BROADCOM®

Data Sheet

HSMF-C129

Tri-Color Top-Mount ChipLED

Description

The Broadcom® HSMF-C129 is a 4-pin tri-color RGB LED and comes in an industry-popular 0805 footprint. This surface-mount chipLED has low package height of 0.5 mm, which makes this product an ideal solution for applications that have head room constraints, such as wearables and handheld portable devices.

This chipLED comes with integrated zener diode that enables this part to achieve an ESD threshold of up to 8 kV for the blue and green colors. This chipLED offers industry-leading light output performance by using efficient and high brightness AlInGaP and InGaN LED materials.

This chipLED is compatible with reflow soldering process. For easy pick-and-place, parts are packed in tape and reel. Every reel is shipped from a single intensity and color bin for better uniformity control.

Features

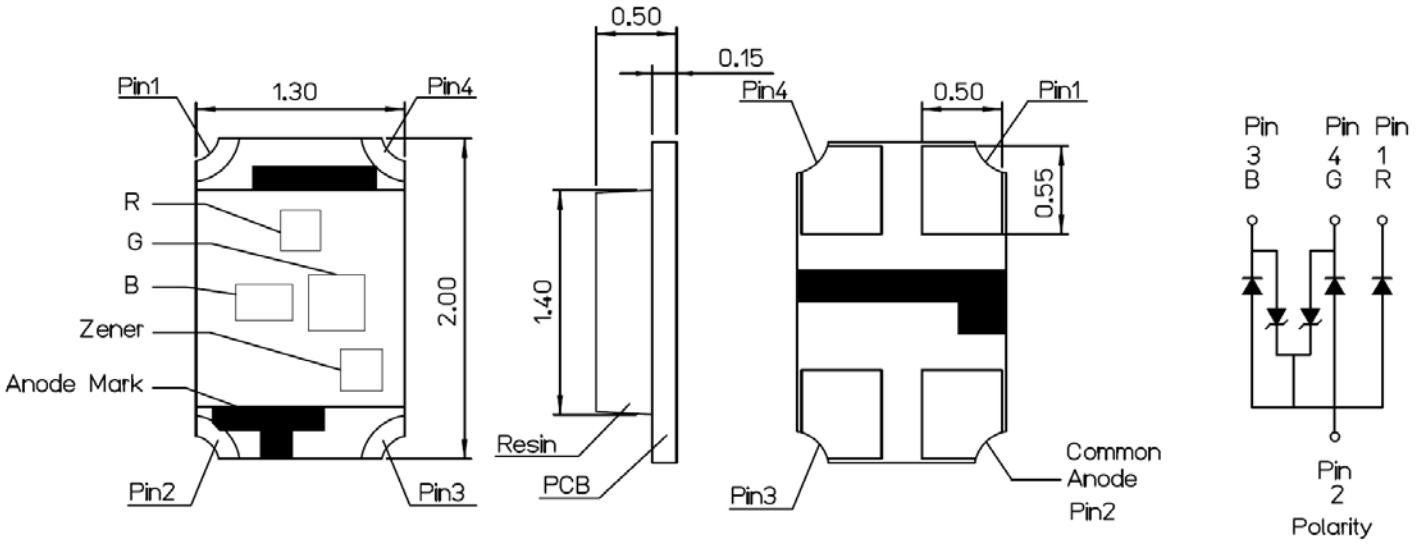
- LED with AlInGaP Red, InGaN Green and Blue
- Small package size
- Compatible with reflow soldering
- Available in 8-mm tape on 7-in. diameter reels

Applications

- Symbol indicator
- Keypad backlighting
- Push button backlighting

CAUTION! This LED is Class 1A ESD sensitive per ANSI/ESDA/JEDEC JS-001. Please observe appropriate precautions during handling and processing. Refer to Application Note AN-1142 for additional details.

Figure 1: Package Dimensions



NOTE:

1. All dimensions are in millimeters.
2. Tolerance is ±0.10 mm unless otherwise specified.
3. Encapsulation = diffused epoxy.

Absolute Maximum Ratings

Parameter	AlInGaP	InGaN		Units
	Red	Green	Blue	
DC Forward Current (one chip on)[a]	15	15	10	mA
DC Forward Current (three chips on)[a]	10	10	10	mA
Power Dissipation	36	58	39	mW
LED Junction Temperature	95			°C
Operating Temperature Range	–40 to +85			°C
Storage Temperature Range	–40 to +85			°C

a. Derate as shown in Figure 6 and Figure 7.

Optical Characteristics (T_J = 25°C, I_F = 10 mA)

Color	Luminous Intensity I_V (mcd)[a]	Dominant Wavelength λ_d (nm)[b]	Peak Wavelength λ_p (nm)	Viewing Angle $2\theta_{1/2}$ (Degrees)[c]
	Min.	Typ.	Typ.	Typ.
Red	18.0	623	633	140
Green	71.5	529	521	140
Blue	18.0	468	463	140

a. The luminous intensity, I_v, is measured at the mechanical axis of the LED package. The actual peak of the spatial radiation pattern may not be aligned with the axis.

b. The dominant wavelength, λ_d, is derived from the CIE Chromaticity Diagram and represents the perceived color of the device.

c. Viewing angle, $\theta_{1/2,}$ is the off-axis angle where the luminous intensity is ½ the peak intensity.

Electrical Characteristics at T_J = 25°C, I_F = 10 mA)

Color	Forward Voltage V_F (Volts)[a]		Reverse Current I_R (µA) at V_R = 5V[b]	Thermal Resistance, $R\theta_{J-S}$ (°C/W)[c]
	Min.	Max.	Max.	Typ.
Red	1.6	2.4	100	500
Green	2.9	3.9	100	500
Blue	2.9	3.9	100	500

a. Forward Voltage tolerance: ±0.1V.

b. Indicates product final test condition only. Long-term reverse bias is not recommended.

c. ion only. Long term reverse bias is not recommended.

Bin Information

Intensity Bin Limits (CAT)

Bin ID	Luminous Intensity, I_v (mcd)	
	Min.	**Max.**
M	18.0	28.5
N	28.5	45.0
P	45.0	71.5
Q	71.5	112.5
R	112.5	180.0
S	180.0	285.0

Tolerance ±15%.

Color Bin Limits (BIN)

Bin ID	Dominant Wavelength, λ_d (nm)	
	Min.	**Max.**
Red		
—	620	635
Green		
A	515	520
B	520	525
C	525	530
D	530	535
Blue		
A	460	465
B	465	470
C	470	475
D	475	480

Tolerance ±1.0 nm.

Indication of bin information on reel and packaging label:

CAT:	xxx —>	Red/Green/Blue Intensity bin
BIN:	xxx —>	Red/Green/Blue Color bin

CAUTION!

1. The preceding optical specifications are valid in the case where a single LED is illuminated.
2. The preceding product specifications *do not* provide any guarantee on color mixing, color consistency over time or uniformity in luminous intensity when more than one LED is illuminated.

Precautionary Notes

Soldering

- Do not perform reflow soldering more than twice. Observe necessary precautions of handling moisture sensitive device as stated in the following section.
- Do not apply any pressure or force on the LED during reflow and after reflow when the LED is still hot.
- Use reflow soldering to solder the LED. If unavoidable (such as rework), use hand soldering strictly controlled to the following conditions:
  - Soldering iron tip temperature = 310°C maximum
  - Soldering duration = 2 seconds maximum
  - Number of cycles = 1 only
  - Power of soldering iron = 50W maximum
- Do not touch the LED package body with the soldering iron except for the soldering terminals because it might cause damage to the LED.
- Confirm beforehand whether the functionality and performance of the LED is affected by hand soldering.

Handling of Moisture-Sensitive Devices

This product has a Moisture Sensitive Level 2a rating per JEDEC J-STD-020. Refer to Broadcom Application Note AN5305, *Handling of Moisture Sensitive Surface Mount Devices*, for additional details and a review of proper handling procedures.

- **Before use:**
  - An unopened moisture barrier bag (MBB) can be stored at < 40°C/90% RH for 12 months. If the actual shelf life has exceeded 12 months and the humidity indicator card (HIC) indicates that baking is not required, it is safe to reflow the LEDs per the original MSL rating.
  - Do not open the MBB prior to assembly (for example, for IQC). If unavoidable, properly reseal the MBB with fresh desiccant and HIC. The exposed duration must be taken in as floor life.
- **Control after opening the MBB:**
  - Read the HIC immediately upon opening the MBB.
  - Keep the LEDs at < 30°C/60% RH at all times, and complete all high-temperature-related processes, including soldering, curing, or rework, within 672 hours.
- **Control for unfinished reel:**

  Store unused LEDs in a sealed MBB with desiccant or desiccator at < 5% RH.
- **Control of assembled boards:**

  If the PCB soldered with the LEDs is to be subjected to other high-temperature processes, store the PCB in a sealed MBB with desiccant or desiccator at < 5% RH to ensure that all LEDs have not exceeded their floor life of 672 hours.
- **Baking is required if the following conditions exist:**
  - The HIC indicator indicates a change in color for 10% and 5% as stated on the HIC.
  - The LEDs are exposed to conditions of > 30°C/60% RH at any time.
  - The LEDs' floor life exceeded 672 hours.

  The recommended baking condition is: 60°C ±5ºC for 20 hours.

  Baking should only be done once.

Application Precautions

- The drive current of the LED must not exceed the maximum allowable limit across temperature as stated in the data sheet. Constant current driving is recommended to ensure consistent performance.
- Circuit design must cater to the whole range of forward voltage (V_F) of the LEDs to ensure the intended drive current can always be achieved.
- LEDs exhibit slightly different characteristics at different drive currents that might result in larger performance variations (that is, intensity, wavelength, and forward voltage). Set the application current as close as possible to the test current to minimize these variations.
- The LED is not intended for reverse bias. Use other appropriate components for such purposes. When driving the LED in matrix form, ensure that the reverse bias voltage does not exceed the allowable limit of the LED.
- Avoid rapid change in ambient temperature, especially in high-humidity environments, because this will cause condensation on the LED.
- If the LED is intended to be used in harsh or outdoor environments, protect the LED against damages caused by rain water, water, dust, oil, corrosive gases, external mechanical stress, and so on.

Eye Safety and Precautions

LEDs may pose optical hazards when in operation. Do not look directly at operating LEDs as it may be harmful to the eyes. For safety reasons, use appropriate shielding or personal protection equipment.
