

Ultrasonic Diffuse, Analogue and Digital Output Types UA30CAD.....TI

CARLO GAVAZZI

- Cylindrical M30 PBT housing
- Sensing distance: 250-3500 mm
- Power supply: 12 (15) to 30 VDC
- Outputs: 0-10 VDC or 4-20 mA and one switching output NPN or PNP.
- Linearity error 0.5%
- Repeatability 0.2%
- Beam angle. $\pm 6^\circ$
- Protection: Short-circuit, reverse polarity and overvoltage
- Protection degree IP 67, Nema 4X
- 2 m cable or M12 plug

Product Description

A family of diffuse ultrasonic sensors with sensing range from 250-3500 mm with a resolution as low as 2.0 mm. The sensor contains both an analogue and a digital output. The output is either 0-10V or 4-20 mA and the digital output NPN or PNP, NO or NC which forms a windows detection.

The sensor is the ideal choice for distance measurement, level measurement, diameter measurement or loop control. Due to use of microprocessor control the digital filtering makes the sensor immune to most electromagnetic interferences.

Programming setup

General set up of sensing point P1 (longest distance) and Shortest distance (P2) independent on the sensor type or function.

- 1) Mount the sensor in the selected application
- 2) Place a target in front of the sensor at the maximum required distance (P1), then press shortly on the teach-button, the Yellow LED switch Off and then On again after maximum 2 seconds. The distance (P1) is now saved in the sensor, and the target can be moved. I)
- 3) Place the target at the minimum distance requested (P2), then press shortly on the teach-button, the yellow LED turn Off then flash 5 times . The distance (P2) is now saved in the sensor and the target can be moved. II)

I) P1 can be set to a maximum exceeding the family specification for the sensor by removing the target in front of the sensor, push and hold the teach-button more than one second and the sensing distance is set at a unique distance for this sensor only. Do not use this function for an analogue output.

II) The second switch point can be set to minimum by setting the target within the blind zone close to the sensor head or by covering the sensor head with your hand while teaching P2.

Sensors with 1 digital output and one analogue output UA..CAD..PG/PK/NG or NK types

- 1) The factory setting is Normally Open N.O. for the digital output and positive slope for the analogue output.

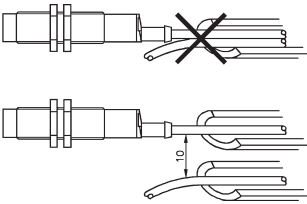

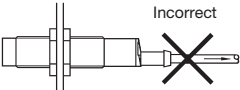

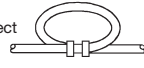

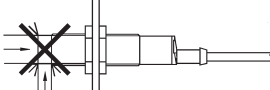

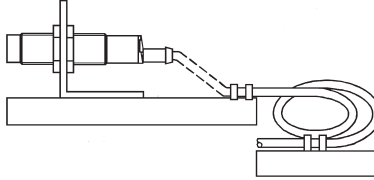

- 2) To reverse the slope to negative and reverse the N.O. output to Normally Closed N.C. Push the teach-button for 8 second until the yellow LED flash fast release the teach button and the LED will flash 5 times to acknowledge the change in function.

- 3) To switch back to positive slope or N.O. output, repeat step 2.
