FOR EVERY SCREW THE RIGHT BLADE

Demands on bolted connections are increasing, and this also applies increasingly to connections with low pretensioning forces, because bolts always tend to be tightened too tightly. This can lead to major damage. That is why it makes sense to tighten screws with a firmly defined torque.

For quality assurance in production assembly and in the repair of electronic components, tools must be used where the tightening torques can be limited. That is why we have developed a torque screwdriver and a series of **preset torque adapters** for easy handling in the electronics sector.

With the right tool and the correct torque specifications, you will produce a screw connection that will serve its purpose permanently and save you a costly thread repair.

In addition to conventional screwdriving tools, we also offer **ESD screwdriver solutions** for all common screw heads. Especially for electrotechnical applications, such as working on protected devices, sensitive circuits and connections.

All **ESD screwdrivers are EPA suitable** and are used as a safe method of dissipating electrostatic charge when working in protected areas (ESD workplace/ESD protection zone).

PRESET TORQUE-ADAPTER ONE SYSTEM MANY POSSIBILITIES

TORQUEline from BERNSTEIN impressed with its flexibility. We developed a tool system that allows to combine the single components in various ways. Thus, you always have the right torque for every application.

Adapters turn any bit holder into a professional torque screwdriver

TORQUE ADAPTER

Turn your bits and a holder into your perfect torque tool. Can be conveniently combined with a preset torque for tightening or loosening. These precise fine tools are available from 0.1 to 5.5 Nm. Often as a complete solution for working on electronic devices, in quick-change systems, robot stations, aerospace, medical technology or simply on every workbench, wherever the exact torque is required.

The click sound indicates when torque is reached, so the adapter cannot be overtorqued. No torque is released when loosening screws (due to the locked core shaft), so no additional loosening tool is required.

TORQUE SCREWDRIVER

The torque-screwdriver was developed to carry out the screwdriving process precisely and reproducibly with the right tightening torque. With the screwdriver you can choose and adjust the torque (0.05 to 0.6 Nm).

It has a hexagon 1/4 inch bit holder with a clamping ball. The torque can be adjusted and locked via a knurled screw to the desired size.

torque screwdriver
0.05 - 0.6 Nm with adapter

Aluminum handle with knurling, socket hex 1/4 inch (6,35 mm)
Tolerance: ± 6 %, total length 100 mm, weight 111 g

The torque from 0.05 to 0.6 Nm can be set to the required size using a knurled screw, the set value can then be locked. When the set torque is reached there should be an audible click and a click should be felt. If this is not the case, please readjust the small screw so that the screwdriver clicks audibly. When not in use, return the torque-screwdriver back in starting position (0 Nm). This relieves the preload and prevents premature wear.

The torque screwdriver is a precision instrument. To ensure warranty, calibration must be performed regularly and is the responsibility of the owner. The recommended calibration interval is every 12 months and may be shorter depending on the application. The product is lubricated by the manufacturer for lifelong use and should not be additionally oiled. Ideally, always put it back in the box after using to keep dirt and moisture away. Never disassemble the torque screwdriver yourself. If you need to repair the torque screwdriver, please contact a qualified service station. An improper repair attempt can lead to damage to this instrument and then it no longer meets the requirements of DIN ISO 6789 and ASME 8107.300-2010.

PRESET TORQUE ADAPTER

4-976	0.6	6.1	5.3	4 mm
4-977	0.7	7.1	6.2	4 mm

The clicking sound indicates when the torque has been reached so that the adapter cannot be over-tightened. When loosening screws there is no turning moment unlocking takes place, so no additional release tool is required.

Adapters are primarily suitable for manual operation. In connection with a power tool, we recommend a maximum speed of 100 rpm, with a minimum click Repetition. Higher speed possible as a custom-made product, please contact us!

ESD ELECTRONICS SCREWDRIVER TOOL

For all work on electrostatically sensitive components. The blades are made of quality steel to ensure torsion resistance - at maximum stress. The tips are burnished for dimensional stability and to prevent chrome chipping (except sockets). The rotating cap is smooth-running and allows the screwdriver to be held in position despite starting pressure. Thanks to the ergonomically shaped handle, the screwdriver fits perfectly in the hand. 100% Made in Germany.

TOOL HOLDER

STOREY

For more organisation at your workstation

The STOREY tool holder was developed as practical storage for hand tools so that your tools are always within reach. Whether as a table stand or wall holder.

Holder made of 1.5 mm sheet steel
ESD powder coated RAL9005
dissipative 10^5 - 10^9 Ohm
100% Made in Germany

ESD ELECTRONIC SCREWDRIVERS

The ergonomic handle of the screwdriver is made of ESD plastic (PP black) and has a surface resistance of 10^5 to 10^7 Ohm. The matt chrome-plated blade is made of high-quality chrome-molybdenum steel (hardness greater than 55 HRC) according to DIN ISO and is hardened over its entire length. 100% Made in Germany.

ESD INTERCHANGEABLE SCREWDRIVER SETS

ESD interchangeable screwdrivers, single or in a set, in a practical roll-up case made of dissipative material (10^6 - 10^9 Ohm), equipped with double-sided screwdriver blades and an interchangeable ESD plastic handle. The holder is a brass clamping sleeve, suitable for all hexagon interchangeable blades with 4 mm wrench width. The blades are made of high-quality chrome vanadium steel, hardened over their entire length (HRC 56-58), matt chrome-plated, tip black burnished.

ESD SCREWDRIVERS

The ergonomic handle of the screwdriver is made of ESD plastic (PP black) and has a surface resistance of 10^5 to 10^7 Ohm. The matt chrome-plated blade is made of high-quality chrome-molybdenum steel (hardness over 55 HRC) according to DIN ISO and is hardened over its entire length.

For all work on electrostatically sensitive components. The blades are specially hardened to ensure torsion resistance even under maximum stress. The tips are burnished for dimensional stability and to prevent chrome chipping. Thanks to the ergonomically shaped handle, the screwdriver fits perfectly in the hand.

SCREWDRIVERS POWERLINE

For the professional user as well as for the hobby craftsman a durable hand tool. The chrome-plated blade is made of a high quality chrome vanadium steel and hardened over its entire length. The tip is burnished for perfect dimensional stability and to avoid chrome chips. The ergonomically shaped multi-component handle is slip-proof, impact-resistant and has a practical hanging hole for your workbench. 100% Made in Germany.

The quality is particularly evident in the manufacturing process of the blade. During quality testing, the blade is clamped in a torque test rig and twisted until it breaks smoothly. According to DIN, this has to be done in a very specific Newton metre range. Only a smooth fracture is safe! Low quality products can splinter or tear, which can be extremely dangerous.

MICRO SCREWDRIVER

Fine screwdrivers are also called micro screwdrivers and are used in precision mechanics for small screw sizes or miniature screws. The hard precision blade made of quality tool steel enables direct gripping of the miniature screw and provides optimum force closure. The sturdy plastic handle with rotation cap fits comfortably in the hand, the coloured ring facilitates work by quickly recognising the required size.

Blade (HRC 58-61) material molybdenum-vanadium steel, burnished black, handle plastic. 100% Made in Germany.

Instructions: High humidity or touching burnished blades with your fingers (sweat) causes flash rust. Therefore, the blades should always be kept dry or rubbed with a drop of oil for storage. If such rust forms on the blade, it can be easily removed, with a slight ground.

Blades are burnished to prevent the chrome from flaking off and to achieve absolute top dimensional stability.

TERMS OF SALE AND DELIVERY

GENERAL

The nature and scope of delivery are specified in the order confirmation. The following delivery terms shall apply to all deliveries to be carried out by us. Purchasing conditions of the customer do not oblige us, even if we do not expressly contradict this. Verbal or by intercom agreements made require our written confirmation. Obvious mistakes in offers, order confirmations, etc. are expressly reserved and can be considered at any time. We are entitled to process any data relating to the business relationship or in connection with the same concerning buyers, whether the buyer itself or third parties, within the framework of the Federal Data Protection Act.

OFFER

Our offers are permissive, an order is deemed to be granted if confirmed by us in writing. PRICES, DELIVERY BASIS AND PACKAGING Unless otherwise agreed, the prices in Euros, ex works, are exclusive packaging. In the case of special packaging regulations of the customer, the additional costs involved are invoiced. Packaging is not accepted.

DELIVERY

The delivery takes place at the expense and risk of the buyer without regard to who bears the freight costs. We reserve the right to place orders in partial deliveries. For custom-made products, excess or short deliveries of up to 10% are permitted.

DELIVERY TIME

The delivery time begins upon receipt of all information required for the execution of the order. We endeavor to comply with the delivery time specified in the order confirmation. No claims of any kind can be asserted from a delayed delivery.

COMPLAINTS

Complaints can only be accepted within 8 days after receiving of the goods.

The shape and colour of the tool may differ from the item shown in the catalogue.

GUARANTEE

For all BERNSTEIN tools, which are unusable due to proven material or manufacturing defects, we deliver within one year after deliver a replacement. This free replacement service is excluded if the tools have become unusable due to natural wear or improper handling.

DISCLAIMER

We do not assume any guarantee for the suitability of our products for the intended purpose of the customer. For damages caused by unsuitable or improper use, commissioning by the customer or third parties, and for the natural wear and tear we assume no guarantee. Any claims for damages, irrespective of the legal basis, as well as, in particular, the liability by tort (product liability) are excluded to the extent permitted by law.

PAYMENT

Our invoices are payable within 10 days of the invoice date with 2% discount or in 30 days net, unless otherwise agreed in the order confirmation.

RESERVATION OF TITLE

We reserve the title to all goods delivered by us until the buyer has paid all claims arising from the business relationship. The buyer is entitled to resell the reserved goods in ordinary business transactions. In the case of resale, the buyer has to reserve the ownership of the sold goods on the same terms as his customer. The purchaser hereby assigns to us the purchase price claim against the buyer from the resale.

FULFILLMENT AND JURISDICTION

Place of performance and jurisdiction for delivery and payment is Remscheid. In any case, only German law shall apply, with the exclusion of any foreign law.

ONLINE DISPUTE RESOLUTION

The European Commission provides a platform for online dispute resolutions (ODR) which can be accessed at

<https://ec.europa.eu/consumers/odr/>.

In order to settle dispute arising from a contractual relationship with a consumer or from whether such a contractual relationship exists at all, we will participate in dispute settlement proceedings before a consumer dispute resolution body. Consumers can contact their national European Consumer Centre in this regard. The respective contact details of the individual ECCs can be found at

<https://www.evz.de/en/alternative-dispute-resolution/adr-in-europe/>.

A little story about
the word amber (BERNSTEIN)

The greek word for amber is „elektron“: the root of today's term electronics. Even the greeks discovered the special feature of amber: by rubbing the natural amber can be electrostatically charged. The charged stone can attract dust particles.

Today you can use this property to check the authenticity of an amber. If it is real, it can be tested through charge rubbing on a cotton cloth.

You can also wear it as jewellery:
it should protect from evil magic and give joy of life.

Just like our high-quality BERNSTEIN
ESD Tools - them protect against
electrostatics and give joy with
the daily work.
