6000 Series Buccaneer – circular connectors that combine the ease of use of a push/pull coupling mechanism with proven environmental sealing. Available with metal or plastic bodies, the range supports both data (USB and Ethernet), signal and mains power. Designed and independently tested to IP66, IP68 & IP69K standards, they are ideal for applications where ingress of dust and water must be avoided and where ease of connection, space and appearance are important considerations.

○ Secure, quick connector mating and release

○ 30° twist locking
  Tamperproof lock prevents accidental un-mating

○ IP66, IP68 and IP69K when mated
  Suitable for a wide range of dust and water borne environments

○ All plastic body version; UL94-V0 rated, UV stable,
  halogen free
  Light-weight, self-extinguishing material suitable for long-term
  outdoor use

○ Flex, Inline & panel mount body styles,with sealing caps
  Complete family of products maintain sealing integrity in all styles

○ Polarisation and visual alignment features
  Aids the correct mating of connectors

○ 2 to 22 Contacts – up to 16A, 277V rated
  Suitable for mains power to signal applications

○ 'Scoop proof' contacts
  Prevents damage through mis-mating – ideal for 'blind mating'
  applications

○ cULus, UL, VDE
  Internationally recognised certification

○ Screw, Crimp and Solder terminations available

## Flex Cable Connector

○ Mates with Inline or Panel Mounting versions PXP6011 & PXP6012
○ Push/pull locking ring with 30° twist locking
○ Plug or socket versions
○ Leading earth on 3 Contact connectors
○ 2, 3, 8, 16 & 22 Contact
○ Screw, solder and crimp termination

The thermal properties of the materials used in the construction of a connector limit the current carrying capacity. There are a number of factors that determine the amount of current that can be handled: contact spacing, size of cable, ambient temperature and the heat that is generated by the current passing through the connector.

The maximum current varies with different contact layouts, and because of these factors it is necessary to produce de-rating curves for each contact variant. This de-rating curve is specified in the standard IEC 60512 part 3. De-rating curves are plotted for each contact
carrier combination with the current being carried simultaneously by all contacts. These graphs show the heat rise generated as the current is increased.

The red line indicates the direct correlation between current applied and the measured temperature rise within the connector. The dotted blue line shows rated current and the green line is derived by applying a factor of 0.8 to the original plot data to give a de-rating curve. The dashed blue line shows the rated current.

The shaded area under the 0.8 curve shows the permitted operating area, and allows safe current vs ambient temperature characteristics to be determined.

— = tested operating limits
— = de-rated operating limits
-- = rated current
