The Rx Data_out signal is inverted which means that light_on will lead to Data_out low.
POR remains active during $\mathrm{V}_{\mathrm{CC}}$ power up, typically until $100 \mu \mathrm{~s}$ after 2.8 V is reached. POR follows $\mathrm{V}_{\mathrm{CC}}$ while active.

## Recommended chemicals for Cleaning/Degreasing

Alcohols: methyl, isopropyl, isobutyl.
Aliphatics: hexane, heptanes
Other: soap solution, naphtha
Do not use partially halogenated hydrocarbons such as 1.1.1 trichloroethane, ketones such as MEK, acetone, chloroform, ethyl acetate, methylene dichloride, phenol, methylene chloride, or N-methylpyrolldone. Also, Avago does not recommend the use of cleaners that use halogenated hydrocarbons because of their potential environmental harm.
