Teach functions

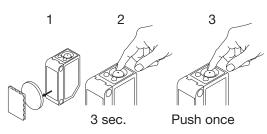

Normal operation, optimized switching point

- 1. Line up the sensor with the reflector. Yellow LED and Green LED are ON.
- Press the button for 3 seconds until both LEDs flashes simultaneously.
 (The first switch point is stored)
 - (The first switch point is stored)
- 3. Place the object between the sensor and reflector in the detection zone.
- Press the button once and the sensor is ready to operate (Green LED ON, Yellow LED ON) (The second switch point is stored)

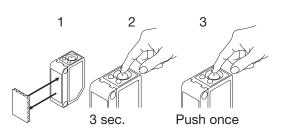

For maximum sensing distance (default setting)

- 1. Line up the sensor with the reflector, place a new transparant object between the sensor and reflector in
- the detection zone. Yellow LED is OFF and Green LED is ON.
- 2. Press the button for 3 seconds until both LEDs flashes simultaneously.
- (The first switch point is stored)
- Press the button a second time and the sensor is ready to operate (Green LED ON, Yellow LED ON) (The second switch point is stored)

For the most transparent objects

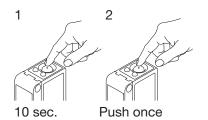

- 1. Line up the sensor with the reflector. Yellow LED and Green LED are ON.
- Press the button for 3 seconds until both LEDs flashes simultaneously. (The first switch point is stored)
- Press the button a second time and the sensor is ready to operate (Green LED ON, Yellow LED ON) (The second switch point is stored)

For make or break set-up (N.O. or N.C.)

- 1. Press the button for 10 seconds, until the green LEDs flashes.
- 2. While the green LED flashes, the output is inverted each time the button is pressed. Yellow LED indicates N.O. function selected.

If the button is not pressed within the next 10 seconds, the current output is stored.
