B&K PRECISION

Portable Multi-Channel Data Recorder
DAS240-BAT Series

The DAS240-BAT series measures and records parameters commonly found in process applications including voltage, temperature, current, resistance, frequency and pulse. It includes 20 universal analog channels with convenient screw input terminals that can be expanded up to 200 channels. This recorder was developed by B&K Precision's subsidiary Sefram in France, which specializes in the design and manufacture of data acquisition instruments, field strength meters and other test and measurement instruments.

Measurement results can be viewed graphically and numerically on a 10-inch color touchscreen and saved to internal memory or an external USB memory stick. Icon-driven menus make the instrument easy to navigate. The free DasLab Windows PC software allows users to remotely control and configure the recorder, transfer logging results and configuration files, and view live data in graphical or numerical format on the PC.

The data recorder features 32 GB of solid-state memory for data logging over extended periods. The internal battery provides back-up in the event of power loss (-BAT).

Main applications

- Temperature logging with thermocouples and platinum resistance temperature sensors
- Voltage measurements down to ± 0.5 mV range

Expandable up to 200 analog channels

The DAS240-BAT series provides a flexible and scalable analog channel concept. Each unit is supplied with one 20-channel analog module and 20 screw input terminal blocks. By daisy-chaining additional modules, the total number of channels can be incremented by 20 to a maximum of 200 channels (10 modules). These modules can be pre-wired to the UUT and stationary in multiple locations while the instrument is moved to each location for recording. This helps with wire management and setup time.

The 50 Ω shunt can be used on any channel of the recorder to accurately measure, display, and record the output from 4 to 20 mA current loop sensors.

Virtual Network Computing (VNC) capability

The recorder's built-in VNC capability, based on the Remote Frame Buffer protocol (RFB), provides a graphical desktop sharing system to remotely control the instrument from another computer. VNC is platform independent and provides a means to control all functions of the instrument through a graphical interface replicating the instrument's front panel, using a mouse and keyboard.

DasLab Software

DasLab file management

DasLab is a license-free Windows compatible software that can be downloaded from www.bkprecision.com. The software controls the recorder through the LAN or WiFi interface and provides the following features:

- Channel and trigger configuration
- Display live measurement results in graphical or numerical format
- File management, file upload and download of data recordings, screen captures and configuration files
