# HFBR-1505AZ/2505AZ (SMA Tx/Rx for SERCOS) HFBR-1515BZ/2515BZ (ST ${ }^{\oplus}$ Tx/Rx for PROFIBUS) HFBR-1505CZ/2505CZ (SMA Tx/Rx for INTERBUS-S) 

Fiber Optic Transmitters and Receivers for SERCOS, PROFIBUS and INTERBUS-S Applications

## Data Sheet

## Description

## SERCOS

SERCOS, an acronym for SErial Realtime COmmunications System, is a standard digital interface for communication in industrial CNC applications. SERCOS is a European (EN 61491) and international standard (IEC 61491). The optical interface allows data rates of $2,4,8$, and 16 MBd and data transfer between numerical controls and drives via fiberoptic rings, with voltage isolation and noise immunity. The HFBR-1505AZ and HFBR-2505AZ products comply with SERCOS specifications for optical characteristics and connector style, and have guaranteed performance up to 10 MBd . (Typically the 16 MBd required by SERCOS is possible as well but please contact Avago regarding the plan for the 16 MBd device.)

## PROFIBUS

PROFIBUS, an acronym of PROcess Fleld BUS, is an open fieldbus standard defined for data rates ranging from 9.6 kBd to 12 MBd in selectable steps for wire and optical fiber. PROFIBUS is a German national DIN 19245 standard and a European CENELEC standard EN 50170. The $\mathrm{ST}^{\oplus}$ connector is the recommended optical port of the PROFIBUS optical fiber version but other connectors are allowed as well. The HFBR-1515BZ and HFBR-2515BZ comply fully to the technical guideline using Plastic Optical Fiber up to 6 MBd , and have a guaranteed performance at data rates up to 10 MBd . (Typically the 12 MBd is possible as well, but please contact Avago regarding the plan for the 12 MBd device.)

## INTERBUS-S

INTERBUS-S, a special open Sensor/Actuator Bus, is finding a broad acceptance in the factory automation industry. The HFBR-1505CZ and HFBR-2505CZ were specially designed for this application and can be used with 1 mm POF and $200 \mu \mathrm{mCS}$ fiber at the specified data rates of 500 kBd and 2 MBd . The optical transmission guideline is a supplement of the German National DIN E 19258 standard draft. On the European level, prEN 50254 is the draft of the INTERBUS-S fieldbus.

## Features

- Meets industrial SERCOS, PROFIBUS, and INTERBUS-S standard
- SMA and ST ${ }^{\text {p }}$ ports
- 650 nm wavelength technology
- Specified for use with 1 mm plastic optical fiber and $200 \mu \mathrm{~m}$ hard clad silica
- Auto-insertable and wave solderable
- DC - 10 MBd data rate
- RoHS-compliant

## Applications

- Industrial control data links
- Factory automation data links
- Voltage isolation applications
- PLCs
- Motor drives
- Sensor, meter and actuator interfaces
$\mathrm{ST}^{\circ}$ is a registered trademark of AT\&T.
HCS ${ }^{\circ}$ is a registered trademark of OFS Corporation.

## Package Information

All HFBR-X5X5XZ series transmitters and receivers are housed in a low-cost, dual-in-line package that is made of high strength, heat resistant, chemically resistant and UL 94 V-O (UL file \# E121562) flame retardant plastic. The transmitters are easily identified by the light grey colored connector port. The receivers are easily identified by the dark grey colored connector port. The package is designed for auto-insertion and wave soldering so it is ideal for high volume production applications.

## Handling and Design Information

When soldering, it is advisable to leave the protective cap on the unit to keep the optics clean. Good system performance requires clean port optics and cable ferrules to avoid obstructing the optical path. Clean compressed air often is sufficient to remove particles of dirt; methanol on a cotton swab also works well.

## Recommended Chemicals for Cleaning/Degreasing X5X5X Products

Alcohols: methyl, isopropyl, isobutyl.
Aliphatics: hexane, heptane.
Other: soap solution, naphtha.
Do not use partially halogenated hydrocarbons such as 1,1,1 trichloroethane, ketones such as MEK, acetone, chloroform, ethyl acetate, methylene dichloride, phenol, methylene chloride or N-methylpyrolldone. Also, Avago does not recommend the use of cleaners that use halogenated hydrocarbons because of their potential environmental harm.

CAUTION: The small junction size inherent in the design of these components increases the components' susceptibility to damage from electrostatic discharge (ESD). It is advised that normal static precautions be taken in handling and assembly of these components to prevent damage and/or degradation which may be induced by ESD.

## Specified Link Performance

$-0^{\circ} \mathrm{C}$ to $+70^{\circ} \mathrm{C}$ unless otherwise noted.

| Parameter | Symbol | Min. | Max. | Unit | Condition | Reference |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Link Distance with | 1 | 0.1 | 40 | m | POF | Notes 1, 2, 3, 4, 6 |
| HFBR-1505AZ/2505AZ or |  | 0.1 | 200 | m | HCS $^{\circ}$ | Notes 1, 2, 3, 5, 6 |
| HFBR-1515BZ/2515BZ |  |  |  |  |  |  |

## Notes:

1. With recommended $T x$ and $R x$ circuits ( 60 mA nominal drive current).
2. POF HFBR-ExxyyyZ $0.23 \mathrm{~dB} / \mathrm{m}$ worst case attentuation.
3. $\mathrm{HCS}^{\oplus} 10 \mathrm{~dB} / \mathrm{km}$ worst case attenuation.
4. Including a 3 dB optical safety margin accounting for link service lifetime.
5. Including a 2 dB optical safety margin accounting for link service lifetime.
6. Signaling rate DC to 10 MBd .
7. Signaling rate DC to 2 MBd .

## HFBR-15X5XZ Transmitters

The HFBR-15X5XZ transmitter incorporates a 650 nm LED in a light gray nonconductive plastic housing. The high light output power enables the use of both plastic optical fiber (POF) and Hard Clad Silica (HCS ${ }^{\circ}$ ). This transmitter can be operated up to 10 MBd using a simple driver circuit. The HFBR-1505XZ is compatible with SMA connectors, while the HFBR-1515XZ mates with $\mathrm{ST}^{\ominus}$ connectors.

## Absolute Maximum Ratings

| Parameter | Symbol | Min. | Max. | Unit | Reference |
| :--- | :--- | :--- | :--- | :--- | :--- |

## Notes:

1. Typical data at $25^{\circ} \mathrm{C}$.
2. Optical power measured at the end of 0.5 meters of 1 mm diameter plastic optical fiber with a large area detector.
3. Minimum and maximum values for $\mathrm{P}_{\mathrm{T}}$ over temperature are based on a fixed drive current. The recommended drive circuit has temperature compensation which reduces the variation in $P_{\top}$ over temperature, refer to Figures 4 and 6 .
4. Thermal resistance is measured with the transmitter coupled to a connector assembly and fiber, and mounted on a printed circuit board.
5. To further reduce the thermal resistance, the cathode trace should be made as large as is consistent with good RF circuit design.
6. For $\mathrm{I}_{\mathrm{F}, \mathrm{PK}}>60 \mathrm{~mA}$, the duty factor must maintain $\mathrm{I}_{\mathrm{F}, \mathrm{AVG}} \leq 60 \mathrm{~mA}$ and pulse width $\leq 1 \mu \mathrm{~s}$.
7. 1.6 mm below seating plane.
8. Minimum peak output power at $25^{\circ} \mathrm{C}$ is -5.3 dBm (POF) and $-16.0 \mathrm{dBm}\left(\mathrm{HCS}^{\circ}\right)$ for 1505 C series only.
9. Optical power measured at the end of 1 meter of 1 mm diameter plastic or $200 \mu \mathrm{~m}$ hard clad silica optical fiber with a large area detector.
10. Pins 1 and 4 are for mounting and retaining purposes, but are electrically connected; pins 5 and 6 are electrically isolated. It is recommended that pins $1,4,5$, and 6 all be connected to ground to reduce coupling of electrical noise.
11. Output power with $200 \mu \mathrm{~m}$ hard clad silica optical fiber assumes a typical -10.5 dB difference compared to 1 mm plastic optical fiber.
12. Moisture sensitivity level (MSL) is 3 .

## HFBR-25x5AZ/BZ Receivers

The HFBR-25x5AZ/BZ receiver consists of a silicon PIN photodiode and digitizing IC to produce a logic compatible output. The IC includes a unique circuit to correct the pulse width distortion of the first bit after a long idle period. This enables operation from DC to 10 MBd with low PWD for arbitrary data patterns. The receiver output is a "push-pull" stage compatible with TTL and CMOS logic. The receiver housing is a dark grey, conductive plastic. The HFBR-2505AZ is compatible with SMA connectors, while the HFBR-2515BZ mates with $\mathrm{ST}^{\oplus}$ connectors.

## HFBR-2505CZ Receiver

The HFBR-2505CZ receiver includes a monolithic DC coupled, digital IC receiver with open collector Schottky output transistor. An internal pullup resistor to $\mathrm{V}_{\mathrm{CC}}$ is available at pin 5 . The receiver housing is a dark gray conductive plastic and the optical port is compatible with SMA connectors. The speci-fied signal rate of HFBR2505 CZ is 2 MBd .

## Notes:

1. 1.6 mm below seating plane.
2. It is essential that a bypass capacitor $0.1 \mu \mathrm{~F}$ be connected from pin 6 to pin 7 of the receiver. Total lead length between both ends of the capacitor and the pins should not exceed 20 mm .
3. Pins 1 and 4 are electrically connected to the conductive housing and are also used for mounting and retaining purposes. It is required that pin 1 and 4 be connected to ground to maintain conductive housing shield effectiveness.
4. Moisture sensitivity level (MSL) is 3 .
