# F-Series HYDRAULIC-MAGNETIC CIRCUIT BREAKER

The F-Series hydraulic-magnetic high amperage circuit breakers are designed to handle high current applications in extremely hot and/or cold locations. Due to its time-proven hydraulic-magnetic design, the F-Series load sensing mechanism is insensitive to changes in ambient or enclosure temperature, providing a consistent trip point over temperatures ranging from -40°C to +85°C. Additionally, the F-Series circuit breakers come with a choice of overload time delays, making them ideal for critical applications having inductive loads.

Further, the F-Series breakers are available up to 700A and an optional 25 millivolt metering shunt construction provides a safe method for monitoring current flowing through the breaker by simply connecting a meter with light gauge wire to the appropriate terminals located on the shunt housing at the rear of the breaker. Applications can be customized by measuring and displaying percentage of current, watts or safe/danger zones.

# **Product Highlights:**

- AC ratings to UL 489
- DC voltage ratings up to 700A with metering shunt section
- Consistent trip point over temperatures ranging from -40°C to +85°C
- · Optional 25 millivolt metering shunt construction

## **Typical Applications:**

- · Ideal for applications under extreme temperatures
- Higher Amperage Applications
- · Battery Disconnect Systems
- · Solar Power Systems
- Military

Per UL requirement, an "Anti-Flash Over Barrier" is supplied between poles on multipole

breakers with 3/8 - 16 stud terminals (Terminal Code 1) on AC rated breakers only. Front connected breakers can also be front mounted by utilizing the supplied front panel

mounting inserts. Terminal connections must be made before mounting.

Box Wire connector will accept #6 through 250 MCM copper wire.

Agency codes G & T must have ON-OFF or dual legends. Agency code J must have
