## Sealed Metal Toggle

The MS-Series hydraulic-magnetic circuit breaker with sealed metal toggle actuator is compact in size, but ruggedly designed to meet IP68 requirements and MIL-PRF-39019F ingress protection when panel mounted. Additionally, it is MIL-PRF-55629 and MIL STD 202 compliant, making it ideal for COTS military applications, crucial communication equipment and other mission critical components. MS-Series breakers are available as a one to three pole configuration with ratings from 0.02 to 30 amps, up to 240VAC/65VDC and 3,000 amps max IC.

## Typical Applications

- Vehicles
- Communication Equipment
- Generators • Power Supplies

## Design Features

SEALS
IP68 Designed and tested to comply with MIL-PRF-39019F Ingress Protection

## COMPACT SIZE

Max performance in compact size: 0.20-30
Amps; 65 VDC, 240 VAC 120/240 VAC

TERMINAL BARRIERS
Meet UL 1077 Spacing Requirements

OPTIONAL AUXILIARY SWITCH

## Notes:

1 Short Circuit Current Rating (SC) Codes - The short-circuit current rating, followed by a letter and number designating the test conditions and any calibration following the short-circuit test as defined below:
U - Indicates that the short circuit test was performed without a series fuse
1 - Indicates that a re-calibration was not performed as part of the short circuit testing
3 - Indicates that the protector has proven to be suitable for further use after the short circuit test
Re-calibration, dielectric strength and voltage withstand tests were performed after the short circuit testing
2 - Inc rating obtained with a 50 Amp type gL fuse

## Notes:

1 Delay Curves $12,14,22,24,32,34,62,64,72,74,92,94$ : Breakers to hold $100 \%$ and must trip at $135 \%$ of rated current and greater within the time limit shown in this curve.
2 Delay Curves 10, 20, 30: Breakers to hold $100 \%$ and must trip at $150 \%$ of rated current and greater within the time limit shown in this curve.
3 All Curves: Curve data shown represents breaker response at ambient temperature of $77^{\circ} \mathrm{F}\left(25^{\circ} \mathrm{C}\right)$ with no preloading. Breakers are mounted in standard wall-mount position.
4 The minimum inrush pulse tolerance handling capability is 12 times the rated current on standard delays and 18 times the rated current on high inrush delays. These values are based on a $60 \mathrm{~Hz} / / 2$ cycle, 8.33 ms pulse. High inrush delays should be specified for applications with high initial surge currents of short duration, such as switching power supplies, highly capacitive loads and transformer loads.
