## Data Sheet

## Description

This family of $\mathrm{T}-1^{3 / 4}$ tinted, diffused LED lamps is widely used in general purpose indicator applications. Diffusants, tints, and optical design are balanced to yield superior light output and wide viewing angles. Several intensity choices are available in each color for increased design flexibility.

## Features

- High intensity
- Choice of 4 bright colors
- High Efficiency Red
- Orange
- Yellow
- High Performance Green
- Popular T-13/4 diameter package
- Selected minimum intensities
- Wide viewing angle
- General purpose leads
- Reliable and rugged
- Available on tape and reel

## Part Numbering System

## Package Dimensions

Notes:

1. All dimensions are in mm (inches).
2. An epoxy meniscus may extend about $1 \mathrm{~mm}(0.040$ ") down the leads.
3. For PCB hole recommendations, see the Precautions section.

## Notes:

1. $\theta^{1 / 2}$ is the off-axis angle at which the luminous intensity is half the axial luminous intensity.
2. The dominant wavelength, $\lambda_{d}$, is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.
3. Radiant intensity, $I_{e}$, in Watts/steradian, may be found from the equation $I_{e}=I_{V} / \eta_{v}$, where $I_{V}$ is the luminous intensity in candelas and $\eta_{v}$ is the luminous efficacy in lumens/Watt.

## Notes:

1. See Figure 5 (Red/Orange), 10 (Yellow), or 15 (Green) to establish pulsed operating conditions.
2. For Red, Orange and Green series derate linearly from $50^{\circ} \mathrm{C}$ at $0.5 \mathrm{~mA} /{ }^{\circ} \mathrm{C}$. For Yellow series derate linearly from $50^{\circ} \mathrm{C}$ at $0.2 \mathrm{~mA} /{ }^{\circ} \mathrm{C}$.
3. $1.8 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$. For Yellow series derate power linearly from $50^{\circ} \mathrm{C}$ at $1.6 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$.
4. The transient peak current is the maximum non-recurring peak current that can be applied to the device without damaging the LED die and wirebond. It is not recommended that the device be operated at peak currents beyond the peak forward current listed in the Absolute Maximum Ratings.

## Precautions

## Lead Forming

- The leads of an LED lamp may be preformed or cut to length prior to insertion and soldering into PC board.
- Iflead forming is required before soldering, care must be taken to avoid any excessive mechanical stress induced to LED package. Otherwise, cut the leads of LED tolength after soldering process at room temperature. The solder joint formed will absorb the mechanical stress of the lead cutting from traveling to the LED chip die attach and wirebond.
- It is recommended that tooling made to precisely form and cut the leads to length rather than rely upon hand operation.

## Soldering Conditions

- Care must be taken during PCB assembly and soldering process to prevent damage to LED component.
- The closest LED is allowed to solder on board is 1.59 mm below the body (encapsulant epoxy) for those parts without standoff.
- Recommended soldering conditions:

|  | Wave Soldering | Manual Solder <br> Dipping |
| :--- | :--- | :--- |
| Pre-heat Temperature | $105^{\circ} \mathrm{C}$ Max. | - |
| Pre-heat Time | 30 sec Max. | - |
| Peak Temperature | $250^{\circ} \mathrm{C}$ Max. | $260^{\circ} \mathrm{C} \mathrm{Max}$. |
| Dwell Time | 3 sec Max. | 5 sec Max. |

- Wave soldering parameter must be set and maintained according to recommended temperature and dwell time in the solder wave. Customer is advised to periodically check on the soldering profile to ensure the soldering profile used is always conforming to recommended soldering condition.
- If necessary, use fixture to hold the LED component in proper orientation with respect to the PCB during soldering process.
- Proper handling is imperative to avoid excessive thermal stresses to LED components when heated. Therefore, the soldered PCB must be allowed to cool to room temperature, $25^{\circ} \mathrm{C}$, before handling.
- Special attention must be given to board fabrication, solder masking, surface plating and lead holes size and component orientation to assure solderability.
- Recommended PC board plated through hole sizes for LED component leads:

|  | LED Component <br> Lead Size | Diagonal | Plated Through- <br> Hole Diameter |
| :--- | :--- | :--- | :--- |
| Lead size (typ.) | $0.45 \times 0.45 \mathrm{~mm}$ 0.636 mm 0.98 to 1.08 mm <br>  $(0.018 \times 0.018 \mathrm{in})$. $(0.025 \mathrm{in})$ | $(0.039$ to 0.043 in$)$ |  |
| Dambar shear- | 0.65 mm | 0.919 mm |  |
| off area (max.) | $(0.026 \mathrm{in})$ | $(0.036 \mathrm{in})$ |  |
| Lead size (typ.) $)$ | $0.50 \times 0.50 \mathrm{~mm}$ | 0.707 mm | 1.05 to 1.15 mm |
|  | $(0.020 \times 0.020 \mathrm{in})$. | $(0.028 \mathrm{in})$ | $(0.041 \mathrm{to} 0.045 \mathrm{in})$ |
| Dambar shear- | 0.70 mm | 0.99 mm |  |
| off area (max.) | $(0.028 \mathrm{in})$ | $(0.039 \mathrm{in})$ |  |

Note: Refer to application note AN1027 for more information on soldering LED components.
