

## Product Description

The PD30CNP06 sensor family comes in a compact $10 \times 30 \times 20 \mathrm{~mm}$ reinforced PMMA/ABS housing.
The sensors are useful in applications where high-accuracy detection as well as small size is required.
Compact housing and high power LED for excellent per-formance-size ratio.

The Teach-In function for adjustment of the sensitivity makes the sensors highly flexible. The output type is preset (NPN or PNP), and the output switching function is programmable ( NO or NC ). The mute function can be used for testing the sensor for: Malfunctioning, disconnection, optical axis adjustment, dusty and dirty lenses.

- Miniature sensor range
- Range: 6 m , with reflector
- Sensitivity adjustment by Teach-In programming
- Modulated, red light 660 nm , polarized
- Supply voltage: 10 to 30 VDC
- Output: 100 mA, NPN or PNP preset
- Make and break switching function programmable
- LED indication for output, stability and power ON
- Protection: reverse polarity, short circuit and transients
- Cable and plug versions
- Excellent EMC performance
- Mute function (Sensor blanking)

## Dimensions

## Installation Hints

| To avoid interference from inductive voltage / current peaks, separate the proximity switch cables from any other power cables. E.g. Engine, contactor or solenoid cables | Relief of the cable strain <br> The cable should not be pulled | Protection of the sensing face <br> A proximity switch should not serve as mechanical stop | Sensor mounted on a mobile carrier <br> Any repetitive flexing of the cable should be avoided |

## Delivery Contents

- Photoelectric switch: PD 30 CNP 06 ...
- Installation instruction
- Mountingbracket APD30-MB1
- Packaging: Cardboard box

## Accessories

- Reflector to be purchased separately
- Mounting bracket APD30-MB2 to be purchased separately

CARLO GAVAZZI

## Teach functions

## Normal operation, optimized switching point.

1. Line up the sensor with the reflector. Yellow LED and Green LED are ON
2. Press the button for 3 seconds until both LEDs flashes simultaneously.
(The first switch point is stored)
3. Place the object between the sensor and reflector in the detection zone.
4. Press the button once and the sensor is ready to operate (Green LED ON, Yellow LED ON)
(The second switch point is stored)

## For maximum sensing distance

## (default setting)

1. Line up the sensor with the reflector, place the object between the sensor and reflector in the detection zone. Yellow LED is OFF and Green LED is ON.
2. Press the button for 3 seconds until both LEDs flashes simultaneously.
(The first switch point is stored)
3. Press the button a second time and the sensor is ready to operate (Green LED ON, Yellow LED ON) (The second switch point is stored)

## For minimum sensing distance

1. Line up the sensor with the reflector. Yellow LED and Green LED are ON
2. Press the button for 3 seconds until both LEDs flashes simultaneously. (The first switch point is stored)
3. Press the button a second time and the sensor is ready to operate (Green LED ON, Yellow LED ON) (The second switch point is stored)

## For dynamic setup (running process)

1. Line up the sensor with the reflector. Green LED is ON, status on the yellow LED is not important.
2. Press the button for 3 second until both LEDs flashes simultaneously.
3. Press the button a second time for at least one second, both LED's flashes fast siultainiously and keep the button pressed for at least one process cycle, release the button and the sensor is ready to operate (The second switch point is stored)

For make or break setup (N.O. or N.C.)

1. Press the button for 10 seconds, until the green LEDs flashes.
2. While the green LED flashes, the output is inverted each time the button is pressed. Yellow LED indicates N.O. function selected

If the button is not pressed within the next 10 seconds, the current output is stored.

Push once

10 sec .
