# Monitoring Relays Pump alternating Type DLA71 

## Product Description

DLA71 is relay made to avoid big inrush current. alternate 2 or 3 pumps in a multiple pump system. In case of need (i.e.: overflow) the second, or even the third pump can be activated together with the first one. In case more than one pump is required to start at the same time, the pumps start 10 s after the previous to

The LED indicates the state of the alarm and the output relay.
35.5 mm wide housing suitable both for back and front panel mounting

- Pump alternating relay for 2 or 3 pumps
- Output: $2 \times 5$ A SPST relay or $3 \times 5$ A SPST
- For mounting on DIN-rail in accordance with DIN/EN 50022
- 35.5 mm DIN-rail housing
- LED indication for relay and power supply ON
- Galvanically separated power supply
- Built-in delay for the second or third pump in case of simultaneous activation is required
- Built-in function for automatic rotation of the pumps

## Type Selection

| Mounting | Output | Function |
| :--- | :--- | :--- |
| DIN-rail |  | $2 \times$ SPST | | For two pumps |
| :--- |
| DIN-rail |

## Input Specifications

| Contact input | Terminals |
| :--- | :--- |
| DLA71...2P (normal mode) |  |
| ON/OFF 1 pump | C, S1 |
| ON/OFF 2 pumps | C, S2 |
| DLA71...2P (differential mode) |  |
| first pump starts | C, S1 |
| first pump stops | C, S3 |
| second pump start | C, S2 |
| second pump stop | C, S4 |
|  |  |
| DLA71...3P (normal mode) | C, S1 |
| ON/OFF 1 pump | C, S2 |
| ON/OFF 2 pumps | C, S3 |
| ON/OFF 3 pumps |  |
|  | C, S1 |
| DLA71...3P (full mode) | C, S2 |
| ON 1 pump | C, S3 |
| ON 2 pumps | C, S4 |
| ON 3 pumps | $>10 \mathrm{k} \Omega$ |
| OFF all pumps | $<1 \mathrm{k} \Omega$ |
| Disabled | $<25 \mathrm{~V}$ |
| Enabled | $<2 \mathrm{~mA}$ |
| Voltage | Current |
| Empting mode | N.O. contacts |
| Filling mode | N.C. contacts |

## Supply Specifications

| Power supply <br> Rated operational voltage <br> through terminals: <br> A1, A2 or A3, A2 | Overvoltage cat. III <br> (IEC 60664, IEC 60038) |
| :--- | :--- |
|  | B48: |
|  | B23: |
|  | $24 / 48 \mathrm{VAC} \pm 15 \%$ <br> 45 to 65 Hz, insulated <br> $115 / 230 \mathrm{VAC} \pm 15 \%$ <br> 45 to 65 Hz, insulated |
| Dielectric voltage | $4 \mathrm{kV}(1.2 / 50 \mu \mathrm{~s})$ |
| Supply to input <br> Supply to output <br> Input to output | $4 \mathrm{kV}(1.2 / 50 \mu \mathrm{~s})$ |
| Rated operational power <br> AC | $4 \mathrm{kV}(1.2 / 50 \mu \mathrm{~s})$ |

## General Specifications

| Reaction time |  |
| ---: | :--- |
| Closing input <br> Opening input | $<100 \mathrm{~ms}$ |
| Minimum delay to activate <br> the rescue pumps | 10 s |
| Continous working time to <br> activate the rotation pumps | $6 \mathrm{~h} \pm 10 \%$ |

## General Specifications (cont.)

| Indication for |  |
| :---: | :---: |
| Power supply ON | LED, green, steady |
| One Pump ON | as above, flashing 1 Hz |
| Two Pumps ON | as above, flashing 2 Hz |
| Three Pumps ON(DLA71...3P) | as above, flashing 3 Hz |
|  | Note: if more than one pump is active, the indication refers to the pump started last. |
| First pump activated after power up | Random |
| Environment | (EN 60529) |
| Degree of protection | IP 20 |
| Pollution degree | 3 |
| Operating temperature | -20 to $60^{\circ} \mathrm{C}$, R.H. < $95 \%$ |
| Storage temperature | -30 to $80^{\circ}$ C, R.H. $<95 \%$ |
| Housing |  |
| Dimensions | $35.5 \times 81 \times 67.2 \mathrm{~mm}$ |
| Material | PA66 or Noryl |
| Weight | Approx. 135 g |
| Screw terminals |  |
| Tightening torque | Max. 0.5 Nm acc. to IEC 60947 |
| Product standard | EN 60255-6 |
| Approvals | UL, CSA |
| CE Marking | L.V. Directive 2006/95/EC |
|  | EMC Directive 2004/108/EC |
| EMC |  |
| Immunity | According to EN 60255-26 |
|  | According to EN 61000-6-2 |
| Emissions | According to EN 60255-26 |
|  | According to EN 61000-6-3 |

## Mode of Operation

DLA71 is made for pumping systems where 2 or 3 pumps are in parallel. It lets the pumps work alternatively, allowing more pumps to work togheter in case of need.

## Example 1

(emptying a basin, 2-pump system)
As soon as the liquid reaches switch S1 one pump starts. As soon as S1 switches back the pump stops. When switch S1 is activated again the other pump starts allowing uniform wear and tear of all the pumps. If switch S 2 is activated both pumps start (2 pumps running at the same time). When S2 switches back the pump running since most time stops.

## Example 2

(emptying a basin, 2-pump system, differential mode)
In this case the pumps are separately started and stopped by the two pairs of switches S1, S2 and S3, S4. Appropriate positioning allows the pumps to work together in case of need.

Note (2-pump system)
If the system is continuously working with only one pump, after working for 6 hours, DLA71 stops the pump and the second one automatically starts.
This rotation is repeated every 6 hours of single and continuative work of a pump.

## Example 3

(emptying a basin, 3-pump system, normal mode) The system works exactly as
described in example 1 except that if switch S3 is reached three pumps work at the same time. When they switch back the pumps are turned off in sequence starting from the one running longer.

## Example 4

(emptying a basin, 3-pump system, full mode)
As soon as the liquid reaches switch S1 one pump starts. When it drops below switch S4 it stops. If switch S 1 is triggered again another pump starts. If switch S2 is activated a second pump starts (rescue function). If switch S3 is activated all the pumps operate. The only switch to stop all the pumps active at a certain time is S 4 .

Note (3-pump system)
If the system is continuously working with only one pump, after working for 6 hours, DLA71 stops the pump and the second one automatically starts. If also the second pump works continuously alone for 6 hours, it is stopped and the third pump is then started.
If a couple of pumps is continuously working for 6 hours, the one running for more time stops and the free one starts.
This rotation is repeated every 6 hours of continuative work of a pump or a couple of pumps.

Note (2 and 3-pump systems)
In case the task is to fill a basin, all the switches are reversed in the basin itself.
