GBIC Installation Guide

Part Number	Link Indicator on Rx_LOS Pin	Auto-Negotiation enabled by default	Interface	Duplex Mode
SFP-1GBT-06	Yes	Yes	GBIC 10/100/1000Base-T	Full

- Rx_LOS is always ENABLE.
High → Not linked or linked at 10Base-T.
Low → Linked to link-partner.
- Customer's MAC should be setup for **SGMII interface with Auto-Negotiation** and the preferred mode of operation. In most cases there is no need to access the PHY registers of the Broadcom PHY within the SFP-1GBT-06 Transceiver.
- The transceiver will automatically detect the advertised speed and mode of operation via the host of the link-partner.

GBIC to SGMII-Copper:

- If the SGMII Interface is required, Bel would recommend the SFP-1GBT-05 Transceiver for installation.
- However, SFP-1GBT-06 Transceiver can also be configured to operate in SGMII (10/100/1000Base-T) interface by accessing the Broadcom PHY registers via "0xAC":
 1. Write register 18h, shadow 07h bit [7] = 0 (Disable RGMII Mode)
 2. Write register 1Ch, shadow 1Fh bit [0] = 1 (Enable Fiber register bank)
 3. Write register 00h, bit [11] = 1 (Power-down SerDes interface)
 4. Write register 1Ch, shadow 1Fh bit [2:1] = 10 (Configure the BCM54616S in SGMII to Copper mode)
 5. Write register 00h, bit [11] = 0 (Power-up SerDes interface)
 6. Write register 1Ch, shadow 1Fh bit [0] = 0 (Enable Copper register bank)
 7. Write register 00h, bit [11] = 0 (Power-up Copper interface)

MAC Auto-Negotiation vs. MAC without Auto-Negotiation:

In case MAC does not have Auto-Negotiation capability, the Auto-Negotiation of the SFP-1GBT-06 can also be disabled by clearing the Broadcom PHY register 00h, bit12 to "0", before connecting the Bel transceiver to the link partner.
