designed to provide full output power with only 300 Linear Feet per Minute (LFM) forced-air cooling (factory installed fan optional). Other features include remote sense, power fail, logic level inhibit, and DC power good. Main channel current sharing is provided for redundant applications. The PFC375 is available with SAE mountings or optional metric mountings.

The PFC375 product line is approved to the latest international regulatory standards and displays the CE Mark.

## Key Features \& Benefits

- RoHS Compliant
- Greater than 1 million hours demonstrated MTBF
- Power Factor Correction (PFC) meets EN61000-3-2
- Fully-regulated outputs
- Main output remote sense
- Current Share, Power Fail, and Power Good signals
- Overtemperature, overvoltage, and overcurrent protected
- Available with metric and SAE mountings
- Input transient \& ESD compliance to EN61000-4-2/-3/-4/-5
- Fan output voltage and optional fan

## NOTES:

1 Output currents ratings are expressed with 300 LFM forced air.
2 Maximum peak-to-peak noise expressed as a percentage of output voltage, 20 MHz bandwidth.
Models without suffix G use the lead solder exemption
Model numbers highlighted in yellow are not recommended for new designs or EOL.

## NOTES:

1 Output currents ratings are expressed with 300 LFM forced air.
2 Maximum peak-to-peak noise expressed as a percentage of output voltage, 20 MHz bandwidth.
3 Peak loads up to 450 Watts for 60 seconds or less are acceptable, (10\% duty cycle max.). Peak power must not exceed 450 Watts.
$4 \quad \mathrm{~V} 4$ can be adjusted to 16 V with a minimum load of 5 A on V 1 .
5 For operation of V4 greater than 24 V , consult factory.
$6 \quad \mathrm{~V} 3$ and V 4 may be series connected to obtain 48 V .
7 Models without suffix $G$ use the lead solder exemption
Model numbers highlighted in yellow are not recommended for new designs or EOL
