

# Ultrasonic Diffuse, Analogue and Digital Output Types UA18EAD.....TI

CARLO GAVAZZI

- Cylindrical M18 Stainless Steel INOX AISI 316L housing
- Sensing distance: 50-1500 mm
- Power supply: 15 to 30 VDC
- Outputs: 0-10 VDC or 4-20 mA and one switching output NPN or PNP, NO or NC.
- Linearity error 1%
- Repeatability 0.5%
- Beam angle.  $\pm 7^\circ$  or  $\pm 10^\circ$
- Protection: Short-circuit, reverse polarity and overvoltage
- Protection degree IP 67
- 2 m cable or M12 plug

## Product Description

A family of diffuse ultrasonic sensors in Stainless steel housing and with sensing range from 50-400 mm, 100-900 mm and 200-1500 with a resolution as low as 1.0 mm.

The sensor contains both an analogue and a digital output. The output is either 0-10V or 4-20 mA and the digital output NPN or PNP, NO

or NC which forms a window detection. The sensor is the ideal choice for distance measurement, level measurement, diameter measurement or loop control.

Due to use of microprocessor control the digital filtering makes the sensor immune to most electromagnetic interferences.

## Programming setup

**General set up of sensing point P1 (longest distance) and P2 (shortest distance) independently of the sensor type or function.**

- 1) Mount the sensor in the selected application.
  - 2) Place a target in front of the sensor at the maximum required distance (P1), then press shortly on the teach-button. The yellow LED switches Off and then On again after a maximum of 2 seconds. Now, the distance (P1) is saved in the sensor, and the target can be moved. I)
  - 3) Place the target at the minimum distance requested (P2), then press shortly on the teach-button. The yellow LED turns Off and then flashes 5 times. Now, the distance (P2) is saved in the sensor and the target can be moved. II)
- I) P1 can be set to maximum exceeding the family specification for the sensor by removing the target in front of the sensor. Push and hold the teach-button more than one second and the sensing distance is set at a unique distance for this sensor only. Do not use this function for an analogue output.
- II) The second switch point can be set to minimum by setting the target within the blind zone close to the sensor head or by covering the sensor head with your hand while teaching P2.

### Sensors with 1 digital output and one analogue output UA..EAD..PG/PK/NG or NK types

- 1) The factory settings are Normally Open (N.O.) for the digital output and positive slope for the analogue output.

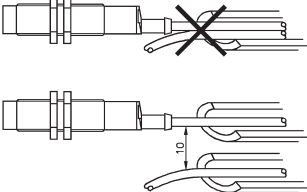

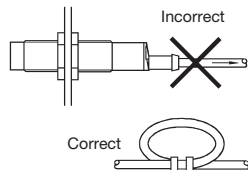

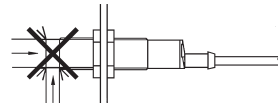

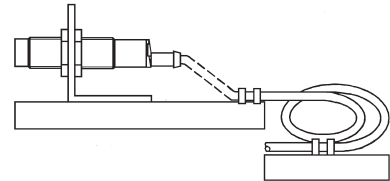

- 2) To reverse the slope to negative and reverse the N.O. output to N.C., push the teach-button for 8 seconds (12 for UC18EAD15..) until the yellow LED flashes fast. Release the teach-button and the LED will flash 5 times to acknowledge the change in function.

- 3) To switch back to positive slope or N.O. output, repeat step 2.

## Installation Hints

<p>To avoid interference from inductive voltage/current peaks, separate the prox. switch power cables from any other power cables, e.g. motor, contactor or solenoid cables</p> 	<p>Relief of cable strain</p>  <p>Incorrect</p> <p>Correct</p> <p>The cable should not be pulled</p>	<p>Protection of the sensing face</p>  <p>A proximity switch should not serve as mechanical stop</p>	<p>Switch mounted on mobile carrier</p>  <p>Any repetitive flexing of the cable should be avoided</p>
