Description

Inductive proximity sensors with 40 mm x 40 mm rectangular housings for use in harsh ambient conditions to detect metal objects without contact and wear-free.

The sensors generate an electromagnetic field which interacts with the detected object and are characterized by a long service life and extreme ruggedness.

The long sensing distance of up to 40 mm makes them particularly suitable also for use in conveyor systems, assuring a stable and reliable detection even in harsh environments, also thanks to the integrated advanced electronics which ensures optimal performance with temperature variations.

Applications

- · Non contact detection of metal objects in general position-sensing and presence-sensing in industrial applications
- Conveyor systems, material handling and logistic, agriculture, escalators

Main functions

- Easy and quick mounting or replacement without the need of additional tools thanks to the plug-and-play mounting system
- Rotating sensor head in 5 different positions allows maximum flexibility in all applications
- Reliable and accurate detection in the whole extended temperature range, thanks to the integrated advanced microprocessor based electronics
- Safer installation thanks to the long sensing range up to 40 mm
- Reliable switching performance even in harsh environments with low and high temperature, and enclosure rating IP68 and IP69K
- · Sensor switching and operating status can be clearly seen from any directions thanks to the 4 corner LEDs
- · Integrated diagnostic functions with flashing LEDs in the event of short-circuit or overload

Sensing

Detection

Rated operating distance S _n	22 to 40 mm: depending on version (flush or non-flush)
Reference target	The operating distance is measured according to IEC 60947-5-2, using a standard target moving axially. This target is square shape 1 mm thickness, made of steel e.g. type Fe 360 as defined in ISO 630 and it shall be of the rolled finish. The length of the side of the square is equal to – the diameter of the circle inscribed on the active surface of the sensing face, or – three times the rated operating distance S _n whichever is greater
Assured operating sensing distance (S _a)	$0 \le S_a \le 0.81 \text{ x } S_n \text{ (e.g. with } S_n \text{ of } 40 \text{ mm}, S_a \text{ is } 0 \dots 32.4 \text{ mm})$
Effective operating distance (S _r)	$0.9 \times S_n \le S_r \le 1.1 \times S_n$
Usable operating distance (S _u)	$0.9 \times S_r \le S_u \le 1.1 \times S_r$
Hysteresis (H)	120%

Correction factors

The specific operating distance S_n refers to defined measuring conditions. The following data have to be considered as general guidelines.

Fe360: Steel; CrNi: Chrome-nickel; CuZn: Brass; Al: Aluminium; Cu: Copper; Sr: Effective operating distance.

The rated operating distance is reduced by the use of metals and alloys other than Fe360. The most important reduction factors for inductive proximity sensors are shown in the figure.
