Motor Controllers
DMPUC, DIN-Rail
Motor Protection Unit

CARLO GAVAZZI

DMPUC
- **Controlling motor operation**
- **Motor thermal protection**
- **Phase sequence, phase loss, unbalance, locked rotor, stall, earth fault and earth leakage protection**
- **Alarm set-points adjustable by the user**
- **TRMS measurements of distorted sine waves (voltages/currents)**
- **3-phase current range up to 2000A with external current transformers or pass-through 5A**
- **3-phase voltage range up to 690V**
- **Electrical variables monitoring**
- **Monitoring of operating hours, down time, number of starts**
- **Communication port, included in the main module**
- **Modular motor management system**
- **DIN-rail mounting (expansion module mounted side by side from main module)**
- **Additional I/O expansion modules**
- **Easy connections management and installation**
- **Power Supply: 24 VDC**
- **Event datastamping**
- **Variable datalogging**

DMPUC-MBT

Model
Type

Product Description

DMPU is a modular electronic motor protection relay that provides protection, monitoring and metering functions for 3-phase, constant or dual speed, AC induction motors. The modular housing is for DIN-rail mounting with IP20 protection degree.

The device, in its basic configuration, is able to measure the electrical motor variables (current, voltage, harmonic distortion, etc), to control the thermal image of the motor, and also its load, operational status (start-stop, star-delta starting, 2 speeds, alarm set-point and other functions adjustable by the user), motor temperature and includes an event data-logger.

The current measurement is carried out by means of 3 external current transformers, or by pass-through holes up to 5 A.

Being provided with a serial communication module, it is possible to gather all the relevant instantaneous values and transmit them to a host control system for data collection and process control. Profibus and Modbus TCP protocols are available for a high connectivity to the most used fieldbus systems.

Through the optional remote display (for panel mounting) it is possible to see the instantaneous values and status and also to modify the set-points and the values of other parameters. The whole programming of the unit is to be performed via configuration software.

Additional optional modules allow the collection of additional PTC and PT100 values for coils and bearing temperature control, and additional input/outputs are used for some local on-board logic functions.

Type Selection

DMPUC-PRB	Main module + Profibus.	DMPUC-65	Currents and voltages module.
DMPUC-MBT	Main module + Modbus TCP/IP.	DMPUC-R2	I/O module.
DMPUC-05	Currents and voltages module (pass-through holes).	DMPUC-EL	Earth leakage current module

Specifications are subject to change without notice. Pictures are just an example. For special features and/or customization, please ask to our sales network. 05/09/2013

CARLO GAVAZZI

DMPUC-MBT and DMPUC-PRB

- **Main module for DMPUC**
- **Communication port for Profibus (DMPUC-PRB) or Modbus TCP (DMPUC-MBT)**
- **Auxiliary dual RS485 communication port (Modbus) to display or PC**
- **RJ 11 connection to measurement module**
- **Internal bus connecting additional modules**
- **3 PTC or PT100 or digital inputs**
- **Data logging and event data stamping**
- **24 VDC ±20% power supply input**
- **Dimensions: 2-DIN module**
- **Protection degree: IP20**

LED Specification DMPUC-MBT and DMPUC-PRB

LED			
Type	Dual color	Green flashing	Power supply ok, configuration error.
Status and color		Red fixed	Communication error, internal bus.
Green fixed	Communication and power supply ok.		

Input Specification DMPUC-MBT and DMPUC-PRB

Digital inputs		**Temperature**	
Number of input	Max 3, (no common reference), including the already used thermal inputs.	Number of input	Max 3, including the already used thermal inputs.
Working modes	Each input can be configured as a switch or as a toggle.	Temperature probe	PT100 or PTC (programmable via DMPU-PS software).
Switch	When the input is activated the value is ON; when the input is deactivated the value is OFF.	Number of wires	2-wire connection
		PT100	Detecting short-circuit ($<15\Omega$) and wire braking ($>10k\Omega$).
Toggle	Each time the input goes from de-activate to activate the value chages state.	Range	-50° to +850°
		Resolution	1°C/°F
		Accuracy	±(0.5% FS)
Activation mode	Each input is programmable to be considered active when the contact is closed or when it is open when used as a switch, while only at pressure when used as a button.	PTC (3 in series)	According to EN 60947-7-8
		PTC	Setpoint 3.1 kΩ , release 1.65 kΩ, Detecting short-circuits (<0.02 kΩ) and wire breaking ($>10k\Omega$).
		Temperature drift	<150 ppm/°C at 850°C FS
Type	Contact resistence or NPN.	Engineering unit	Selectable °C or °F by software (the same in all the temperature inputs).
Contact reading voltage	3.3VDC		
Contact reading current	Max. 0.45mA	Insulation	See the table "insulation between inputs and outputs".
Contact resistence	$\leq 1k\Omega$, closed contact; $\geq 20k\Omega$, open contact.		
NPN	V_{ON} <1V, V_{OFF}> 2V.		
Acquisition time	$\leq 200ms.$		
Insulation	See the table "Insulation between inputs and outputs".		

Communication Specification

RS485 port	
Type	Bidirectional (static and dynamic variables and parameters).
Functions	Configuring the device, modifying set-point parameter, digital virtual input and monitoring the measured variables by DMPU-PS software.
Connection	1 x RJ11 soket on the bottom side (on the right) or 2-wires (to reduce the noise use a shielded cable and connect the shield to GND terminal and to the ground, in only one point).
Address	1, selectable by DMPU-PS software.
Protocol	Modbus RTU.
Factory-defined data format	Data bits "8", parity "none", stop bit "1".
Baud-rate	Default: 9.6k. Selectable by software: 9.6k, 19.2k, 38.4k, 115.2k.
Insulation	See the table "insulation between inputs and outputs".
Note	During the connection by software (through RJ11 connector) the DMPU-HMI display must be disabled (see the display instruction to enable this mode).

Ethernet port (DMPUC-MBT)	
Type	Bidirectional (static and dynamic variables and parameters).
Functions	Configuring the device, modifying set-point parameter, digital virtual input and monitoring the measured variables by DMPU-PS software or supervision system.
Connection	1 x RJ45 soket on the top side.
IP configuration	Fixed IP address (no DHCP), subnet mask, default gateway, port (selectable by DMPU-PS software).
Protocol	Modbus TCP/IP.
Factory-defined values	IP address "192.168.1.2", subnet mask "255.255.255.0", default gateway "192.168.1.1", port "502".
Insulation	See the table "Insulation between inputs and outputs".

Profibus port (DMPUC-PRB)	
Function	Digital virtual input and monitoring the measured variables by supervision system.
Connections	1 x DB-9 sochet on the top side.
Address	2-126, selectable by DMPU-PS.
Protocol	Profibus DP-V1.
Factory-defined address	126
Baud-rate	9.6k, 19.2k, 45.45k, 93.75k, 187.5k, 500k, 1.5M, 3M, 6M, 12M. Auto baud rate identification.
Telegram	Max. 255 characters.
Physical layer	RS485
Insulation	See the table "insulation between inputs and outputs".

Power Supply Specification

| **DMPUC-MBT and DMPUC-PRB**	
Power supply	24VDC ± 20% from screw terminals.
Power consumption	2W; startup peak current <1.8A.
Suggested power supply	SPM3241

CARLO GAVAZZI

Modules Configuration

Minimal configuration	1 main module (DMPUC-MBT or DMPUC-PRB).
	1 measurement module (DMPUC-05 or DMPUC-65).
Maximum configuration	
With DMPUC-EL	1 main module (DMPUC-MBT or DMPUC-PRB).
	1 measurement module (DMPUC-05 or DMPUC-65).
	9 I/O modules (DMPUC-R2).
	1 earth leakage current module (DMPUC-EL).
Without DMPUC-EL	1 main module (DMPUC-MBT or DMPUC-PRB).
	1 measurement module (DMPUC-05 or DMPUC-65).
	10 I/O modules (DMPUC-R2).

Connections

DMPUC-MBT and DMPUC-PRB	
Power supply connections	Screw-type, 2 x 1.5 mm^2 terminal blocks.
Input connection	Screw-type, 6 x 1.5 mm^2 terminal blocks for 3 x P100/PTC (2 wires) or 3 digital inputs.
Communication connection RS485	One port with two twins terminals: 1 x RJ11 (on the right of the bottom side) for PC connection and screw type 3x1.5 mm² Terminal box for DMPUC-HMI display connection.
Modbus TCP/IP	1 x RJ45 (DMPUC-MBT)
Profibus	1 x DB-9 (DMPUC-PRB)
Measurement module connection	1 x RJ11
Screw tightening torque	0.4 Nm / 0.8 Nm (min./max.).

DMPUC-05 and DMPUC-65

- Measures 3-phase current, 3-phase voltage with neutral
- RJ 11 connection to main module
- Pass-through version up to 5A or 65A
- 2 relay outputs
- Split core housing for 5A version
- Dimensions: 3-DIN module
- Protection degree: IP20

Input Specification DMPUC-05 and DMPUC-65

Measurement system	3-phases (with or without neutral). Aron connection: only with DMPUC-05 and proper wiring.	Power factor	±[0.002+1.5%(1.000 - "PF RDG")]
Working frequency	45 to 65 Hz	Reactive power	±(2% FS)
Current inputs	TRMS measurement of distorted waves. The sampling frequency is automatically calculated.	Reactive power resolution	1% FS
		Harmonic distorsion	±1% FS (FS=100%)
		Active Energy	Class1
		Reactive Energy	Class2
Connection type (DMPUC-05)	3-phase split-core pass-through.	Leakage current	±(1% FS)
(DMPUC-65)	3-phase pass-through	Leakage current resolution	1mA
Current range (DMPUC-05)	100mA - 6A	**Temperature drift**	≤ 200ppm/°C
(DMPUC-65)	600mA - 65A	**Sampling rate**	3200 samples/s @ 50Hz; 3840 samples/s @ 60Hz.
Hole size (DMPUC-05)	9 mm	**Measurements refresh time**	100ms
(DMPUC-65)	12 mm	**Measurements Method**	TRMS
Max selectable primary current	CT programmable from 1 to 9999.	**Digital filter**	
		Filter operating range	0 to 99.9% of the input electrical scale
Harmonic distortion	THD, up to 32nd harmonic.	Filtering coefficient	Filtering coefficient 1 to 255
Voltage inputs		Filter action	Display, alarm, analogue and serial outputs (all the variables).
Voltage range	3-phase, 100 to 690 VLL (±15%).		
Max selectable voltage ratio	VT programmable from 1 to 9999.	**Crest factor**	≤ 3
		Current overload	
Neutral connetion	Available	Continuos	
Harmonic distortion	THD, up to 32nd harmonic.	DMPUC-05	6A
Accuracy	Relevant to control function, serial communication data (@25°C ±5°C, R.H. @60%, 48 to 62 Hz).	DMPUC-65	65A
		For 20s	
		DMPUC-05	40A (accuracy 5%)
		DMPUC-65	400A (accuracy 5%)
Current	±(0.5% FS)	For 500ms (DMPUC-05)	200A Max @50Hz
Current resolution	0.2% FS	For 10ms (DMPUC-65)	1950A Max @50Hz
Phase-neutral voltage	±(0.5% FS)	**Voltage overload**	
Phase-phase voltage	1% FS	Continuos	1.2 Un
Voltage resolution	0.1% FS	For 500ms	2 Un
Frequency	±0.1Hz (45 to 65Hz)	**Input impedance**	
Active power	±(1% FS)	Volatge input	> 1MΩ
Active power resolution	0.5% FS		

Output Specification DMPUC-05 and DPMUC-65

Digital output

Number of outputs	2
Type	SPST NO relay (NE or ND programmable by software).
AC1	5AAC @ 250VAC
DC12	5ADC @ 24VDC
AC15	1.5AAC @ 250VDC
DC13	1.5ADC @ 24VDC

Function	Programmable by software
Activation delay	≤100ms
Insulation	See the table "insulation between inputs and outputs".

Power Supply Specification

DMPUC-05 and DMPUC-65

Power supply	Self-power supplied through the communication bus.
Power consumption	2W

Connections

DMPUC-05 and DMPUC-65

Connection to main module	Supplied cable (60 cm), 1 x RJ11 for power supply and communication of measured data.
Output connection	Screw-type, 4 x 1.5 mm^2 terminal blocks.
Screw tightening torque	0.4 Nm / 0.8 Nm (min./max.)

Function	Programmable by software
Activation delay	<0.150ms
Insulation	4kV against inputs and internal bus.

Power Supply Specification

DMPUC-EL

Power supply	Self-power supplied through the communication bus.
Power consumption	0.8W

Connections

DMPUC-EL

Connection to main module	By internal bus.
Input-output connection	Screw-type, 8 x 1.5 mm^2 terminal blocks.
Screw tightening torque	All outputs 0.4 Nm / 0.8 Nm (min./max.).

Wiring Diagrams DMPUC-EL

The wiring diagram for core balance transformer depends on the earth leakage curren setpoint (I_{SEL}) and the transformer ratio (R_{CTEL}); calculate the P value according of the following formula to define when to use the wiring diagram (P<694) or (P≥694).

$$P = \frac{I_{SEL}}{R_{CTEL}} \times 5 \times 10^5$$

General Specifications

Operating temperature	-25° to +55°C (-13°F to 131°F) (R.H. < 90% non-condensing @ 40°C).
Storage temperature	-30° to +70°C (-22° to 140°F) (R.H. <90% non-condensig @ 40°C).
Installation category	Cat. III (IEC60664, EN60664)
Insulation (for 1 minute)	See the table "Insulation between inputs and outputs".
EMC	
Electrostatic discharges	According to EN62052-11 15kV air discharge.
Immunity to irradiated	Test with current: 10V/m from 80 to 2000MHz.
Elettromagnetic fields	Test without current: 30V/m from 80 to 2000MHz.
Immunity to burst	On current and voltage measuring inputs circuit: 4kV.
Immunity to conducted disturbances	10V/m from 150kHz to 80MHz.
Surge	On current and voltage measuring inputs circuit: 4kV.
Radio frequency suppression	According to CISPR 22

Functions Description (cont.)

Block management	Each variable defined as "Block" in the table "Variable List" is associated with a monitoring variable function. This function defines the ON or OFF block status. Each block can be connected to each other if the function depends on other block status. The function parameters are set through the DPMU-PS software configuration. Up to 32 blocks defined as "Block status" are available.	ANSI64	Measures the vector sum of the three phase current (neutral isn't present). The sum is earth fault current.
		ANSI66$_{SH}$	Monitors that the number of starts during the last set time period is lower than max starts set point.
Monitoring functions		ANSI66$_{MTBS}$	Monitors the time since previous start.
Input		ANSI66$_{MTFLS}$	Monitors the time since previous stop.
Digital input	Monitors the contact or PTC status. Each input is programmable to be considered active when the contact is closed or when it is open when used as a switch, while only at pressure when used as a button.	ANSI64EL	Monitors if the earth leakage current is above the set-point during a set-point time.
		ANSI48	Prevents the locked rotor condition at motor start by monitoring the current.
		ANSI51LR	Prevents the locked rotor condition during motor running by monitoring the current.
Temperature input	Monitors the PT100 temperature. It is based on two set-point. 4 different configuration with under /over level (with hysteresis) or in/out window (without hysteresis) are available.	ANSI37	Monitors if any of the phase currents measured is below the set-point current during a set point time.
Istantaneous variables	Monitors the selected instantaneous variable. It is based on two set-point. 4 different function configuration with under /over level (with hysteresis) or in/out window (without hysteresis) are available.	ANSI27S	Monitors if any of the phase - phase voltages is too low during the set time.
		ANSI59	Monitors if any of the phase - phase voltage is too high during a set-point time.
		ANSI47	Monitors if the phase sequence is L1-L2-L3 or L1-L3-L2.
ANSI functions		ANSI27D	Monitors if at least one phase - phase voltage drops below the 70% of mains voltage.
ANSI49	Allows to protect the motor against damage due to thermal effects wich take place in overload conditions, starting from current measurement. The protection function trips when motor heating, i.e. the heat quantity in the motor, (represented by the TCU parameter - Thermal Capacity Used) reaches 100% of the maximum one for that specific motor.	Counters/timers	Based on one set-point (in seconds with the timer, in counts with the counter). This function depends on other blocks status. Connect two blocks to start/increase the timer/counter and reset it.
		Internal counter	It is based on one set-point. The block status is activated when the internal counter goes above the set-point.
ANSI46	Monitors inverse current which is one of the main causes of motor heating.	Output	
ANSI50	Monitors if any of the phase currents measured is too high.	Relay output	This function depends on other blocks status. Connect one or more blocks to open / close the relay (the output is activated when at least one of the selected block status is activated). NE or ND programmable.

Functions Description (cont.)

Latch reset	Internal output to reset all the active block status which have been set for latching. Each variable defined as "variable list" could be set for latching.	Variable monitoring	The software allows to monitor in real time the variables value or/and the used blocks status of the listed variables in the "Variable list" table (see the "Monitor" columns).
Logic functions	This function depends on other blocks status (up to 6). This block status depends on the state of up to 6 other blocks. This dependence is set through elementary logic functions (OR, AND and NOT).	**Label**	A label (defined by user) could be associated at each variable defined as "label" in the table "variable list".

Data Logger Functions

Data base logging

Available variables	See table "Variable List".
Max number of variables	Up to 20.
Memory capacity	Max 9999 data with date/hour reference based on FIFO storage.
Variable type	Average values on time windows.
Time window	Programmable, from 60s to 3600s.

Fast data logger

Available variables	See table "Variable List".
Max number of variables	Up to 20
Memory capacity	Max 9999 data with progressive number based on STACK storage.
Variable type	Instantaneous values from the start event.
Time window	Fixed, 100 ms.

Data event logging

Available variables	See table "Dataevent variable list"; each listed variable can be enabled or disabled for data-event storing.
Memory capacity	Max 9999 data with date/hour reference based on FIFO storage.
Trigger	By event.
Event timing resolution	<1s (if more than one event take place in 1s they are registered but the correc sequence isn't guaranteed).

Data Event Variable List

| Variables	Description
START	Start up Motor
RUN/STOP	Run/Stop Motor
ERR_{CONF}	Module configuration Error
RST_{DB}	Data base logging reset
RST_{FS}	Fast data logger reset
RST_{EV}	Data event logging reset
RST	Reset command (latch)
PW_{ON}	Power OFF
PW_{OFF}	Power ON
IN_1 to IN_{23}	Digital input (23 available)
OUT_1 to OUT_{22}	Relay outputs (22 available)
BLK_1 to BLK_{32}	Used blocks status (32 available)

Variable List

Variables	Block	Block status	Latch function	Label	Data logger functions	Monitor Value	Monitor Block status	Description
Inputs								
IN_1 to IN_{23}	✓	✓	✓	✓	✓	✓	✓	Digital input (up to 23 available)

These current transformers are suggested according to the nominal and locked rotor currents; for particular needs see the other current transformer types provided by Carlo Gavazzi (eg. current transformers with different mounting or housing).

Specifications are subject to change without notice. Pictures are just an example. For special features and/or customization, please ask to our sales network. 05/09/2013
Mounting and Positioning
Connect all module (except DMPUC-05) side by side according to the order defined while configuring the device. The first module must be DMPUC-MBT or DMPUC-PRB (main module). If it's used more than one DIN-rail use the internal bus adaptor DMPUC-CC to connect the different groups of modules.

Accessories

Code	Description
DMPU-PS	DMPUC-MBT/DMPUC-PRB programming software (included with DMPU-CPC cable or downloadable from the WEB)
DMPUC-HMI	DMPUC programmable display interface
DMPU-PSHMI	DMPUC-HMI programming software (included with DMPU-PS software)
DMPUC-CC	DMPUC Adaptor to internal bus-to-RJ connector
DMPU-CPAN	DMPUC cable for panel connector
DMPU-CPC	DMPUC cable for PC connection (included with the DMPU-PS software)
