# Solid State Relays 1-Phase, Proportional Switching Controllers Types RGS1P..AA.., RGS1P..V..

#### **Product Description**

The RGS1P is a series of solid state relays that give the possibility to control output power of 1-phase loads with an analog control input. The RGS1P is intended to be mounted on chassis or an external heatsink. phase angle control, full cycle control, advanced full cycle control specific for short wave infrared heaters and soft starting for limiting inrush current of loads having a high temperature coefficient.

Input types cover a wide range of current and voltage ranges. Local setting by an external potentiometer is possible. Switching modes, selectable through a front knob, allow The output of the RGS1P is protected against overvoltages by means of an integrated varistor across the output. Two front LEDs indicate the status of the load and control.

Specifications are at a surrounding temperature of 25°C unless otherwise specified.

- 1-pole analog switching AC solid state relays
- Selectable mode of operation:
  - Phase Angle
  - Full Cycle x1, x4, x16
- Advanced Full Cycle
- Soft Starting
- Rated operational voltage: up to 660 VAC
- Rated operational current: up to 90 AAC
- Control inputs: 4-20 mA, 0-5V, 1-5V, 0-10V, external potentiometer
- Integrated varistor protection on output
- Load ON LED indication
- 100kA short circuit current rating according to UL508

#### Ordering Key RGS 1 P 60 V 50 E D

Note:

- Control input lines must be installed together to maintain products susceptibility to Radio Frequency Interference.
- Use of AC solid state relays may according to the application and the load current, cause conducted radio interferences. Use of mains filters may be necessary for cases where the user must meet E.M.C requirements. The capacitor values given inside the filtering specification tables should be taken only as indications, the filter attenuation will depend on the final application.
- This product has been designed for Class A equipment. (External filtering may be required, refer to filtering section). Use of this product in domestic environments may cause radio interference, in which case the user may be required to employ additional mitigation methods.
- Surge tests on RGC..A models were carried out with the signal line impedence network. In case the line impedance is less than 40Ω,
- it is suggested that AC supply is provided through a secondary circuit where the short circuit limit between conductors and ground is 1500VA or less.
- A deviation of one step in the distributed full cycle models and up to 1.5% Full Scale Deviation in phase angle models is considered to be within PC1 criteria.
- Performance Criteria 1 (Performance Criteria A): No degradation of performance or loss of function is allowed when the product is operated as intended.
- Performance Criteria 2 (Performance Criteria B): During the test, degredation of performance or partial loss of function is allowed. However, when the test is complete the product should return operating as intended by itself.
- Performance Criteria 3 (Performance Criteria C): Temporary loss of function is allowed, provided the function can be restored by manual operation of the control.

### Filtering - EN/IEC 55011 Compliance

#### Compliance to Class A emission limits

#### **Filter Connection Diagram**

Note: The suggested filtering is determined by tests carried out on a representative setup and load. The RGS1P. is intended to be integrated within a system where conditions may differentiate from conditions utilised for tests, such as load, cable lengths and other auxiliary components that may exist within the end system. It shall be the responsibility of the system integrator to ensure that the system containing the above component complies with the applicable rules and regulations.

Filter manufacturer installation recomendations shall be taken in consideration when utilising such filters.

#### RGS1P..V..

Specifications are subject to change without notice (09.04.2018)

### **Switching Modes**

#### MODE 1: Phase angle switching

The Phase angle switching mode works in accordance with the phase angle control principle. The power delivered to the load is controlled by the firing of the thyristors over each half mains cycle. The firing angle depends on the input signal level that determines the ouput power to be delivered to the load.

#### Full cycle switching

In Full cycle switching modes only full cycles are being switched. Switching at zero voltage reduces EMC interference as compared to phase angle switching (mode 1). The ON full cycles are distributed over a specific time base. Compared to burst firing, this enables faster and more accurate control of the load in addition to extending the heater lifetime. This mode is suitable for use only with resistive loads.

#### MODE 2: 1x Full cycle switching

This mode offers the lowest resolution for full cycle switching, i.e., 1 full cycle. At 50% output power demand the SSR will switch ON the load for 1 full cycle and OFF for 1 full cycle in a repeated pattern. Below 50% output power demand, the non-firing period increases but the firing period remains fixed at 1 full cycle. Over 50% output power demand, the firing period increases but the non-firing period remains fixed at 1 full cycle.

Hence at 25% output power demand, the non-firing period gets longer and the SSR will switch ON the load for 1 full cycle and OFF for 3 full cycles in a repeated pattern. At 75% output power demand, the firing period is longer and the SSR will switch ON the load for 3 full cycles and OFF for 1 full cycle in a repeated pattern. At 100% output power demand, the SSR switches the load fully ON.

### **Switching Modes**

#### MODE 3: 4x Full cycle switching

#### MODE 4: 16x Full cycle switching

In **mode 3** the minimum resolution is 4 full cycles. At 50% output power demand the SSR will switch ON the load for 4 full cycles and OFF for 4 full cycles in a repeated pattern. Below 50% output power demand, the non-firing period increases but the firing period remains fixed at 4 full cycles. Over 50% output power demand, the firing period increases but the non-firing period remains fixed at 4 full cycles.

In **mode 4** the minimum resolution is 16 full cycles. At 50% output power demand the SSR will switch ON the load for 16 full cycles and OFF for 16 full cycles in a repeated pattern. Below 50% output power demand, the non-firing period increase but the firing period remains fixed at 16 full cycles. Over 50% output power demand the firing period increases but the non-firing period remains fixed at 16 full cycles.

#### MODE 5: Advanced Full Cycle (AFC) switching

This switching mode is based on the principle of distributed full cycle explained above with the difference that the resolution for firing and nonfiring periods is changed to a half mains cycle. This mode is intended for use with short / medium wave infrared heaters. The purpose of the half cycle non-firing time is to reduce the annoying visual flickering of such lamp loads.

Below 50% output power demand, the SSR switches ON the load in half cycle periods. The non-firing periods are full cycles. Above 50% output power demand, the SSR switches ON the load in full cycle periods but the non-firing periods are half cycles.

#### SOFT STARTING

Soft starting is utilised to reduce the start-up current of loads having a high cold to hot resistance ratio such as short wave infrared heaters. The thyristor firing angle is gradually increased over a time period of maximum 5 seconds (settable through an accessible potentiometer) in order to apply the voltage (and current) to the load smoothly.

Soft starting is performed on the first power up and in cases of non firing periods exceeding 5 seconds. If soft start is stopped before soft start completion, it is assumed that a start was peformed and the non firing period count start as soon as the soft start is stopped.

### **Switching Modes**

#### MODE 6: Soft start + MODE 4 (16x full cycle switching)

This switching mode works on the principle of switching mode 4 (16x full cycles) but soft starting is performed on power up or in case of the non firing periods exceeding 5 seconds. After the soft start is completed, full cycles (with a resolution of 16 full cycles) are delivered to the load according to the input signal, based on MODE 4 switching principle.

#### MODE 7: Soft start + MODE 5 (Advanced full cycle switching)

This switching mode works on the principle of the advanced full cycle (mode 5) but soft starting is performed on power up or in case of the non firing periods exceeding 5 seconds. After the soft start is completed, output power is delivered to the load according to the input signal, based on Mode 5 switching principle.

# **Connection Diagram**

### **Short Circuit Protection**

#### Protection Co-ordination, Type 1 vs Type 2:

Type 1 protection implies that after a short circuit, the device under test will no longer be in a functioning state. In type 2 co-ordination the device under test will still be functional after the short circuit. In both cases, however the short circuit has to be interrupted. The fuse between enclosure and supply shall not open. The door or cover of the enclosure shall not be blown open. There shall be no damage to conductors or terminals and the conductors shall not separate from terminals. There shall be no breakage or cracking of insulating bases to the extent that the integrity of the mounting of live parts is impaired. Discharge of parts or any risk of fire shall not occur.

The product variants listed in the table hereunder are suitable for use on a circuit capable of delivering not more than 100,000A Symmetrical Amperes, 600Volts maximum when protected by fuses. Tests at 100,000Arms were performed with Class J fuses, fast acting; please refer to the tables below for maximum ratings. Tests with Class J fuses are representative of Class CC fuses.

#### Co-ordination type 1 (UL508)

| Part No. | Short circuit current<br>[kArms] | Max. fuse<br>size [A] | Class   | Voltage [VAC] |

11. Between MCB and Load (including return path which goes back to the mains).

Note: A prospective current of 6kA and a 230/400V power supply system is assumed for the above suggested specifications. For cables with different cross section than those mentioned above please consult Carlo Gavazzi's Technical Support Group.

### **Environmental Information**

The declaration in this section is prepared in compliance with People's Republic of China Electronic Industry Standard SJ/ T11364-2014: Marking for the Restricted Use of Hazardous Substances in Electronic and Electrical Products.

| Part Name           | Toxic or Harardous Substances and Elements |                 |                 |                                    |                                   |   |
|---------------------|--|-----------------|-----------------|------------------------------------|-----------------------------------|---|
|                     | Lead<br>(Pb)                               | Mercury<br>(Hg) | Cadmium<br>(Cd) | Hexavalent<br>Chromium<br>(Cr(VI)) | Polybrominated<br>biphenyls (PBB) | Polybrominated<br>diphenyl ethers<br>(PBDE) |
| Power Unit Assembly | x  | 0               | 0               | 0                                  | 0                                 | 0   |

O: Indicates that said hazardous substance contained in homogeneous materials fot this part are below the limit requirement of GB/T 26572.

X: Indicates that said hazardous substance contained in one of the homogeneous materials used for this part is above the limit requirement of GB/T 26572.

#### 环境特性

这份申明根据中华人民共和国电子工业标准 SJ/T11364-2014:标注在电子电气产品中限定使用的有害物质

| 零件名称                               | 有毒或有害物质与元素 |           |           |                 |                |                 |  |
|------------------------------------|------------|-----------|-----------|-----------------|----------------|-----------------|--|
|                                    | 铅<br>(Pb)  | 汞<br>(Hg) | 镉<br>(Cd) | 六价铬<br>(Cr(Vl)) | 多溴化联苯<br>(PBB) | 多溴联苯醚<br>(PBDE) |  |
| 功率单元                               | Х          | 0         | 0         | 0               | 0              | 0               |  |
| O:此零件所有材料中含有的该有害物低于GB/T 26572的限定。  |            |           |           |                 |                |                 |  |
| X: 此零件某种材料中含有的该有害物高于GB/T 26572的限定。 |            |           |           |                 |                |                 |  |

#### **Accessories**

#### **Tamper Proof Accessory Kit**

### **Ordering Key**

**RGTMP** 

Tamper proof accessory kit for RGS1P, RGC1P series containing:

- x5 transparent covers - x5 secureness ties

#### Installation

1: Clip hook of the transparent cover to the bottom loop of the RGx1P control module

2: Close the cover by clipping to the top loop of the RGx1P control module

3: Secure with provided tie

### **Heatsink Selection**

#### **Heatsink Range Overview:**

http://www.productselection.net/PDF/UK/ssr\_accessories.pdf

#### **Heatsink Selector Tool:**

http://www.productselection.net/heatsink/heatsinkselector.php?LANG=UK

# **Ordering Key**

#### RHS..

- Heatsinks and fans
- 5.40°C/W to 0.12°C/W thermal resistance
- DIN, panel or thru wall mounting
- Single or multiple SSR mounting

#### **Thermal Pads**

### **Ordering Key**

#### RGHT

- Graphite thermal pad for RG series with adhesive on one side
- Width x Height x Thickness = 14 x 35 x 0.13 mm
- Packing qty. 10 pcs.

### **Thermal Paste**

### **Ordering Key**

#### HTS02S

- Silicone based thermal paste syringe
- Volume = 2ml
- Packing qty. 1 pc.

#### **Screw Kits**

# Ordering Key SRWKIT M5 X 30MM

- RGS Screw kit for mounting to heatsink Torx T20, size M5 x 30mm
- Packing qty: 20pcs.

# **X-ON Electronics**
