## GENERAL DESCRIPTION

The BCT4228 is a high bandwidth, fast double-pole double-throw (DPDT) analog switch. Its wide bandwidth and low bit-to-bit skew allow it to pass high-speed differential signals with good signal integrity. Each switch is bidirectional and offers little or no attenuation of the high-speed signals at the outputs. Industry-leading advantages include a propagation delay of less than 250ps, resulting from its low channel resistance and low I/O capacitance. Its high channel-to-channel crosstalk rejection results in minimal noise interference.

## APPLICATIONS

Cell Phones
PDAs
Portable Instrumentation
Differential Signal Data Routings
USB 2.0 Signal Routing
