BROADCOM®

HDSM-441x, HDSM-443x

0.39-in. (10.0-mm) Dual-Digit Surface-Mount LED Display

Description

The Broadcom® HDSM-441x/443x is a dual digit display of 0.39-in. (10.0-mm) height. This device uses AlInGaP /GaAs chips and has a grey top surface with white segments.

Features

- 0.39-in. digit height
- Low current operation
- Excellent characters appearance
- Available in CA and CC
- 500 pieces per reel
- Moisture sensitivity level: Level 3
- RoHS compliant

Ordering Information

Red	Green	Yellow	Orange	Description
HDSM-441C	HDSM-441H	HDSM-441F	HDSM-441L	Common Anode, Right Hand Decimal
HDSM-443C	HDSM-443H	HDSM-443F	HDSM-443L	Common Cathode, Right Hand Decimal

Package Dimensions
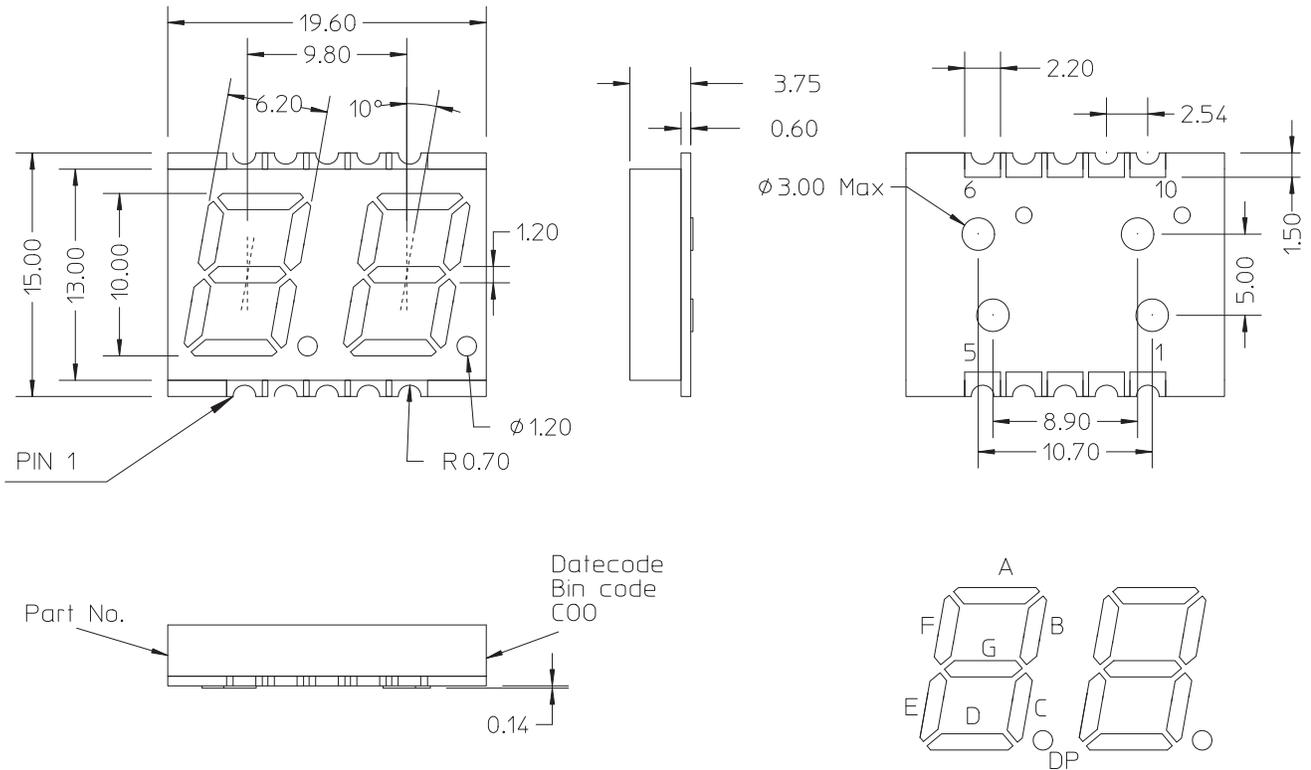

NOTE:

1. All dimensions are in millimeters.
2. Tolerance is ± 0.25 mm unless otherwise specified.

Pin Connection (Common Anode)

Pin Number	Connection
1	CATHODE G
2	CATHODE DP
3	CATHODE A
4	CATHODE F
5	COMMON ANODE DIG2
6	CATHODE D
7	CATHODE E
8	CATHODE C
9	CATHODE B
10	COMMON ANODE DIG1

Pin Connection (Common Cathode)

Pin Number	Connection
1	ANODE G
2	ANODE DP
3	ANODE A
4	ANODE F
5	COMMON CATHODE DIG2
6	ANODE D
7	ANODE E
8	ANODE C
9	ANODE B
10	COMMON CATHODE DIG 1

SMT Soldering Profile

Pb-Free Reflow Soldering Profile
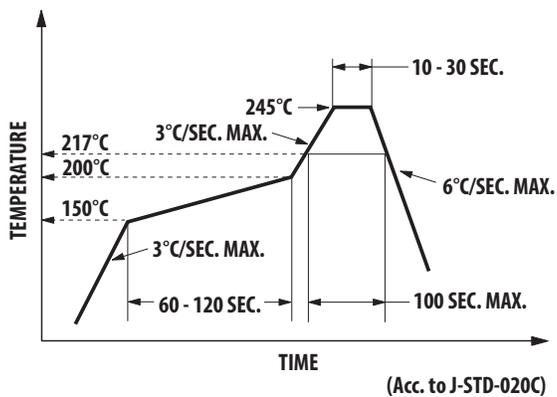

NOTE:

1. The peak temperature refers to the peak package body temperature.

2. The number of reflow processes is limited to a maximum of 2 times only. A cooling process to normal temperature is required between the first and second soldering processes.
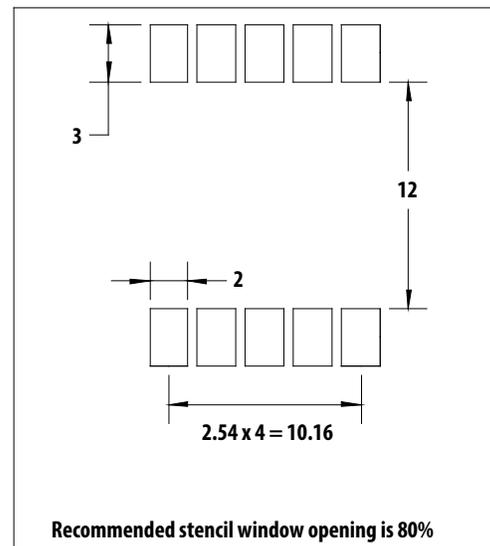

Recommended Soldering Pattern (unit: mm)

Tape Specification (unit: mm)

USER DIRECTION OF UNREELING

Precautionary Notes

Soldering

- Do not perform reflow soldering more than twice. Allow the product to cool to normal room temperature before the second reflow. Observe the necessary precautions of handling moisture-sensitive devices as stated in the following section.
- Do not apply any pressure or force on the LED display during reflow and after reflow when it is still hot.
- Use reflow soldering to solder the LED display. Use hand soldering only for rework if unavoidable, but it must be strictly controlled to the following conditions:
  - Soldering iron tip temperature = 315°C maximum
  - Soldering duration = 2 seconds maximum
  - Number of cycles = 1 only
  - Power of soldering iron = 50W maximum
- Do not touch the LED display with the soldering iron except for the soldering terminals, as it may cause damage.
- Confirm beforehand whether the functionality and performance of the LED display is affected by soldering with hand soldering.
- Use solder paste with no-clean flux for soldering.
- To remove foreign particles on the surface of the package, use a wet cotton bud with isopropyl alcohol (IPA). During cleaning, rub the surface gently without putting too much pressure. Do not wash or soak the LED display in any solution.

Handling of Moisture-Sensitive Devices

This product has a Moisture Sensitive Level 3 rating per JEDEC J-STD-020. Refer to Broadcom Application Note AN5305, *Handling of Moisture Sensitive Surface Mount Devices*, for additional details and a review of proper handling procedures.

- Before use:
  - An unopened moisture barrier bag (MBB) can be stored at <40°C/90% RH for 12 months. If the actual shelf life has exceeded 12 months and the humidity indicator card (HIC) indicates that baking is not required, it is safe to reflow the LED displays per the original MSL rating.
  - Do not open the MBB prior to assembly (for example, for IQC). If unavoidable, the MBB must be properly resealed with fresh desiccant and an HIC. The exposed duration must be taken in as floor life.

- Control after opening the MBB:
  - Read the HIC immediately upon opening the MBB.
  - Keep the LEDs at <30°C/60% RH at all times, and complete all high-temperature related processes, including soldering, curing, or rework within 168 hours.
- Control for unfinished reel:

  Store unused LEDs in a sealed MBB with desiccant or a desiccator at <5% RH.
- Control of assembled boards:

  If the PCB soldered with the LED displays is to be subjected to other high-temperature processes, store the PCB in a sealed MBB with desiccant or desiccator at <5% RH to ensure that all LED displays have not exceeded their floor life of 168 hours.
- Baking is required if one of the following conditions exist:
  - The HIC indicator indicates a change in color for 10% and 5%, as stated on the HIC.
  - The LED displays are exposed to conditions of >30°C/60% RH at any time.
  - The LED's floor life exceeded 168 hours.

  The recommended baking condition is: 60°C ± 5ºC for 20 hours.

  Baking can only be done once.

Application Precautions

- The drive current of the LED display must not exceed the maximum allowable limit across temperature as stated in the data sheet. Constant current driving is recommended to ensure consistent performance.
- Circuit design must cater to the whole range of forward voltage (V_F) of the LED display to ensure the intended drive current can always be achieved.
- The LED display exhibits slightly different characteristics at different drive currents, which may result in a larger variation of performance (such as intensity, wavelength, and forward voltage). Set the application current as close as possible to the test current to minimize these variations.
- The LED is not intended for reverse bias. Use other appropriate components for such purposes. When driving the LED in matrix form, ensure that the reverse bias voltage does not exceed the allowable limit of the LED.

- Avoid rapid changes in ambient temperature, especially in high-humidity environments, because they cause condensation on the LED display.
- If the LED display is intended to be used in harsh or outdoor environment, protect the LED against damages caused by rain, water, dust, oil, corrosive gases, external mechanical stresses, and so on.
